2019-2022

# GEORGIA CHILD SUPPORT COMMISSION 

Honorable R. Michael Key, Chair

## Georgia Child Support Commission Report <br> December 2022

This report covers the activities of the Georgia Child Support Commission ("Commission") from January 2019 through December 2022. Specifically, for that timeframe, this report details the Commission's work and meetings, its review of Georgia’s Child Support Guidelines Statute (O.C.G.A. §19-6-15), its recommendations for proposed legislation, the extensive trainings it offered, and its work supporting Georgia's child support calculator, which it developed and maintains. This report also includes the federally and state-mandated review of Georgia's Basic Child Support Obligation Table ("BCSO Table") in light of changing economic conditions; an analysis of case data regarding child support orders and worksheets gathered through a sampling; and an economic study on the costs of raising children in Georgia. 42 U.S.C. 667; 45 C.F.R. 302.56; O.C.G.A. § 19-6-53. The content of this Report meets the Commission’s duty to ensure that the process of calculating child support is economically sound and especially that the application of the BCSO Table results in appropriate child support award amounts and that the number of deviations from the guidelines is also appropriate. See

Addendum A for the 2022 version of the Child Support Guidelines Statute, O.C.G.A. § 19-6-15. See Addendum B for the BCSO Table that is codified in the Child Support Guidelines Statute, O.C.G.A. § 19-6-15 (n) and (o).

Commission Membership. The Commission consists of fifteen members including: three superior court judges; a judge from one of Georgia's appellate courts or a designee; two members of the Georgia Senate; two members of the Georgia House of Representatives; and seven other members. O.C.G.A. § 19-6-51 (a). Generally, each member is appointed for four years, except for members of the legislature who serve until completion of their current term. O.C.G.A. § 19-6-51 (a).

The current members of the Georgia Child Support Commission are: Mr. Chuck Clay, Esq.; Superior Court Judge Lisa G. Colbert; Ms. Kathleen (Katie) Connell, Esq.; Representative Houston Gaines; Senator Emanuel J ones; J uvenile Court J udge Lisa C. Jones; Juvenile Court Judge R. Michael Key; Supreme Court Justice Shawn LaGrua; Superior Court Judge Emory Palmer; Ms. Regina Quick, Esq;; Representative Bonnie Rich; Christina Scott, J.D.; Senator Brian Strickland; Dr. Roger Tutterow; and Superior Court Judge Connie L. Williford. Judge R. Michael Key serves as Chair of the Commission.

The Commission has three standing subcommittees: (1) Statute Review Subcommittee, oo-chaired by Ms. Kathleen (Katie) Connell, Esq. and Superior Court Judge Connie L. Williford, (2) Technology \&Calculator Subcommittee, chaired by Ms. Regina Quick, Esq., and (3) Economic Subcommittee, chaired by Dr. Roger Tutterow. The current members of those subcommittees may be found on the Commission's website at:

## https:// csc.georgiacourts.gov/ wp-

## content/ uploads/ sites/ 8/2022/ 09/CSComm_MemberSubcommittees-1.pdf

The Commission is attached administratively to the Department of Human Services, but through an interagency contract, the Commission is staffed and housed at the Judicial Council/ Administrative Office of the Courts ("J C/AOC"). O.C.G.A. § 19-6-51 (c). The Staff of the Commission ("Commission staff") consists of three employees. The current Commission staff members are Elaine Johnson, Executive Program Manager, Noelle Lagueux-Alvarez, Staff Attorney, and Latoinna Lawrence, Program Coordinator.

Commission's Purpose and Mission. Pursuant to O.C.G.A. §19-6-50 et seq., the Commission is charged with collecting and studying information and data relating to awards of child support and creating a BCSO Table. The Commission is also responsible for conducting a comprehensive review of the child support guidelines, economic conditions, and all matters relevant to maintaining effective and efficient child support guidelines that will serve the best interest of Georgia's children taking into account the changing dynamics of family life. Other duties of the Child Support Commission include, but are not limited to: evaluating and considering the experiences and results in other states which utilize child support guidelines; developing or causing to be developed software and a calculator associated with the use of the BCSO Table and guidelines; developing and publishing the BCSO Table and worksheets; developing training manuals and information to educate judges, attorneys, and litigants on the use of the guidelines; collaborating with the Institute of Continuing Legal Education and the Institute of Continuing Judicial Education for the purpose of training persons who will utilize the BCSO Table and child support guidelines; and making recommendations for proposed
legislation. Federal regulations and statutes require each state to review its child support guidelines every four years. See 42 U.S.C. 667 and 45 C.F.R. 302.56. The Commission is also charged with determining the appropriateness and effectiveness of the state's guidelines at least every four years pursuant to O.C.G.A. § 19-6-53.

Commission's History in Brief. The Commission was created by the Georgia General Assembly in 2005. O.C.G.A. §19-6-50 et seq. The Commission's inaugural members were appointed by the Governor in an Executive Order dated May 9, 2005, pursuant to O.C.G.A. §19-6-51. At the same time that the Georgia General Assembly created the Georgia Child Support Commission, it also dramatically changed the method by which child support is calculated in Georgia. Specifically, through HB221, Georgia abandoned the percentage-of-payor's-income method and adopted an "income shares" methodology that was in line with the national trend. The income shares methodology forms the basis of Georgia's Child Support Guidelines Statute which is codified at O.C.G.A. 19-6-15.

The very first Commission meeting was held on June 1, 2005. At that time, the Commission procured Georgia's first Economic Study. The economists who conducted that study developed Georgia's BCSO Table, which the Commission presented to the public through a series of public hearings. The BCSO Table is the starting point for calculating child support obligations in Georgia. In other words, determining the BCSO amount is the first step in the process of calculating child support in Georgia.

The following year, during the 2006 legislative session, through SB382, the Commission proposed adopting the newly created BCSO Table, for which space had been held in
reserve awaiting its development. In that legislation, the Commission also recommended extensive revisions to the original Child Support Guidelines Statute (HB 221) based on the need for clarification. The Georgia General Assembly passed, and the Governor signed, amendments to the Child Support Guidelines Statute (SB382) in 2006, with an effective date of J anuary 1, 2007.

Between the passage of the revised Child Support Guidelines Statute and its effective date, the Commission's staff, with the assistance of the Division of Child Support Services and the State Bar of Georgia’s Family Law Section, conducted extensive training for judges, attorneys, Division of Child Support Services staff, mediators, litigants, and state librarians to help all learn the new methodology for calculating child support in Georgia. In partnership with the Division of Child Support Services, state-of-the-art worksheets and automated child support calculators were also developed.

Thefirst child support calculator was developed in Excel and released in November 2006. The Excel version was followed shortly by a web version of the calculator which was released for use in late December 2006. Unfortunately, the 2006 web-based version of the calculator was very costly to support and maintain and was eliminated in 2009. Over the years, the Excel calculator was updated annually and available for download by the courts and public, but it was apparent that an online version of the calculator was still needed when the Microsoft Corp., who owns the Excel product, began providing the product only through the iCloud. During that timeframe, the Commission was advised by technical experts to phase out the Excel calculator and to develop a web-based calculator. In 2014, the Child Support Commission began exploring options to provide a web-based calculator that would be proprietary. Commission staff worked with the Commission's

Technology and Calculator Subcommittee, and through a contract between the JC/AOC and a vendor, an online child support calculator was developed and released for public use on August 8, 2016. The Excel calculator was eliminated at the end of October 2018. Since October 2018, Georgia's only child support calculator is a web-based calculator that may be found here: https:// csconlinecalc.georgiacourts.gov/ frontend/ web/index.php.

As required every four years by federal law (42 U.S.C. 667 and 45 C.F.R. 302.56), the Commission submitted its first economic study report to the Administration of Children and Families, U.S. Department of Health and Human Services on June 30, 2006. Subsequent reports were submitted in J anuary 2011, J anuary 2015, and December 2018. All of those reports are archived on the Commission's website at: https:/ / csc.georgiacourts.gov/ business-of-the-child-support-commission/ .

2019 Ransomware Attack. On Friday, J une 28, 2019, at approximately 11:00 p.m. the JC/AOC became the victim of a ransomware attack. The attack was discovered by JC/AOC Information Technology ("J C/AOC/IT") staff on Saturday, June 29, 2019, at approximately 7:30 a.m. TheJ C/ AOC/IT department immediately contacted the Georgia Technology Authority (GTA) who brought in the National Guard, GBI, FBI, and the Multi State Information Sharing and Analysis Center, and remediation efforts began. Everything that was on the J C/ AOC network, whether affected or not by the attack, was taken down at the recommendation of the GTA, GBI, and FBI. Amazon Web Service (AWS) was brought in to establish a new cloud-based, segmented system. Fortunately, the child support calculator itself was not in an environment where it was affected but it was still taken down as a precaution. The calculator was back up and running on July 12, 2019, having been moved to an AWS Cloud-based environment. The Commission has
two websites that were then hosted by the JC/AOC-the Child Support Commission website and the Income Deduction Order website. Both websites were encrypted by the attack. In mid-to-late July, "business card" websites were deployed as a temporary solution, which gave the Commission a presence on the Internet. The Commission's staff and the J C/ AOC/IT webmaster worked for several months on the full restoration of both sites, including locating website content, such as meeting minutes, previous Economic Study Reports, training materials, and made the sites fully functional again by the end of J anuary 2020.

COVID-19 Pandemic. On March 14, 2020, Governor Brian P. Kemp signed a public health state of emergency order to address the coronavirus and COVID-19 in Georgia. On that same date, Chief J ustice Harold D. Melton, Supreme Court of Georgia, also declared a statewide judicial emergency. Commission staff communicated with Chair, J udge R. Michael Key and Commission members notifying them that meetings scheduled in March 2020 could not be held in-person. Those in-person meetings were soon cancelled by the committee chairs. Commission staff then began the process, with the help of the JC/AOC/IT department, of considering innovations in technology that would allow the Commission to conduct meetings electronically. In a short amount of time, they found new methods using Zoom and Teams to conduct virtual meetings that have proven to be efficient and convenient for Commission members and the public. The Commission continues to hold virtual and/ or hybrid meetings and that practice will likely outlast the pandemic. The pandemic forced the Commission to adapt, which it did.

Since March 2020, again to help reduce the impact of the pandemic, Commission staff created online training videos parsed into eight modules intended for use by self-
represented litigants, https:// csc.georgiacourts.gov/training/ \#TrainingforParents, that allow an opportunity to self-train in any order in which a person may want to view the videos about the child support calculator. Commission staff is pleased that many people, not just self-represented litigants, view and use these videos for training. Commission staff has also continued to produce and maintain other training materials and resources provided on the Child Support Commission website for the public and self-represented litigants to assist them in preparing their child support worksheets. Commission staff also maintains a website of resources, forms, and processes for the Income Deduction Order (IDO) process in private cases, https:// georgiacourts.gov/ido/.

## Work of the Commission, 2019-2022.

## A. Commission Meetings

During these years, the Commission conducted a total of forty-eight (48) meetings, nine (9) of which were meetings of the full Commission. The Commission also authorized three subcommittees-the Economic Subcommittee, the Statute Review Subcommittee, and the Technology \& Calculator Subcommittee. The Economic Subcommittee resumed its work in 2021 to authorize necessary activities for conducting the 2022 Economic Study required under 42 U.S.C. 667 and 45 CFR 302.56, during which that subcommittee held three (3) meetings. The Statute Review Subcommittee resumed its work in 2022 and conducted six (6) meetings concerning matters that were referred to that subcommittee. The Technology and Calculator Subcommittee resumed its work in 2022 and conducted two (2) meetings. In December 2018, the Commission authorized two study committees, the Low-Income Deviation Study Committee and the Parenting Time Deviation Study Committee, which began their work in April 2019. The Low-Income Deviation Study

Committee conducted three (3) meetings during the year 2020 and concluded its work. A recommendation from the Low-Income Deviation Study Committee resulted in the creation of a Low-Income Deviation Work Group that conducted five (5) meetings to explore ways to simplify the functionality and instructions for the low-income deviation in child support calculator based on the current statute. The Parent Time Deviation Study Committee conducted twenty (20) meetings between 2019-2022 and concluded their work.

## B. Study Committees

The purpose of the Low-Income Deviation Study Committee was to study and consider the current statutory process of including a Low-Income Deviation (O.C.G.A. 19-6-15 § (i)(2)(B)) in the calculation of child support and to discover if there is a better method of calculating this deviation that should be considered. The purpose of the Parenting Time Deviation Study Committee was to study and consider the current statutory process for accounting for parenting time (O.C.G.A. 19-6-15 § (i)(2)(K)) in the calculation of child support and to discover if there is a better method than the one currently being used that should be considered. Supporting documents, including final reports by both study committees, may be found on the Commission's website at: https:// csc.georgiacourts.gov/ business-of-the-child-support-commission/

## C. Training.

During the years 2019 through 2022, Commission staff continued training Georgia's judges, judicial staff, attorneys, mediators, Division of Child Support Services staff, and
the public on the Child Support Guidelines, child support calculator, and the resulting child support worksheets.

In 2019, Commission staff conducted fourteen trainings, including: two trainings for local ADR offices in Clayton and Cobb Counties; three trainings at the State Bar offices in Atlanta, of which one training was a full day and included one hour each of Ethics and Professionalism CLE; one unique training for a Georgia State Law School class; one training for the Office of State Administrative Hearings (OSAH) Administrative Law Judges; one training for the Fulton County Law Clerks, Family Law Center, and Law Library staff; six trainings in various locations throughout the state for lawyers and judicial staff.

In 2020, Commission staff was faced with the most unusual predicament of conducting training during a pandemic. Prior to the pandemic, Commission staff conducted routine in-person training at the State Bar Building in Atlanta in J anuary, followed by in-person training in Macon in February. Another in-person training was scheduled for April 24, 2020, in Americus, but had to be cancelled due to the pandemic. Despite these circumstances and not knowing when in-person training could resume, Commission staff developed a training script for use in conducting online training using Zoom Webinar. Commission staff then conducted five online training events between October and December that were available for one-hour of general CLE credit and/ or one hour of CE credit for registered neutrals. A total of seven trainings were conducted that year.

In 2021, Commission staff conducted a total of 21 training events. They conducted one in-person training in J anuary at the J udge's Winter Conference in Athens, which included

Commission staff gathering survey information concerning the low-income and the parenting time deviations; 12 online trainings were conducted for lawyers, judicial staff, and the public; two trainings were conducted for DCSS agents; two trainings were conducted for mediators; one training was conducted for Child Welfare Law Specialists (CWLS); one training was conducted for OSAH judges; one training was conducted for Juvenile Court J udges in Hall County; and one training was conducted for Cobb County Superior and Magistrate Court J udges.

In 2022, Commission staff continued training and conducted a total of 15 training sessions, including eight trainings for lawyers, judicial staff, and the public; four trainings for mediators coordinated through the Georgia Office of Dispute Resolution (GODR); one DCSS training on the self-employment calculator; one training for the Gwinnett County Bar Association; and one training for J uvenile CourtJ udges and staff at the Child Welfare Law Summit.

## D. Legislation.

2019 Legislative Session. The Commission's Statute Review Subcommittee, chaired by Kathleen "Katie" Connell, Esq., proposed legislation in House Bill 381 to achieve the following:

- To revise and correct defined terms and terminology, grammar, and punctuation.
- To add "or the jury" with the reference of "by the court" in various sections in the statute;
- To exclude certain adoption assistance benefits from gross income;
- To exclude that the imputation of gross income be based only on a 40-hour work week at minimum wage;

The provisions above were among those included in SB 381 during the 2019 Legislative Session, which passed the Georgia General Assembly and was signed by the Governor on May 6, 2019.

## Considerations for Proposed Legislation 2020-2022

In December 2020, the Commission received a report from its Low-Income Deviation Study Committee making recommendations and completing the work of that study committee. In April 2022, the Commission received a report from its Parenting Time Deviation Study Committee making recommendations and completing the work of that study committee. Those reports were an effort to identify and recommend to the Commission how Georgia may want to proceed legislatively to amend O.C.G.A. § 19-6-15, on these important issues. Much consideration was given to these subjects and after many meetings and much debate by the Commission, it was decided that the best course of action would be for the Commission to recommend a legislative resolution to create a joint House and Senate Legislative Study Committee on Parenting Time, and to further consider Low-Income as well. The Commission recognized theimportance of these issues and that it is of equal importance to engage and educate our legislators on these subjects prior to the Commission bringing a bill before the legislature for their full consideration. As a result, no legislation will be brought by the Commission during the 2023 legislative session to amend O.C.G.A. § 19-6-15, but a bill is anticipated to be brought by the Commission to the General Assembly during the 2024 legislative session.

## E. Maintenance of the Child Support Calculator.

Georgia currently maintains one child support calculator available on the Internet. The calculator may be accessed and utilized from the Commission's website: http:// csc.georgiacourts.gov/. The calculator is hosted in the Amazon Web Services (AWS) cloud. The former Excel child support calculator was eliminated in October 2018, but Commission staff continues to identify individuals using outdated and no-longersupported versions of the former Excel calculator. During training events, Commission staff reminds attorneys, judicial staff, and the public that Georgia has one calculator-the online calculator-and that the Excel calculator can no longer be used for any reason.

Georgia's child support calculator requires a person to set up a user account that is password protected. To create a child support worksheet a person simply enters information in fields as prompted, and the calculator automatically populates the worksheet and schedules based upon the information entered and as programmed to comply with the statute, O.C.G.A. § 19-6-15. The final calculation displays in a PDF printable form that one can file with the clerk. An advantage of this calculator over the now-defunct Excel version is that the most current version of the child support calculator and forms is always available. In other words, there are no version control issues because everyone always has the latest version available through the web.

Commission staff continues to provide training on the child support guidelines statute and the calculator with a focus on teaching attendees how to establish a user account, navigate the calculator, create newworksheets, search for saved worksheets, how to print, and how to make the worksheets available to the court. Commission staff continues to
receive feedback concerning the calculator and overall, the message is that the calculator is intuitive and easy to learn. For those who reach out for assistance, Commission staff is available and glad to assist. At the bottom of each screen in the calculator, there is a link titled, "Technical Support Issue." A person can click that link, write a message, including a description of the issue, include their contact information, and Commission staff will promptly respond.

Each year, pursuant to O.C.G.A. 19-6-15 (f)(5)(A) and O.C.G.A § 19-6-53 (a)(7), the child support calculator is updated to adjust the formula for the calculations of self-employed persons' income on Schedule B. Commission staff identify the Social Security Administration's Old-Age, Survivors, and Disability Insurance (OASDI) Taxation Limit amount, and then create the formulas to be used in the calculations on Schedule B, Line 3, of the Child Support Calculator. Commission staff works closely with the J C/ AOC/IT developers to make the necessary code changes in the calculator, test the changes, and then deploy the update during the first week of J anuary.

In October 2021, the child support calculator was transferred from the original vendor, that worked with the Commission to create the calculator, to the JC/AOC's IT Division which is now responsible for supporting and maintaining the calculator. Commission staff also continues to support the calculator by monitoring for technical issues and by addressing notices from anyone alerting Commission staff to an issue. Most often, issues raised are the result of a user error-not an actual technical issue with the calculator-for which Commission staff provides the appropriate support. Commission staff also identifies needed updates, especially when changes are made to the guideline's statute, O.C.G.A. 19-6-15. Commission staff works closely with the JC/AOC/IT developers on
resolving issues, creating code changes as needed, and maintaining the calculator with a high level of security that is continually monitored and updated when appropriate.

## Review of the Child Support Guidelines and the Basic Child Support Obligation Table, 2022.

## A. Listening Sessions

The Economic Subcommittee met in J une 2021 and discussed ways to capture public comments for the 2022 Economic Study. The Subcommittee authorized two public listening sessions to gather comments so the Commission and Subcommittee could secure information from the public on issues they may have with the guidelines and the BCSO Table. Commission staff worked closely with the J C/ AOC/IT webmaster and added a page to the Child Support Commission's website devoted to providing information about the public listening sessions and providing three ways to submit comments: (1) in writing through the website, (2) by mail, and (3) live through Zoom during a listening session. The Economic Subcommittee conducted the two listening sessions in the evenings on August 26, 2021 and September 23, 2021, which were electronically accessible through Zoom, allowing the public to attend from anywhere in the state. In addition, Commission staff summarized the spoken comments from those sessions and all the written comments that had been submitted, which were later considered by the Subcommittee and Commission. The summary of those comments was also provided to the vendor who conducted the 2022 Economic Study ensuring that the concerns of Georgia's citizens were considered.

## B. Case Sampling.

Pursuant to 42 U.S.C. 667 and 45 C.F.R. 302.56, the State must review and revise the guidelines, if appropriate, at least once every four years to ensure that their application results in the determination of appropriate child support award amounts. The State must consider economic data on the cost of raising children and analyze case data, gathered through sampling or other methods, on the application of and deviations from the guidelines. 45 C.F.R. 302.56 (e) and (h). Even though the report to the U.S. Department of Health and Human Services, Office of Child Support Enforcement is submitted by each state's child support agency, it is the duty of the Commission to conduct the required review and study, as outlined in O.C.G.A. § 19-6-53. Thus, the Economic Subcommittee of the Child Support Commission, chaired by Dr. Roger Tutterow, authorized case sampling and the analysis of case data.

In J anuary 2022, Commission staff began gathering data to assist DCSS with the federal report. In previous reviews, twelve counties were chosen through scientific means with the assistance of Commission member Dr. Roger Tutterow, a noted economist. In the 2018 case sampling, a few of the counties sampled had few or no orders entered that could be used in the study. As a result, Dr. Tutterow decided to increase the number of counties sampled from 12 to 15 and to collect sampling data from a two-month period instead of a one-month period as had been done in past studies. An additional county-representative of the metropolitan Atlanta area-was also added taking the total number of counties sampled to 16. The counties included in the 2022 case sampling were: Appling, Clayton, Early, Echols, Elbert, Fannin, Fayette, Forsyth, Glascock, Glynn, Houston, Paulding, Rockdale, Stewart, Troup, and Ware. These counties represent a cross section of the
socio-economic makeup of Georgia. A request was made to the clerk of court for each of the chosen counties to submit to Commission staff all the temporary and final child support orders and accompanying child support worksheets dispositioned in their jurisdictions during the months of September and October 2021. The cases collected from the various Clerks are referred to as "private" below.

In addition to the dispositions collected from county clerks as described above, DCSS provided 195 cases from the same 16 counties. As set forth in federal regulation, 45 CFR 302.56(h)(2), states are required to include a comparison between child support amounts as ordered versus as paid. To conduct that comparison, DCSS provided child support payment data for 187 of the 195 cases that it provided.

The Child Support Commission and Commission staff acknowledge the extraordinary efforts of Superior Court Clerks and their staff and the Department of Human Services (DHS), Division of Child Support Services (DCSS) staff and administrators in providing the case file data used in the case sampling study.

Executive Program Manager Elaine Johnson, Staff Attorney Noelle Lagueux-Alvarez, Program Coordinator Latoinna Lawrence, along with a temporary contract attorney, Janné McKamey, gathered, organized, and entered all the submitted data into an Excel spreadsheet report. Commission staff analyzed and assembled the data and Latoinna Lawrence created pivot tables based on that data. The results of the case sampling are contained within this report and a chart of the findings can be found in Addendum C.

Case Count. A total of 472 child support orders and worksheets were obtained from 16 counties that were dispositioned during the months of September and October 2021 and
were analyzed for the case sampling. A total of 277 or $59 \%$ of these orders were from private cases, such as divorces, while 195 or $41 \%$ of these orders were cases filed by the Division of Child Support Services (DCSS) that resulted in the entry of orders. The table below shows the number of private and DCSS cases included in the sample by county. A blank field in the table is equal to zero cases available for the sampling. For more details on the case count, see Addendum C.

| Count of Count of Cases | Column Labels $\checkmark$ |  |  |  |
| :--- | :---: | :---: | :---: | ---: |
| County | $\checkmark$ | DCSS | Private Grand Total |  |
| Appling | 10 | 4 | 14 |  |
| Clayton | 39 | 37 | 76 |  |
| Early | 11 | 4 | 15 |  |
| Echols |  | 1 | 1 |  |
| Elbert | 3 | 5 | 8 |  |
| Fannin | 2 | 7 | 9 |  |
| Fayette | 8 | 2 | 10 |  |
| Forsyth | 2 | 41 | 43 |  |
| Glascock | 2 | 1 | 3 |  |
| Glynn | 13 | 19 | 32 |  |
| Houston | 41 | 61 | 102 |  |
| Paulding | 23 | 35 | 58 |  |
| Rockdale | 13 | 26 | 39 |  |
| Stewart | 2 |  | 2 |  |
| Troup | 12 | 15 | 27 |  |
| Ware | 14 | 19 | 33 |  |
| Grand Total | 195 | 277 | 472 |  |

An overview analysis of some of the 2022 data elements for deviations, default orders, and imputed income follows.

1. Deviations. The total number of private cases was 277 , of which it was noted that 128 or $46 \%$ of the cases included one or more deviations in the calculation of child support, while 149 or $54 \%$ of the cases did not include any deviations in the calculation of child support. The total number of DCSS cases was 195, of which it was noted that 21 or $11 \%$ of the cases included one or more deviations in the
calculation of child support, while 1.74 or $89 \%$ of the cases did not include any deviations in the calculation of child support. Combined, there were a total of 472 cases, of which it was noted that 149 or $32 \%$ of all cases included one or more deviations in the calculation of child support. For more details, including the specific deviations used, see Addendum C.

## Deviations - Private

| Private Cases with Deviations |  |
| :--- | :--- |
| Appling | 1 |
| Clayton | 11 |
| Early | 1 |

| Total | 174 |

2. Low-Income Deviation. Eleven (11) or $2 \%$ of the total 472 orders in the case sampling included a low-income deviation for the noncustodial parent in the calculation of child support. Of this total, four orders of the 277 private cases included a low-income deviation, while seven orders of the 195 DCSS cases included a low-income deviation. For more details, including the specific deviations used, see Addendum C.

3. Default Orders. Twelve (12) or $3 \%$ of the 472 orders in the case sampling were entered by default when the noncustodial parent in the case was personally served notice to appear at a court hearing but failed to do so. Of this total, one order was entered by default in a privatecase, while 11 orders were entered by default in DCSS cases. For more details, including the specific deviations used, see Addendum C.

| Ware | 14 |  | $0.00 \%$ |
| Grand Total | 195 | 11 | $5.64 \%$ |

4. Imputed Income. It is not always possible to determine the exact income of a parent for the calculation of child support and in those situations our guidelines statute allows for the imputation of income. In the case sampling, the total number of private cases was 277 , of which it was noted that 75 or $27 \%$ of the cases included imputed income for at least one parent in the calculation of child support, while 202 or $73 \%$ of the cases did not impute income for at least one parent in the calculation of child support. The total number of DCSS cases was 195, of which it was noted that 135 or $69 \%$ of the cases imputed income for at least one parent in the calculation of child support, while 60 or $31 \%$ of the cases did not impute income for at least one parent in the calculation of child support. Combined, there were a total of 472 cases, of which it was noted that 210 or $44 \%$ of all cases included the imputation of income for a parent in the entry of an order. For more details on imputed income, see Addendum C.

C. Economic Study.

The J C/AOC, at the request of the Child Support Commission, contracted with Dr. J ane Venohr with the Center for Policy Research, Inc. ("CPR"), in Denver, Colorado, for a formal economic assessment of the guidelines statute and Georgia's BCSO Table. The assessment considered the economic data on the costs of raising children and other economic factors used to develop a BCSO Table. (The term "Table" is written as "Schedule" in the CPR report.) Commission staff gathered, assessed, and organized the case sampling data that was furnished to CPR for the study.

Dr. Venohr's report explains Georgia's current schedule is "based on the most current economic data that was available in 2005, which relied on 2005 price levels, federal and state income tax rates and FICA." The 2005-2006 table was based on the average of two measurements of child-rearing expenditures: one based on the Betson-Rothbarth Methodology ("Rothbart") and the other based on the Betson-Engle Methodology ("Engle"). In the 2022 economic study, Dr. Venohr included new Engel estimates from
the years 2013-2019 that were developed by Dr. David Betson. She also considered measurements of child-rearing expenditures estimated from three different methodologies: the Rothbarth methodology; the Engel methodology; and the USDA methodology. In addition to current economic evidence on child-rearing expenditures, the 2022 study considers changes in price levels and changes in federal and state tax and FICA rates. See Addendum D for Dr. Venohr's report titled, "Review of the Georgia Child Support Guidelines," dated November 1, 2022, hereinafter referred to as the "2022 Report". The 2022 Report fulfills the federal regulation that states review their guidelines, including requiring states to consider the economic data on the costs of raising children.
D. Child Support Commission's Review of the 2022 Economic Study.

While working to finalize the 2022 Economic Study Report, Dr. Venohr made two presentations to the Commission the first on August 19, 2022 and the second on September 30, 2022. During those meetings, Commission members engaged with Dr. Venohr and asked questions about the content of the draft report. On October 11, 2022, Dr. Venohr furnished the first draft of the 2022 Report, which was reviewed by the Economic Subcommittee during their meeting on October 19, 2022. The Subcommittee approved the content of that report with the understanding that Commission staff were working with Dr. Venohr to correct grammatical, punctuation, and pagination errors in that report.

Afinal version of the 2022 Report dated November 1, 2022, was received from Dr. Venohr and provided to the Commission members for their review and discussion during their

November 4, 2022 meeting. During that meeting, Dr. Tutterow noted for the Commission the Economic Subcommittee's recommendation that the BCSO table be extended so that the highest amount of the parents' monthly adjusted gross income be increased to \$40,000, up from the current \$30,000. The Economic Subcommittee has taken the 2022 Report under advisement and both the Subcommittee and Commission will further consider the findings and suggestions contained in that report, including four updated Child Support Obligation Tables suggested by Dr. Venohr for Georgia’s consideration. See Addendum E.

## The signature page follows.

The Child Support Commission wishes to thank the Honorable Governor Brian P. Kemp for the opportunity to serve the children and families of Georgia. The Commission is committed to continuing to carry out its duties as it works to review, update, and monitor any issues involving the child support guidelines. On behalf of the members of the Georgia Child Support Commission, this report is submitted along with all supporting documents for consideration by the Georgia General Assembly and the Governor.

Dated this 30th day of December, 2022.

## R. Michael KCS

Judge R. Michael Key
Chair, Child Support Commission

Staff Attorney, Child Support Commission

## SECTION II

## Addendum A

2022 Version of Georgia's Child Support Guidelines Statute, O.C.G.A. §19-6-15

## O.C.G.A. § 19-6-15

## Current through the 2022 Regular Session of the General Assembly.

19-6-15. Child support guidelines for determining amount of award; continuation of duty of support; duration of support.

## (a) Definitions.

As used in this Code section, the term:
(1) Reserved.
(2) "Adjusted income" means the determination of a parent's monthly income, calculated by deducting from that parent's monthly gross income one-half of the amount of any applicable self-employment taxes being paid by the parent, any preexisting order for current child support which is being paid by the parent, and any theoretical child support order for other qualified children, if allowed by the court. For further reference see paragraph (5) of subsection (f) of this Code section.
(3) "Basic child support obligation" means the monthly amount of support displayed on the child support obligation table which corresponds to the combined adjusted income and the number of children for whom child support is being determined.
(4) Reserved.
(5) Reserved.
(6) "Child support obligation table" means the chart set forth in subsection (o) of this Code section.
(6.1) "Child support services" means the entity within the Department of Human Services and its contractors that are authorized to enforce a duty of support.
(7) "Combined adjusted income" means the amount of adjusted income of the custodial parent added to the amount of adjusted income of the noncustodial parent.
(8) "Court" means a judge of any court of record or an administrative law judge of the Office of State Administrative Hearings.
(9) "Custodial parent" means the parent with whom the child resides more than 50 percent of the time. When a custodial parent has not been designated or when a child resides with both parents an equal amount of time, the court shall designate the custodial parent as the parent with the lesser support obligation and the other parent as the noncustodial parent. When the child resides equally with both parents and neither parent can be determined as owing a greater amount than the other, the court shall determine which parent to designate as the custodial parent for the purpose of this Code section.
(10) "Deviation" means an increase or decrease from the presumptive amount of child support if the presumed order is rebutted by evidence and the required findings of fact are made by the court or the jury pursuant to subsection (i) of this Code section.
(11) "Final child support amount" means the presumptive amount of child support adjusted by any deviations.
(12) "Gross income" means all income to be included in the calculation of child support as set forth in subsection (f) of this Code section.
(13) "Health insurance" means any general health or medical policy. For further reference see paragraph (2) of subsection (h) of this Code section.
(14) "Noncustodial parent" means the parent with whom the child resides less than 50 percent of the time or the parent who has the greater payment obligation for child support. When the child resides equally with both parents and neither parent can be determined as owing a lesser amount than the other, the court shall determine which parent to designate as the noncustodial parent for the purpose of this Code section.
(15) "Nonparent custodian" means an individual who has been granted legal custody of a child, or an individual who has a legal right to seek, modify, or enforce a child support order.
(16) "Parent" means a person who owes a child a duty of support pursuant to Code Section 19-7-2.
(17) "Parenting time deviation" means a deviation allowed for the noncustodial parent based upon the noncustodial parent's court ordered visitation with the child. For further reference see subsections (g) and (i) of this Code section.
(18) "Preexisting order" means:
(A) An order in another case that requires a parent to make child support payments for another child, which child support the parent is actually paying, as evidenced by documentation as provided in division (f)(5)(B)(iii) of this Code section; and
(B) That the date and time of filing with the clerk of court of the initial order for each such other case is earlier than the date and time of filing with the clerk of court of the initial order in the case immediately before the court, regardless of the age of any child in any of the cases.
(19) "Presumptive amount of child support" means the basic child support obligation including health insurance and work related child care costs.
(20) "Qualified child" or "qualified children" means any child:
(A) For whom the parent is legally responsible and in whose home the child resides;
(B) Who the parent is actually supporting;
(C) Who is not subject to a preexisting order; and
(D) Who is not before the court to set, modify, or enforce support in the case immediately under consideration.

Qualified children shall not include stepchildren or other minors in the home who the parent has no legal obligation to support.
(21) "Split parenting" can occur in a child support case only if there are two or more children of the same parents, when one parent is the custodial parent for at least one child of the parents, and the other parent is the custodial parent for at least one other child of the parents. In a split parenting case, each parent is the custodial parent of any child spending more than 50 percent of the time with that parent and is the noncustodial parent of any child spending more than 50 percent of the time with the other parent. A split parenting situation shall have two custodial parents and two noncustodial parents, but no child shall have more than one custodial parent or noncustodial parent.
(22) "Theoretical child support order" means a hypothetical child support order for qualified children as calculated in subparagraph (f)(5)(C) of this Code section which allows the court to determine the amount of child support as if a child support order existed.
(23) "Uninsured health care expenses" means a child's uninsured medical expenses including, but not limited to, health insurance copayments, deductibles, and such other costs as are reasonably necessary for orthodontia, dental treatment, asthma treatments, physical therapy, vision care, and any acute or
chronic medical or health problem or mental health illness, including counseling and other medical or mental health expenses, that are not covered by insurance. For further reference see paragraph (3) of subsection (h) of this Code section.
(24) "Work related child care costs" means expenses for the care of the child for whom support is being determined which are due to employment of either parent. In an appropriate case, the court may consider the child care costs associated with a parent's job search or the training or education of a parent necessary to obtain a job or enhance earning potential, not to exceed a reasonable time as determined by the court, if the parent proves by a preponderance of the evidence that the job search, job training, or education will benefit the child being supported. The term shall be projected for the next consecutive 12 months and averaged to obtain a monthly amount. For further reference see paragraph (1) of subsection (h) of this Code section.
(25) "Worksheet" or "child support worksheet" means the document used to record information necessary to determine and calculate monthly child support. For further reference see subsection (m) of this Code section.

## (a.1)

(1) As used in this chapter, the term "child" means child or children, including any unborn child with a detectable human heartbeat as such terms are defined in Code Section 1-2-1.
(2) Notwithstanding any provision of this Code section to the contrary, the maximum amount of support which the court may impose on the father of an unborn child under this Code section shall be the amount of direct medical and pregnancy related expenses of the mother of the unborn child. After birth, the provisions of this Code section shall apply in full.

## (b) Process of calculating child support.

Pursuant to this Code section, the determination of monthly child support shall be calculated as follows:
(1) Determine the monthly gross income of both the custodial parent and the noncustodial parent. Gross income may include imputed income, if applicable. The determination of monthly gross income shall be entered on the Child Support Schedule A - Gross Income;
(2) Adjust each parent's monthly gross income by deducting the following from the parents' monthly gross income and entering it on the Child Support Schedule B Adjusted Income if any of the following apply:
(A) One-half of the amount of self-employment taxes;
(B) Preexisting orders; and
(C) Theoretical child support order for qualified children, if allowed by the court;
(3) Add each parent's adjusted income together;
(4) Locate the basic child support obligation by referring to the child support obligation table. Using the figure closest to the amount of the combined adjusted income, locate the amount of the basic child support obligation. If the combined adjusted income falls between the amounts shown in the table, then the basic child support obligation shall be based on the income bracket most closely matched to the combined adjusted income. The basic child support obligation amount stated in subsection (o) of this Code section shall be rebuttably presumed to be the appropriate amount of child support to be provided by the custodial parent and the noncustodial parent prior to consideration of health insurance, work related child care costs, and deviations;
(5) Calculate the pro rata share of the basic child support obligation for the custodial parent and the noncustodial parent by dividing the combined adjusted income into each parent's adjusted income to arrive at each parent's pro rata percentage of the basic child support obligation;
(6) Find the adjusted child support obligation amount by adding the additional expenses of the costs of health insurance and work related child care costs, prorating such expenses in accordance with each parent's pro rata share of the obligation and adding such expenses to the pro rata share of the basic child support obligation. The monthly cost of health insurance premiums and work related child care costs shall be entered on the Child Support Schedule D Additional Expenses. The pro rata share of the monthly basic child support obligation and the pro rata share of the combined additional expenses shall be added together to create the monthly adjusted child support obligation;
(7) Determine the amount of child support for the custodial parent and the noncustodial parent resulting in a monthly sum certain payment due to the custodial parent by assigning or deducting credit for actual payments for health insurance and work related child care costs from the basic child support obligation;
(8) In accordance with subsection (i) of this Code section, deviations subtracted from or added to the presumptive amount of child support shall be applied, if applicable, and if supported by the required findings of fact and application of the best interest of the child standard. The proposed deviations shall be entered on the Child Support Schedule E - Deviations. In the court's or the jury's discretion, deviations may include, but shall not be limited to, the following:
(A) High income;
(B) Low income;
(C) Other health related insurance;
(D) Life insurance;
(E) Child and dependent care tax credit;
(F) Travel expenses;
(G) Alimony;
(H) Mortgage;
(I) Permanency plan or foster care plan;
(J) Extraordinary expenses;
(K) Parenting time; and
(L) Nonspecific deviations;
(9) Any benefits which the child receives under Title II of the federal Social Security Act shall be applied against the final child support amount. The final child support amount for each parent shall be entered on the child support worksheet, together with the information from each of the utilized schedules;
(10) The parents shall allocate the uninsured health care expenses which shall be based on the pro rata responsibility of the parents or as otherwise ordered by the court. Each parent's pro rata responsibility for uninsured health care expenses shall be entered on the child support worksheet;
(11) In a split parenting case, there shall be a separate calculation and final order for each parent; and
(12) When there is more than one child for whom support is being determined, the court shall establish the amount of support and the duration of such support in accordance with subsection (e) of this Code section. When, within two years of a final order being entered, there is a likelihood that a child will become ineligible to receive support, the court may allow for the use of separate worksheets. Separate worksheets shall show the final child support amount to be paid for all such children and the adjusted amount of support to be paid as each child becomes ineligible to receive support during such two-year period. Such worksheets shall be attached to the final order. Such order shall contain findings as required by law. A final order entered pursuant to this paragraph shall not preclude a petition for modification.

## (c) Applicability and required findings.

(1) The child support guidelines contained in this Code section are a minimum basis for determining the amount of child support and shall apply as a rebuttable presumption in all legal proceedings involving the child support responsibility of a parent. This Code section shall be used when the court enters a temporary or permanent child support order in a contested or noncontested hearing or order in a civil action filed pursuant to Code Section 19-13-4. The rebuttable presumptive amount of child support provided by this Code section may be increased or
decreased according to the best interest of the child for whom support is being considered, the circumstances of the parties, the grounds for deviation set forth in subsection (i) of this Code section, and to achieve the state policy of affording to children of unmarried parents, to the extent possible, the same economic standard of living enjoyed by children living in intact families consisting of parents with similar financial means.
(2) The provisions of this Code section shall not apply with respect to any divorce case in which there are no minor children, except to the limited extent authorized by subsection (e) of this Code section. In the final judgment or decree in a divorce case in which there are minor children, or in other cases which are governed by the provisions of this Code section, the court shall:
(A) Specify in what sum certain amount, the duration of such support, and from which parent the child is entitled to permanent support as determined by use of the worksheet or multiple worksheets when there is more than one minor child;
(B) Specify in what manner, how often, to whom, and until when the support shall be paid;
(C) Include a written finding of each parent's gross income as determined by the court or the jury;
(D) Determine whether health insurance for the child involved is reasonably available at a reasonable cost to either parent. If the health insurance is reasonably available at a reasonable cost to the parent, then the court shall order that the child be covered under such health insurance;
(E) Include written findings of fact as to whether one or more of the deviations allowed under this Code section are applicable, and if one or more such deviations are applicable as determined by the court or the jury, the written findings of fact shall further set forth:
(i) The reasons the court or the jury deviated from the presumptive amount of child support;
(ii) The amount of child support that would have been required under this Code section if the presumptive amount of child support had not been rebutted; and
(iii) A finding that states how the court's or the jury's application of the child support guidelines would be unjust or inappropriate considering the relative ability of each parent to provide support and how the best interest of the child who is subject to the child support determination is served by deviation from the presumptive amount of child support;
(F) Specify the amount of the noncustodial parent's parenting time as set forth in the order of visitation;
(G) Include a written finding regarding the use of benefits received under Title II of the federal Social Security Act in the calculation of the amount of child support; and
(H) Specify the percentage of uninsured health care expenses for which each parent shall be responsible.
(3) When child support is ordered, the party who is required to pay the child support shall not be liable to third persons for necessaries furnished to the child embraced in the judgment or decree.
(4) In all cases, the parties shall submit to the court their worksheets and schedules and the presence or absence of other factors to be considered by the court or the jury pursuant to the provisions of this Code section.
(5) In any case in which the gross income of the custodial parent and the noncustodial parent is determined by a jury, the court shall charge the provisions of this Code section applicable to the determination of gross income. The jury shall be required to return a special interrogatory determining gross income. The court
shall determine adjusted income, health insurance costs, and work related child care costs. Based upon the jury's verdict as to gross income, the court shall determine the presumptive amount of child support in accordance with the provisions of this Code section. The court shall inform the jury of the presumptive amount of child support and the identity of the custodial and noncustodial parents. In the final instructions to the jury, the court shall charge the provisions of this Code section applicable to the determination of deviations and the jury shall be required to return a special interrogatory as to deviations and the final award of child support. The court shall include its findings and the jury's verdict on the child support worksheet in accordance with this Code section and Code Section 19-5-12.
(6) Nothing contained within this Code section shall prevent the parties from entering into an enforceable agreement contrary to the presumptive amount of child support which may be made the order of the court pursuant to review by the court of the adequacy of the child support amounts negotiated by the parties, including the provision for medical expenses and health insurance; provided, however, that if the agreement negotiated by the parties does not comply with the provisions contained in this Code section and does not contain findings of fact as required to support a deviation, the court shall reject such agreement.
(7) In any case filed pursuant to Chapter 11 of this title, relating to the "Child Support Recovery Act," the "Uniform Reciprocal Enforcement of Support Act," or the "Uniform Interstate Family Support Act," the court shall make all determinations of fact, including gross income and deviations, and a jury shall not hear any issue related to such cases.

## (d) Nature of guidelines; court's discretion.

In the event of a hearing or trial on the issue of child support, the guidelines enumerated in this Code section are intended by the General Assembly to be guidelines only and any court so applying such guidelines shall not abrogate its responsibility in making the final determination of child support based on the evidence presented to it at the time of the hearing or trial. A court's final determination of child support shall take into account the obligor's earnings,
income, and other evidence of the obligor's ability to pay. The court or the jury shall also consider the basic subsistence needs of the parents and the child for whom support is to be provided.

## (e) Duration of child support responsibility.

The duty to provide support for a minor child shall continue until the child reaches the age of majority, dies, marries, or becomes emancipated, whichever first occurs; provided, however, that, in any temporary, final, or modified order for child support with respect to any proceeding for divorce, separate maintenance, legitimacy, or paternity entered on or after July 1,1992 , the court, in the exercise of sound discretion, may direct either or both parents to provide financial assistance to a child who has not previously married or become emancipated, who is enrolled in and attending a secondary school, and who has attained the age of majority before completing his or her secondary school education, provided that such financial assistance shall not be required after a child attains 20 years of age. The provisions for child support provided in this subsection may be enforced by either parent, by any nonparent custodian, by a guardian appointed to receive child support for the child for whose benefit the child support is ordered, or by the child for whose benefit the child support is ordered.

## (f) Gross income.

(1) Inclusion to gross income.

## (A) Attributable income.

Gross income of each parent shall be determined in the process of setting the presumptive amount of child support and shall include all income from any source, before deductions for taxes and other deductions such as preexisting orders for child support and credits for other qualified children, whether earned or unearned, and includes, but is not limited to, the following:
(i) Salaries;
(ii) Commissions, fees, and tips;
(iii) Income from self-employment;
(iv) Bonuses;
(v) Overtime payments;
(vi) Severance pay;
(vii) Recurring income from pensions or retirement plans, including, but not limited to, United States Department of Veterans Affairs, Railroad Retirement Board, Keoghs, and individual retirement accounts;
(viii) Interest income;
(ix) Dividend income;
(x) Trust income;
(xi) Income from annuities;
(xii) Capital gains;
(xiii) Disability or retirement benefits that are received from the Social Security Administration pursuant to Title II of the federal Social Security Act;
(xiv) Disability benefits that are received pursuant to the federal Veterans' Benefits Act of 2010, 38 U.S.C. Section 101, et seq.;
(xv) Workers' compensation benefits, whether temporary or permanent;
(xvi) Unemployment insurance benefits;
(xvii) Judgments recovered for personal injuries and awards from other civil actions;
(xviii) Gifts that consist of cash or other liquid instruments, or which can be converted to cash;
(xix) Prizes;
(xx) Lottery winnings;
(xxi) Alimony or maintenance received from persons other than parties to the proceeding before the court;
(xxii) Assets which are used for the support of the family; and
(xxiii) Other income.

## (B) Self-employment income.

Income from self-employment includes income from, but not limited to, business operations, work as an independent contractor or consultant, sales of goods or services, and rental properties, less ordinary and reasonable expenses necessary to produce such income. Income from self-employment, rent, royalties,
proprietorship of a business, or joint ownership of a partnership, limited liability company, or closely held corporation is defined as gross receipts minus ordinary and reasonable expenses required for self-employment or business operations. Ordinary and reasonable expenses of self-employment or business operations necessary to produce income do not include:
(i) Excessive promotional, travel, vehicle, or personal living expenses, depreciation on equipment, or costs of operation of home offices; or
(ii) Amounts allowable by the Internal Revenue Service for the accelerated component of depreciation expenses, investment tax credits, or any other business expenses determined by the court or the jury to be inappropriate for determining gross income.

In general, income and expenses from self-employment or operation of a business should be carefully reviewed by the court or the jury to determine an appropriate level of gross income available to the parent to satisfy a child support obligation. Generally, this amount will differ from a determination of business income for tax purposes.
(C) Fringe benefits. Fringe benefits for inclusion as income or "in kind" remuneration received by a parent in the course of employment, or operation of a trade or business, shall be counted as income if the benefits significantly reduce personal living expenses. Such fringe benefits might include, but are not limited to, use of a company car, housing, or room and board. Fringe benefits shall not include employee benefits that are typically added to the salary, wage, or other compensation that a parent may receive as a standard added benefit, including, but not limited to, employer paid portions of health insurance premiums or employer contributions to a retirement or pension plan.
(D) Variable income. Variable income such as commissions, bonuses, overtime pay, military bonuses, and dividends shall be averaged by the court or the jury over a reasonable period of time consistent with the circumstances of the case and added to a parent's fixed salary or wages to determine gross income. When income is
received on an irregular, nonrecurring, or one-time basis, the court or the jury may, but is not required to, average or prorate the income over a reasonable specified period of time or require the parent to pay as a one-time support amount a percentage of his or her nonrecurring income, taking into consideration the percentage of recurring income of that parent.
(E) Military compensation and allowances. Income for a parent who is an active duty member of the regular or reserve component of the United States armed forces, the United States Coast Guard, the merchant marine of the United States, the commissioned corps of the Public Health Service or the National Oceanic and Atmospheric Administration, the National Guard, or the Air National Guard shall include:
(i) Base pay;
(ii) Drill pay;
(iii) Basic allowance for subsistence, whether paid directly to the parent or received in-kind; and
(iv) Basic allowance for housing, whether paid directly to the parent or received inkind, determined at the parent's pay grade at the without dependent rate, but shall include only so much of the allowance that is not attributable to area variable housing costs.

Except as determined by the court or the jury, special pay or incentive pay, allowances for clothing or family separation, and reimbursed expenses related to the parent's assignment to a high cost of living location shall not be considered income for the purpose of determining gross income.
(2) Exclusions from gross income. Excluded from gross income are the following:
(A) Child support payments received by either parent for the benefit of a child of another relationship;
(B) Benefits received from means-tested public assistance programs such as, but not limited to:
(i) PeachCare for Kids Program, Temporary Assistance for Needy Families Program, or similar programs in other states or territories under Title IV-A of the federal Social Security Act;
(ii) Food stamps or the value of food assistance provided by way of electronic benefits transfer procedures by the Department of Human Services;
(iii) Supplemental security income received under Title XVI of the federal Social Security Act;
(iv) Benefits received under Section 402(d) of the federal Social Security Act for disabled adult children of deceased disabled workers; and
(v) Low-income heating and energy assistance program payments;
(C) Foster care payments paid by the Department of Human Services or a licensed child-placing agency for providing foster care to a foster child in the custody of the Department of Human Services;
(D) A nonparent custodian's gross income; and
(E) Benefits received under Title IV-B or IV-E of the federal Social Security Act and state funding associated therewith for adoption assistance.

## (3) Social Security benefits.

(A) Benefits received under Title II of the federal Social Security Act by a child on the obligor's account shall be counted as child support payments and shall be applied against the final child support amount to be paid by the obligor for the child.
(B) After calculating the obligor's monthly gross income, including the countable social security benefits as specified in division (1)(A)(xiii) of this subsection, and after calculating the amount of child support, if the presumptive amount of child
support, as increased or decreased by deviations, is greater than the social security benefits paid on behalf of the child on the obligor's account, the obligor shall be required to pay the amount exceeding the social security benefit as part of the final order in the case.
(C) After calculating the obligor's monthly gross income, including the countable social security benefits as specified in division (1)(A)(xiii) of this subsection, and after calculating the amount of child support, if the presumptive amount of child support, as increased or decreased by deviations, is equal to or less than the social security benefits paid to the nonparent custodian or custodial parent on behalf of the child on the obligor's account, the child support responsibility of that parent shall have been met and no further child support shall be paid.
(D) Any benefit amounts under Title II of the federal Social Security Act as determined by the Social Security Administration sent to the nonparent custodian or custodial parent by the Social Security Administration for the child's benefit which are greater than the final child support amount shall be retained by the nonparent custodian or custodial parent for the child's benefit and shall not be used as a reason for decreasing the final child support amount or reducing arrearages.

## (4) Reliable evidence of income.

(A) Imputed income. When establishing the amount of child support, if a parent fails to produce reliable evidence of income, such as tax returns for prior years, check stubs, or other information for determining current ability to pay child support or ability to pay child support in prior years, and the court or the jury has no other reliable evidence of the parent's income or income potential, gross income for the current year may be imputed. When imputing income, the court or the jury shall take into account the specific circumstances of the parent to the extent known, including such factors as the parent's assets, residence, employment and earnings history, job skills, educational attainment, literacy, age, health, criminal record and other employment barriers, and record of seeking work, as well as the local job market, the availability of employers willing to hire the parent, prevailing
earnings level in the local community, and other relevant background factors in the case. If a parent is incarcerated, the court or the jury shall not assume an ability for earning capacity based upon pre-incarceration wages or other employment related income, but income may be imputed based upon the actual income and assets available to such incarcerated parent.
(B) Modification. When cases with established orders are reviewed for modification and a parent fails to produce reliable evidence of income, such as tax returns for prior years, check stubs, or other information for determining current ability to pay child support or ability to pay child support in prior years, and the court or the jury has no other reliable evidence of such parent's income or income potential, the court or the jury may impute income as set forth in subparagraph (A) of this paragraph, or may increase the child support of the parent failing or refusing to produce evidence of income by an increment of at least 10 percent per year of such parent's gross income for each year since the final order was entered or last modified and shall calculate the basic child support obligation using the increased amount as such parent's gross income.
(C) Rehearing. If income is imputed pursuant to subparagraph (A) of this paragraph, the party believing the income of the other party is higher than the amount imputed may provide within 90 days, upon motion to the court, evidence necessary to determine the appropriate amount of child support based upon reliable evidence. A hearing shall be scheduled after the motion is filed. The court may increase, decrease, or leave unchanged the amount of current child support from the date of filing of either parent's initial filing or motion for reconsideration. While the motion for reconsideration is pending, the obligor shall be responsible for the amount of child support originally ordered. Arrearages entered in the original child support order based upon imputed income shall not be forgiven. When there is reliable evidence to support a motion for reconsideration of the amount of income imputed, the party seeking reconsideration shall not be required to prove the existence of grounds for modification of an order pursuant to subsection (k) of this Code section.
(D) Willful or voluntary unemployment or underemployment. In determining whether a parent is willfully or voluntarily unemployed or underemployed, the court or the jury shall ascertain the reasons for the parent's occupational choices and assess the reasonableness of these choices in light of the parent's responsibility to support his or her child and whether such choices benefit the child. A determination of willful or voluntary unemployment or underemployment shall not be limited to occupational choices motivated only by an intent to avoid or reduce the payment of child support but can be based on any intentional choice or act that affects a parent's income. A determination of willful or voluntary unemployment or underemployment shall not be made when an individual's incarceration prevents employment. In determining willful or voluntary unemployment or underemployment, the court or the jury may examine whether there is a substantial likelihood that the parent could, with reasonable effort, apply his or her education, skills, or training to produce income. Specific factors for the court or the jury to consider when determining willful or voluntary unemployment or underemployment include, but are not limited to:
(i) The parent's past and present employment;
(ii) The parent's education and training;
(iii) Whether unemployment or underemployment for the purpose of pursuing additional training or education is reasonable in light of the parent's responsibility to support his or her child and, to this end, whether the training or education may ultimately benefit the child in the case immediately under consideration by increasing the parent's level of support for that child in the future;
(iv) A parent's ownership of valuable assets and resources, such as an expensive home or automobile, that appear inappropriate or unreasonable for the income claimed by the parent;
(v) The parent's own health and ability to work outside the home; and
(vi) The parent's role as caretaker of a child of that parent, a disabled or seriously ill child of that parent, or a disabled or seriously ill adult child of that parent, or any other disabled or seriously ill relative for whom that parent has assumed the role of caretaker, which eliminates or substantially reduces the parent's ability to work outside the home, and the need of that parent to continue in the role of caretaker in the future. When considering the income potential of a parent whose work experience is limited due to the caretaker role of that parent, the court or the jury shall consider the following factors:
(I) Whether the parent acted in the role of full-time caretaker immediately prior to separation by the married parties or prior to the divorce or annulment of the marriage or dissolution of another relationship in which the parent was a full-time caretaker;
(II) The length of time the parent staying at home has remained out of the work force for this purpose;
(III) The parent's education, training, and ability to work; and
(IV) Whether the parent is caring for a child who is four years of age or younger. If the court or the jury determines that a parent is willfully or voluntarily unemployed or underemployed, child support shall be calculated based on a determination of earning capacity, as evidenced by educational level or previous work experience. In the absence of any other reliable evidence, income may be imputed to the parent as provided for in subparagraph (f)(4)(A) of this Code section.

A determination of willful and voluntary unemployment or underemployment shall not be made when an individual is activated from the National Guard or other armed forces unit or enlists or is drafted for full-time service in the armed forces of the United States.

## (5) Adjustments to gross income.

(A) Self-employment. One-half of the self-employment and Medicare taxes shall be calculated as follows:
(i) Six and two-tenths percent of self-employment income up to the maximum amount to which federal old age, survivors, and disability insurance (OASDI) applies; plus
(ii) One and forty-five one-hundredths of a percent of self-employment income for Medicare
and this amount shall be deducted from a self-employed parent's monthly gross income.
(B) Preexisting orders. An adjustment to the parent's monthly gross income shall be made on the Child Support Schedule B - Adjusted Income for current preexisting orders for a period of not less than 12 months immediately prior to the date of the hearing or such period that an order has been in effect if less than 12 months prior to the date of the hearing before the court to set, modify, or enforce child support.
(i) In calculating the adjustment for preexisting orders, the court shall include only those preexisting orders meeting the criteria set forth in subparagraph (a)(18)(B) of this Code section;
(ii) The priority for preexisting orders shall be determined by the date and time of filing with the clerk of court of the initial order in each case. Subsequent modifications of the initial support order shall not affect the priority position established by the date and time of the initial order. In any modification proceeding, the court rendering the decision shall make a specific finding of the date, and time if known, of the initial order of the case;
(iii) Adjustments shall be allowed for current preexisting support only to the extent that the payments are actually being paid as evidenced by documentation including, but not limited to, payment history from a court clerk, the child support
services' computer data base, the child support payment history, or canceled checks or other written proof of payments paid directly to the other parent. The maximum credit allowed for a preexisting order is an average of the amount of current support actually paid under the preexisting order over the past 12 months prior to the hearing date;
(iv) All preexisting orders shall be entered on the Child Support Schedule B Adjusted Income for the purpose of calculating the total amount of the credit to be included on the child support worksheet; and
(v) Payments being made by a parent on any arrearages shall not be considered payments on preexisting orders or subsequent orders and shall not be used as a basis for reducing gross income.
(C) Theoretical child support orders. In addition to the adjustments to monthly gross income for self-employment taxes provided in subparagraph (A) of this paragraph and for preexisting orders provided in subparagraph (B) of this paragraph, credits for either parent's other qualified child living in the parent's home for whom the parent owes a legal duty of support may be considered by the court for the purpose of reducing the parent's gross income. To consider a parent's other qualified children for determining the theoretical child support order, a parent shall present documentary evidence of the parent-child relationship to the court. Adjustments to income pursuant to this subparagraph may be considered in such circumstances in which the failure to consider a qualified child would cause substantial hardship to the parent; provided, however, that such consideration of an adjustment shall be based upon the best interest of the child for whom child support is being awarded. If the court, in its discretion, decides to apply the qualified child adjustment, the basic child support obligation of the parent for the number of other qualified children living with such parent shall be determined based upon that parent's monthly gross income. Except for self-employment taxes paid, no other amounts shall be subtracted from the parent's monthly gross income when calculating a theoretical child support order under this subparagraph. The basic child support obligation for such parent shall be multiplied by 75 percent
and the resulting amount shall be subtracted from such parent's monthly gross income and entered on the Child Support Schedule B - Adjusted Income.
(D) Multiple family situations. In multiple family situations, the priority of adjustments to a parent's monthly gross income shall be calculated in the following order:
(i) Preexisting orders according to the date and time of the initial order as set forth in subparagraph (B) of this paragraph; and
(ii) Application of any credit for a parent's other qualified children using the procedure set forth in subparagraph (C) of this paragraph.
(g) Parenting time deviation. The court or the jury may deviate from the presumptive amount of child support as set forth in subparagraph (i)(2)(K) of this Code section.
(h) Adjusted support obligation. The child support obligation table does not include the cost of the parent's work related child care costs, health insurance premiums, or uninsured health care expenses. The additional expenses for the child's health insurance premiums and work related child care costs shall be included in the calculations to determine child support. A nonparent custodian's expenses for work related child care costs and health insurance premiums shall be taken into account when establishing a final order.

## (1) Work related child care costs.

(A) Work related child care costs necessary for the parent's employment, education, or vocational training that are determined by the court to be appropriate, and that are appropriate to the parents' financial abilities and to the lifestyle of the child if the parents and child were living together, shall be averaged for a monthly amount and entered on the child support worksheet in the column of the parent initially paying the expense. Work related child care costs of a nonparent custodian shall be considered when determining the amount of this expense.
(B) If a child care subsidy is being provided pursuant to a means-tested public assistance program, only the amount of the child care expense actually paid by either parent or a nonparent custodian shall be included in the calculation.
(C) If either parent is the provider of child care services to the child for whom support is being determined, the value of those services shall not be an adjustment to the basic child support obligation when calculating the support award.
(D) If child care is provided without charge to the parent, the value of these services shall not be an adjustment to the basic child support obligation. If child care is or will be provided by a person who is paid for his or her services, proof of actual cost or payment shall be shown to the court before the court includes such payment in its consideration.
(E) The amount of work related child care costs shall be determined and added as an adjustment to the basic child support obligation as "additional expenses" whether paid directly by the parent or through a payroll deduction.
(F)
(i) The total amount of work related child care costs shall be divided between the parents pro rata to determine the presumptive amount of child support and shall be included in the worksheet and the final order.
(ii) In situations in which work related child care costs may be variable, the court or the jury may, in its discretion, remove work related child care costs from the calculation of support, and divide the work related child care costs pro rata, to be paid within a time specified in the final order. If a parent or nonparent custodian fails to comply with the final order:
(I) The other parent or nonparent custodian may enforce payment of the work related child care costs by any means permitted by law; or
(II) Child support services shall pursue enforcement when such unpaid costs have been reduced to a judgment in a sum certain.

## (2) Cost of health insurance premiums.

(A)
(i) The amount that is, or will be, paid by a parent for health insurance for the child for whom support is being determined shall be an adjustment to the basic child support obligation and prorated between the parents based upon their respective incomes. Payments made by a parent's employer for health insurance and not deducted from the parent's wages shall not be included. When a child for whom support is being determined is covered by a family policy, only the health insurance premium actually attributable to that child shall be added.
(ii) The amount of the cost for the child's health insurance premium shall be determined and added as an adjustment to the basic child support obligation as "additional expenses" whether paid directly by the parent or through a payroll deduction.
(iii) The total amount of the cost for the child's health insurance premium shall be divided between the parents pro rata to determine the total presumptive amount of child support and shall be included in the Child Support Schedule D - Additional Expenses and written order of the court together with the amount of the basic child support obligation.

## (B)

(i) If either parent has health insurance reasonably available at reasonable cost that provides for the health care needs of the child, then an amount to cover the cost of the premium shall be added as an adjustment to the basic child support obligation. A health insurance premium paid by a nonparent custodian shall be included when determining the amount of health insurance expense. In determining the amount to be added to the order for the health insurance cost, only the amount of the health insurance cost attributable to the child who is the subject of the order shall be included.
(ii) If coverage is applicable to other persons and the amount of the health insurance premium attributable to the child who is the subject of the current
action for support is not verifiable, the total cost to the parent paying the premium shall be prorated by the number of persons covered so that only the cost attributable to the child who is the subject of the order under consideration is included. The amount of health insurance premium shall be determined by dividing the total amount of the insurance premium by the number of persons covered by the insurance policy and multiplying the resulting amount by the number of children covered by the insurance policy. The monthly cost of health insurance premium shall be entered on the Child Support Schedule D - Additional Expenses in the column of the parent paying the premium.
(iii) Eligibility for or enrollment of the child in Medicaid, the PeachCare for Kids Program, or other public health care program shall satisfy the requirement that the final order provide for the child's health care needs. Health coverage through Medicaid, the PeachCare for Kids Program, or other public health care program shall not prevent a court from also ordering either or both parents to obtain other health insurance for the child.

## (3) Uninsured health care expenses.

(A) The child's uninsured health care expenses shall be the financial responsibility of both parents. The final order shall include provisions for payment of uninsured health care expenses; provided, however, that uninsured health care expenses shall not be used for the purpose of calculating the amount of child support. The parents shall divide uninsured health care expenses pro rata, unless otherwise specifically ordered by the court.
(B) If a parent fails to pay his or her pro rata share of the child's uninsured health care expenses, as specified in the final order, within a reasonable time after receipt of evidence documenting the uninsured portion of the expense:
(i) The other parent or the nonparent custodian may enforce payment of the expense by any means permitted by law; or
(ii) Child support services shall pursue enforcement of payment of such unpaid expenses only if the unpaid expenses have been reduced to a judgment in a sum certain amount.

## (i) Grounds for deviation.

## (1) General principles.

(A) The amount of child support established by this Code section and the presumptive amount of child support are rebuttable and the court or the jury may deviate from the presumptive amount of child support in compliance with this subsection. In deviating from the presumptive amount of child support, consideration shall be given to the best interest of the child for whom support under this Code section is being determined. A nonparent custodian's expenses may be the basis for a deviation as well as a noncustodial parent's ability or inability to pay the presumptive amount of child support.
(B) When ordering a deviation from the presumptive amount of child support, the court or the jury shall consider all available income of the parents and shall make written findings or special interrogatory findings that an amount of child support other than the amount calculated is reasonably necessary to provide for the needs of the child for whom child support is being determined and the order or special interrogatory shall state:
(i) The reasons for the deviation from the presumptive amount of child support;
(ii) The amount of child support that would have been required under this Code section if the presumptive amount of child support had not been rebutted; and
(iii) How, in its determination:
(I) Application of the presumptive amount of child support would be unjust or inappropriate; and
(II) The best interest of the child for whom support is being determined will be served by deviation from the presumptive amount of child support.
(C) No deviation in the presumptive amount of child support shall be made which seriously impairs the ability of the custodial parent to maintain minimally adequate housing, food, and clothing for the child being supported by the order and to provide other basic necessities, as determined by the court or the jury.
(D) If the circumstances which supported the deviation cease to exist, the final order may be modified as set forth in subsection (k) of this Code section to eliminate the deviation.

## (2) Specific deviations.

(A) High income. For purposes of this subparagraph, parents are considered to be high-income parents if their combined adjusted income exceeds $\$ 30,000.00$ per month. For high-income parents, the court shall set the basic child support obligation at the highest amount allowed by the child support obligation table but the court or the jury may consider upward deviation to attain an appropriate award of child support for high-income parents which is consistent with the best interest of the child.

## (B) Low income.

(i) If the noncustodial parent can provide evidence sufficient to demonstrate no earning capacity or that his or her pro rata share of the presumptive amount of child support would create an extreme economic hardship for such parent, the court or the jury may consider a low-income deviation.
(ii) A noncustodial parent whose sole source of income is supplemental security income received under Title XVI of the federal Social Security Act shall be considered to have no earning capacity.
(iii) The court or the jury shall examine all attributable and excluded sources of income, assets, and benefits available to the noncustodial parent and may consider the noncustodial parent's basic subsistence needs and all of his or her reasonable expenses, ensuring that such expenses are actually paid by the noncustodial parent and are clearly justified expenses.
(iv) In considering a request for a low-income deviation, the court or the jury shall then weigh the income and all attributable and excluded sources of income, assets, and benefits and all reasonable expenses of each parent, the relative hardship that a reduction in the amount of child support paid to the custodial parent would have on the custodial parent's household, the needs of each parent, the needs of the child for whom child support is being determined, and the ability of the noncustodial parent to pay child support.
(v) Following a review of the noncustodial parent's gross income and expenses, and taking into account each parent's basic child support obligation adjusted by health insurance and work related child care costs and the relative hardships on the parents and the child, the court or the jury, upon request by either party or upon the court's initiative, may consider a downward deviation to attain an appropriate award of child support which is consistent with the best interest of the child.
(vi) For the purpose of calculating a low-income deviation, the noncustodial parent's minimum child support for one child shall be not less than $\$ 100.00$ per month, and such amount shall be increased by at least $\$ 50.00$ for each additional child for the same case for which child support is being ordered.
(vii) A low-income deviation granted pursuant to this subparagraph shall apply only to the current child support amount and shall not prohibit an additional amount being ordered to reduce a noncustodial parent's arrears.
(viii) If a low-income deviation is granted pursuant to this subparagraph, such deviation shall not prohibit the court or the jury from granting an increase or
decrease to the presumptive amount of child support by the use of any other specific or nonspecific deviation.
(C) Other health related insurance. If the court or the jury finds that either parent has vision or dental insurance available at a reasonable cost for the child, the court or the jury may deviate from the presumptive amount of child support for the cost of such insurance.
(D) Life insurance. In accordance with Code Section 19-6-34, if the court or the jury finds that either parent has purchased life insurance on the life of either parent or the lives of both parents for the benefit of the child, the court may deviate from the presumptive amount of child support for the cost of such insurance by either adding or subtracting the amount of the premium.
(E) Child and dependent care tax credit. If the court or the jury finds that one of the parents is entitled to the Child and Dependent Care Tax Credit, the court or the jury may deviate from the presumptive amount of child support in consideration of such credit.
(F) Travel expenses. If court ordered visitation related travel expenses are substantial due to the distance between the parents, the court may order the allocation of such costs or the jury may, by a finding in its special interrogatory, allocate such costs by deviation from the presumptive amount of child support, taking into consideration the circumstances of the respective parents as well as which parent moved and the reason for such move.
(G) Alimony. Actual payments of alimony shall not be considered as a deduction from gross income but may be considered as a deviation from the presumptive amount of child support. If the court or the jury considers the actual payment of alimony, the court shall make a written finding of such consideration or the jury, in its special interrogatory, shall make a written finding of such consideration as a basis for deviation from the presumptive amount of child support.
(H) Mortgage. If the noncustodial parent is providing shelter, such as paying the mortgage of the home, or has provided a home at no cost to the custodial parent in which the child resides, the court or the jury may allocate such costs or an amount equivalent to such costs by deviation from the presumptive amount of child support, taking into consideration the circumstances of the respective parents and the best interest of the child.
(I) Permanency plan or foster care plan. In cases when the child is in the legal custody of the Department of Human Services, the child protection or foster care agency of another state or territory, or any other child-caring entity, public or private, the court or the jury may consider a deviation from the presumptive amount of child support if the deviation will assist in accomplishing a permanency plan or foster care plan for the child that has a goal of returning the child to the parent or parents and the parent's need to establish an adequate household or to otherwise adequately prepare herself or himself for the return of the child clearly justifies a deviation for this purpose.
(J) Extraordinary expenses. The child support obligation table includes average childrearing expenditures for families given the parents' combined adjusted income and number of children. Extraordinary expenses are in excess of average amounts estimated in the child support obligation table and are highly variable among families. Extraordinary expenses shall be considered on a case-by-case basis in the calculation of support and may form the basis for deviation from the presumptive amount of child support so that the actual amount of such expense is considered in the final order for only those families actually incurring the expense. Extraordinary expenses shall be prorated between the parents by assigning or deducting credit for actual payments for extraordinary expenses.
(i) Extraordinary educational expenses. Extraordinary educational expenses may be a basis for deviation from the presumptive amount of child support. Extraordinary educational expenses include, but are not limited to, tuition, room and board, lab fees, books, fees, and other reasonable and necessary expenses associated with special needs education or private elementary and secondary schooling that are
appropriate to the parent's financial abilities and to the lifestyle of the child if the parents and the child were living together.
(I) In determining the amount of deviation for extraordinary educational expenses, scholarships, grants, stipends, and other cost-reducing programs received by or on behalf of the child shall be considered; and
(II) If a deviation is allowed for extraordinary educational expenses, a monthly average of the extraordinary educational expenses shall be based on evidence of prior or anticipated expenses and entered on the Child Support Schedule E Deviations.
(ii) Special expenses incurred for child-rearing. Special expenses incurred for childrearing, including, but not limited to, quantifiable expense variations related to the food, clothing, and hygiene costs of children at different age levels, may be a basis for a deviation from the presumptive amount of child support. Such expenses include, but are not limited to, summer camp; music or art lessons; travel; school sponsored extracurricular activities, such as band, clubs, and athletics; and other activities intended to enhance the athletic, social, or cultural development of a child but not otherwise required to be used in calculating the presumptive amount of child support as are health insurance premiums and work related child care costs. A portion of the basic child support obligation is intended to cover average amounts of special expenses incurred in the rearing of a child. In order to determine if a deviation for special expenses is warranted, the court or the jury shall consider the full amount of the special expenses as described in this division; and when such special expenses exceed 7 percent of the basic child support obligation, then the additional amount of special expenses shall be considered as a deviation to cover the full amount of the special expenses.
(iii) Extraordinary medical expenses. In instances of extreme economic hardship involving extraordinary medical expenses not covered by insurance, the court or the jury may consider a deviation from the presumptive amount of child support for extraordinary medical expenses. Such expenses may include, but are not
limited to, extraordinary medical expenses of the child or a parent of the child; provided, however, that any such deviation:
(I) Shall not act to leave a child unsupported; and
(II) May be ordered for a specific period of time measured in months.

When extraordinary medical expenses are claimed, the court or the jury shall consider the resources available for meeting such needs, including sources available from agencies and other adults.
(K) Parenting time.
(i) The child support obligation table is based upon expenditures for a child in intact households. The court may order or the jury may find by special interrogatory a deviation from the presumptive amount of child support when special circumstances make the presumptive amount of child support excessive or inadequate due to extended parenting time as set forth in the order of visitation, the child residing with both parents equally, or visitation rights not being utilized.
(ii) If the court or the jury determines that a parenting time deviation is applicable, then such deviation shall be included with all other deviations.
(iii) In accordance with subsection (d) of Code Section 19-11-8, if any action or claim for parenting time or a parenting time deviation is brought under this subparagraph, it shall be an action or claim solely between the custodial parent and the noncustodial parent, and not any third parties, including child support services.
(3) Nonspecific deviations. Deviations from the presumptive amount of child support may be appropriate for reasons in addition to those established under this subsection when the court or the jury finds it is in the best interest of the child.

## (j) Involuntary loss of income.

(1) In the event a parent suffers an involuntary termination of employment, has an extended involuntary loss of average weekly hours, is involved in an organized strike, incurs a loss of health, becomes incarcerated, or similar involuntary adversity resulting in a loss of income of 25 percent or more, then the portion of child support attributable to lost income shall not accrue from the date of the service of the petition for modification, provided that service is made on the other parent. It shall not be considered an involuntary termination of employment if the parent has left the employer without good cause in connection with the parent's most recent work.
(2) In the event a modification action is filed pursuant to this subsection, the court shall make every effort to expedite hearing such action.
(3) The court may, at its discretion, phase in the new child support award over a period of up to one year with the phasing in being largely evenly distributed with at least an initial immediate adjustment of not less than 25 percent of the difference and at least one intermediate adjustment prior to the final adjustment at the end of the phase-in period.

## (k) Modification.

(1) Except as provided in paragraph (2) of this subsection, a parent shall not have the right to petition for modification of the child support award regardless of the length of time since the establishment of the child support award unless there is a substantial change in either parent's income and financial status or the needs of the child.
(2) No petition to modify child support may be filed by either parent within a period of two years from the date of the final order on a previous petition to modify by the same parent except when:
(A) A noncustodial parent has failed to exercise the court ordered visitation;
(B) A noncustodial parent has exercised a greater amount of visitation than was provided in the court order; or
(C) The motion to modify is based upon an involuntary loss of income as set forth in subsection ( j ) of this Code section.
(3)
(A) If there is a difference of at least 15 percent but less than 30 percent between a new award and a Georgia child support order entered prior to January 1, 2007, the court may, at its discretion, phase in the new child support award over a period of up to one year with the phasing in being largely evenly distributed with at least an initial immediate adjustment of not less than 25 percent of the difference and at least one intermediate adjustment prior to the final adjustment at the end of the phase-in period.
(B) If there is a difference of 30 percent or more between a new award and a Georgia child support order entered prior to January 1, 2007, the court may, at its discretion, phase in the new child support award over a period of up to two years with the phasing in being largely evenly distributed with at least an initial immediate adjustment of not less than 25 percent of the difference and at least one intermediate adjustment prior to the final adjustment at the end of the phasein period.
(C) All child support service's case reviews and modifications shall proceed and be governed by Code Section 19-11-12. Subsequent changes to the child support obligation table shall be a reason to request a review for modification from child support services to the extent that such changes are consistent with the requirements of Code Section 19-11-12.
(4) A petition for modification shall be filed under the same rules of procedure applicable to divorce proceedings. The court may allow, upon motion, the temporary modification of a child support order pending the final trial on the petition. An order granting temporary modification shall be subject to revision by
the court at any time before the final trial. A jury may be demanded on a petition for modification but the jury shall only be responsible for determining a parent's gross income and any deviations. In the hearing upon a petition for modification, testimony may be given and evidence introduced relative to the change of circumstances, income and financial status of either parent, or in the needs of the child. After hearing both parties and the evidence, the court may modify and revise the previous judgment, in accordance with the changed circumstances, income and financial status of either parent, or in the needs of the child, if such change or changes are satisfactorily proven so as to warrant the modification and revision and such modification and revisions are in the child's best interest.

The court shall enter a written order specifying the basis for the modification, if any, and shall include all of the information set forth in paragraph (2) of subsection (c) of this Code section.
(5) In proceedings for the modification of a child support award pursuant to the provisions of this Code section, the court may award attorney's fees, costs, and expenses of litigation to the prevailing party as the interests of justice may require. When a custodial parent prevails in an upward modification of child support based upon the noncustodial parent's failure to be available and willing to exercise court ordered visitation, reasonable and necessary attorney's fees and expenses of litigation shall be awarded to the custodial parent.
(l) Split parenting. In cases of split parenting, a worksheet shall be prepared separately by each custodial parent for each child for whom such parent is the custodial parent, and that worksheet shall be filed with the clerk of court. For each split parenting custodial situation, the court shall determine:
(1) Which parent is the obligor;
(2) The presumptive amount of child support;
(3) The actual award of child support, if different from the presumptive amount of child support;
(4) How and when the sum certain amount of child support owed shall be paid; and
(5) Any other child support responsibilities for each parent.

## (m) Worksheets.

(1) Schedules and worksheets shall be prepared by the parties for purposes of calculating the amount of child support. In child support services cases in which neither parent prepared a worksheet, the court may rely on the worksheet prepared by child support services as a basis for its order. Information from the schedules shall be entered on the child support worksheet. The child support worksheets and any schedule that was prepared for the purpose of calculating the amount of child support shall be attached to the final court order or judgment; provided, however, that any order entered pursuant to Code Section 19-13-4 shall not be required to have such worksheets and schedules attached thereto.
(2) The child support worksheet and schedules shall be promulgated by the Georgia Child Support Commission.
( n ) Child support obligation table. The child support obligation table shall be proposed by the Georgia Child Support Commission and shall be as codified in subsection (o) of this Code section.

## (o) Georgia Schedule of Basic Child Support Obligations.

(Nov. 1, 2022)

Points of view expressed in this document are those of the author and do not necessarily represent the official position of the Court or Commission reviewing the guidelines. The author is responsible for any errors and omissions.

## ACKNOWLEDGMENTS

The authors would like to acknowledge the extraordinary efforts of Superior Court Clerks and the Department of Human Services (DHS), Division of Child Support Services (DCSS) staff and administrators in providing the case file data used in this study. It was fortunate for the study that the Commission staff and DCSS staff and administrators coordinated their efforts well. Special thanks go to Noelle Lagueux-Alvarez, Elaine Johnson, and Latoinna Lawrence, of the Judicial Council/Administrative Office of the Courts and who serve as staff to the Georgia Child Support Commission, and to Erica Thornton and Ryan Bradley of the DHS/DCSS. The authors would also like to recognize the many efforts of the Georgia Child Support Commission's Economic Subcommittee, especially its Chair, Dr. Roger Tutterow. Among other things, the Economic Subcommittee gathered public comment for consideration during this study and Dr. Tutterow implemented an algorithm that he developed to select the counties involved in this study in a methodical way to represent all of Georgia.

## SECTION 1: INTRODUCTION

The Georgia child support guidelines are set in state statute (O.C.G.A. §19-6-15). They are to be used by all judges and officials who can establish or modify a child support order within the state. Georgia is currently reviewing its child support guidelines. Federal regulation (Title 45 of the Code of Federal Regulations, C.F.R. § 302.56) requires states to review their guidelines at least once every four years. As part of that review, states must consider economic data on the cost of raising children, examine case file data to analyze the application of and deviation from the guidelines, consider labor market data, and consider other data: rate of orders entered by default, rate that income is imputed to the parent obligated to pay support, rate that the state's low-income adjustment is applied, and payment data.

This report documents Georgia's fulfillment of these federal data requirements. The information will be considered by the Commission reviewing the guidelines. State statute (O.C.G.A. §19-6-50) also requires that the guidelines be reviewed at least once every four years and charges the Commission with determining the appropriateness of the guidelines. Not only is the Commission considering the information in this report but will also be considering information from many other sources. The Commission will submit its findings and any recommendations to the Georgia legislature. Ultimately, any changes to the child support guidelines are made through the legislative process.

## Overview of Federal Regulation Pertaining to State Guidelines Reviews

Federal regulations pertaining to state guidelines reviews, which are listed at the end of this section, were expanded in December 2016. To meet the federal data review requirements, this report contains the findings from analyzing data from three major sources: economic data on the cost of raising children, case file data, and labor market data. The federal intent is that states will consider economic data when reviewing the adequacy and appropriateness of their state guidelines table or formula. The analysis of case file data fulfills several specific federal requirements including the analysis of guidelines deviations to inform how the state can meet the federal goal of limiting the number of deviations. ${ }^{1}$ The requirement to examine economic data and deviations predated the 2016 federal rule changes. Georgia has consistently met these data review requirements in its past guidelines reviews.

The analysis of rates of default, income imputation, and application of the low-income adjustment (which is provided as a deviation factor in Georgia); and, payment data were added as federal data requirements in 2016 . States faced a rolling timeline that aligns with a state's review cycle. It can span three quadrennial review cycles for some states. Georgia was one of the earliest states to meet these data requirements. Georgia considered all additional data requirements as part of its 2018 guidelines review.

In general, the 2016 federal rule changes aim to increase regular, on-time payments to families, to increase the number of obligated parents working and supporting their children, and to reduce the

[^0]accumulation of unpaid arrears. ${ }^{2}$ The federal rule changes were particularly intent on improving child support policies among low-income cases. The final rule singled out income imputation as an overused approach to determining income among low-income obligated parents. ${ }^{3}$ This is undoubtedly why states are required to consider their income imputation rate when reviewing their guidelines. In proposing the rule, the federal Office of Child Support Enforcement noted that many states were imputing a standard amount of income even when there was evidence of involuntary, part-time employment and low earnings. To alleviate this practice, federal regulation now requires state guidelines to consider the actual circumstances of the obligated parent when income imputation is authorized such as factors that affect the parent's employability (e.g., the parent's highest educational attainment) and local labor market conditions. (As an aside, Georgia child support guidelines provide for the consideration of these actual circumstances.)

Federal regulation also noted the correlation between income imputation and default orders as well as the importance of engaging both parents in the order establishment process in order to produce more accurate order setting. ${ }^{4}$ This also explains the addition of the federal requirement to consider the state's default rate. The proposed and final rule cited research finding support orders set beyond a lowincome parent's ability to pay (particularly when income is imputed above the actual earnings of a lowincome parent) go unpaid and result in uncollectible arrears balances. ${ }^{5}$ This is the impetus for the federal requirement for state guidelines to consider the subsistence needs of the obligated parent (and the custodial parent at the state's discretion) and why federal regulation requires the consideration of the rate that the low-income adjustment is applied as part of a state's guidelines review.

## Georgia Children and Their Parents

Child support is an important source of income to many Georgia children. Based on the U.S. Census American Community Survey, 2,516,293 children lived in Georgia in 2021. ${ }^{6}$ The 2022 Kids Count reports several statistics that are relevant to child support. ${ }^{7}$

- The percentage of Georgia children living in poverty is 20 percent, while it is 17 percent nationally. ${ }^{8}$

[^1]- The percentage of children whose parents lack secure employment is 27 percent in Georgia and 17 percent nationally.
- The percentage of children living in single-parent families is 38 percent in Georgia and 34 percent nationally.
- The percentage of Georgia female-headed families receiving child support is 18 percent, while it is 26 percent nationally. ${ }^{9}$

Still, many Georgia families benefit from child support. In federal fiscal year (FFY) 2021, the state child support agency, the Division of Child Support Services (DCSS) of the Georgia Department of Human Services (DHS), served 340,726 cases. ${ }^{10}$ In FFY 2021, DCSS established 11,948 support orders, collected and distributed over $\$ 715$ million in child support, and received 63 percent of the current support due. Cases receiving assistance through the Temporary Assistance to Needy Families (TANF) program must cooperate with DCSS to establish, collect, and enforce child support orders. Non-assistance cases may also use DCSS services for a nominal fee, but it is not required. The number of child support cases that are not part of DCSS and the collections on those cases are unknown. Nonetheless, non-DCSS cases generally have higher incomes than DCSS cases; hence, higher collections. ${ }^{11}$ Regardless of DCSS status, many child support metrics (e.g., the number of order establishments) are generally lower than prepandemic amounts at both the state level and national level.

Although state-specific data are not available, a 2015 national study found that without child support, the child poverty rate would be 7.0 percentage points higher. ${ }^{12}$ Still, other national research finds that almost a quarter of nonresidential parents have no or limited reported earnings. ${ }^{13}$ These statistics underscore the delicate balance at low incomes where child support can help lift families out of poverty, but must recognize that low-income parents who are not living with the child may have a limited ability to pay. Federal regulation (45 C.F.R. 302.56 (1)(c)(ii)) requires that state guidelines consider the basic subsistence needs of the noncustodial parent (and at the State's discretion, the custodial parent and children) who has a limited ability to pay. How a state meets that requirement and the parameters of that consideration (e.g., defining a level of basic subsistence needs) is at the discretion of a state. The

[^2]narrative supporting the federal rule suggests that states base it on the economic and demographic factors of their state. ${ }^{14}$

## Current Georgia table

At the core of the Georgia guidelines calculation is a table of basic support obligations. Exhibit 1 provides an excerpt of the existing table. The support obligation is determined by prorating the obligated parent's share of the basic obligation from the table. For example, if the income of the obligated parent is $\$ 2,000$ per month and the income of the parent receiving support is $\$ 1,500$ per month, the combined monthly income is $\$ 3,500$ per month. The basic obligation for a combined monthly income of $\$ 3,500$ for one child, based on Exhibit 1, is $\$ 702$ per month. This reflects economic data on how much parents spend on the child together, if they lived in the same household and shared financial resources. The amount for which each parent is financially responsible is based on that parent's prorated share of the basic obligation (\$702 in this scenario). The obligor's prorated share is 57 percent (i.e., $\$ 2,000$, which is the obligated parent's income, divided by $\$ 3,500$, which is

Exhibit 1: Excerpt from Georgia Child Support Table

| Combined Adjusted <br> Gross Income | One <br> Child | Two <br> Children | Three <br> Children |
| ---: | ---: | ---: | ---: |
| 3050.00 | 629 | 893 | 1036 |
| 3100.00 | 638 | 906 | 1051 |
| 3150.00 | 647 | 919 | 1066 |
| 3200.00 | 655 | 930 | 1079 |
| 3250.00 | 663 | 941 | 1092 |
| 3300.00 | 671 | 952 | 1104 |
| 3350.00 | 679 | 963 | 1117 |
| 3400.00 | 687 | 974 | 1130 |
| 3450.00 | 694 | 985 | 1143 |
| 3500.00 | 702 | 996 | 1155 |
| 3550.00 | 710 | 1008 | 1168 |
| 3600.00 | 718 | 1019 | 1181 |
| 3650.00 | 726 | 1030 | 1194 | the combined income). Hence, the obligor's prorated share of the basic obligation is $\$ 400$ per month ( $57 \%$ multiplied by $\$ 702$ ). This is the basis of the child support obligation, although there may be additional adjustments for other considerations such as work-related childcare expenses or when the parents share custody.

The basic obligations in the table reflect economic data on the costs of raising children in Georgia when the table was developed in 2005. The underlying economic studies of child-rearing expenditures was published in 2001-2002, and conducted by Professor David Betson, University of Notre Dame using expenditure data from families surveyed in 1996-99. ${ }^{15}$ An economic methodology is needed to separate the child's share of expenditures from total household expenditures because many expenses are

[^3]comingled between the children and adults living in the same household (e.g., a loaf of bread and electricity for the home are consumed by both children and adults and the child's share is not readily identifiable.) Economic methodologies produce different results. The Betson study that forms the basis of the existing table included estimates of child-rearing expenditures from two different methodologies: the Rothbarth methodology; and, the Engel methodology.

Both approaches start by examining expenditures for two sets of families that are equally well-off: those of child-rearing age with children; and, the other of child-rearing age without children. The difference in their expenditures is deemed to be expenditures devoted to child rearing. The Rothbarth methodology uses expenditures on adult goods; ${ }^{16}$ and the Engel methodology uses food shares to equate equally well-off families. Economists generally recognized that substitution effects cause some bias in each of the methodologies: one was thought to overstate actual child-rearing expenditures and the other was thought to understate actual child-rearing expenditures. ${ }^{17}$

At the time that Georgia developed its existing table, the Rothbarth estimates were lower than the Engel estimates. Georgia decided to average the two amounts to develop its child support table that is still in effect today. Most states ( 31 states, the District of Columbia, and Guam) rely on Rothbarth estimates. Besides Georgia, only a few states (e.g., California and Florida) rely on Engel estimates: all of those states rely on a very old Engel study estimated from expenditures data collected from families surveyed in 1972-73. Until recently, there were no new Engel studies available for Georgia to use to update its table. However, there were several new Rothbarth studies.

Two Rothbarth studies were published recently that use expenditure data collected from families surveyed in 2013-2019. ${ }^{18}$ One was conducted by Betson and already forms the basis of six state guidelines (i.e., Arizona, Alabama, Iowa, Missouri, Pennsylvania, and South Dakota). It is also being recommended as the basis of updated tables in several other states currently. The other Rothbarth study was conducted by Florida State University for Florida and has not been adopted by Florida nor any other state. ${ }^{19}$ No credible study of child-rearing expenditures uses more current data than 2013-2019. Engel estimates from the same data years (2013-2019) were developed by Betson for this study. They are discussed in Appendix A. The Florida researchers also developed Engel estimates. Betson and the Florida researchers apply the Engel methodology differently, but arrive at very similar results.

[^4]Other Factors Considered in the Child Support Table
Besides the economic basis of an updated table, there are many other factors considered in the development of a child support table.

1. The guidelines model is a policy decision that directs what type of economic study of childrearing expenditures to use. As discussed in more detail later, most states rely on a guidelines model that provides for more than the child's basic needs when the obligated parent has sufficient income to enjoy a higher standard of living. Most guidelines models presume that if the parent can afford to enjoy a higher standard of living, the child should share in that higher standard of living. Georgia, like most states, relies on the income shares model. Georgia switched from a percentage-of-obligor guidelines model to income shares over a decade ago.
2. The economic study underlying the table. There are several different methodologies for separating the child's share of expenditures from total household expenditures. Economists do not agree which methodology best measures actual child-rearing expenditures, but generally agree that guidelines amounts that are above the lowest of credible measurements provide adequate support for children. ${ }^{20}$ Besides the methodology, the results are affected by the underlying expenditure data. Most measurements rely on the Consumer Expenditure (CE) Survey conducted by the U.S. Bureau of Labor Statistics (BLS). The CE survey is a very thorough and rigorous survey. The BLS is constantly making changes to the survey in its continuous improvement efforts. These improvements can affect differences in study results over time.
3. Current Price Levels. Due to lags between when expenditures data are collected and analyzed and estimates of child-rearing expenditures are developed, most states update the estimates for current price levels.
4. Exclude childcare, child's health insurance premium, and extraordinary, out-of-pocket medical expenses from table amounts. Estimates of child-rearing expenditures include all expenses. Most state child support guidelines (including Georgia) consider the actual amount expended for work-related childcare, the child's health insurance premium, and extraordinary, out-of-pocket medical expenses for the child on a case-by-case basis. For this reason, these expenses are removed from the estimates when developing a child support table.
5. Convert expenditures to gross-income basis. A conversion is necessary because child-rearing expenditures are measured as a percentage of total expenditures and the Georgia child support table is based on gross income. To develop the existing table, the conversion was a two-step process. First, expenditures are converted to net income using average expenditures to net income range. The second step is using federal and state income tax rates and FICA to convert to gross income.

[^5]6. At a state's discretion, provide for the consideration of the subsistence needs of the obligated parent in the table. This is how most states fulfill the federal requirement 45 C.F.R. 302.56 (1)(c)(ii)) to consider the subsistence needs of the obligated parent. Some states, however, put the adjustment in the worksheet instead. Georgia provides for the consideration of the subsistence needs of the obligated parent through a deviation criterion.

The existing Georgia child support table considered price levels and federal and state income taxes and FICA in 2005. For comparison purposes, 2022 amounts are considered.

## REPORT Organization

Section 2 reviews case file data, labor market data and other data.
Section 3 reviews the economic evidence on the cost of raising children and develops an updated schedule.

Section 4 assesses the current schedule using the current economic evidence of child-rearing expenditures, case file data, labor market data and comparisons to bordering states.

Section 5 provides conclusions and summarizes major findings.
Exhibit 2: Federal Regulation Concerning State Child Support Guidelines

## 45 C.F.R. § 302.56 Guidelines for setting child support orders

(a) Within 1 year after completion of the State's next quadrennial review of its child support guidelines, that commences more than 1 year after publication of the final rule, in accordance with § 302.56(e), as a condition of approval of its State plan, the State must establish one set of child support guidelines by law or by judicial or administrative action for setting and modifying child support order amounts within the State that meet the requirements in this section.
(b) The State must have procedures for making the guidelines available to all persons in the State.
(c) The child support guidelines established under paragraph (a) of this section must at a minimum:
(1) Provide that the child support order is based on the noncustodial parent's earnings, income, and other evidence of ability to pay that:
(i) Takes into consideration all earnings and income of the noncustodial parent (and at the State's discretion, the custodial parent);
(ii) Takes into consideration the basic subsistence needs of the noncustodial parent (and at the State's discretion, the custodial parent and children) who has a limited ability to pay by incorporating a low-income adjustment, such as a self- support reserve or some other method determined by the State; and
(iii) If imputation of income is authorized, takes into consideration the specific circumstances of the noncustodial parent (and at the State's discretion, the custodial parent) to the extent known, including such factors as the noncustodial parent's assets, residence, employment and earnings history, job skills, educational attainment, literacy, age, health, criminal record and other employment barriers, and record of seeking work, as well as the local job market, the availability of employers willing to hire the noncustodial parent, prevailing earnings level in the local community, and other relevant background factors in the case.
(2) Address how the parents will provide for the child's health care needs through private or public health care coverage
and/or through cash medical support;
(3) Provide that incarceration may not be treated as voluntary unemployment in establishing or modifying support orders; and
(4) Be based on specific descriptive and numeric criteria and result in a computation of the child support obligation.
(d) The State must include a copy of the child support guidelines in its State plan.
(e) The State must review, and revise, if appropriate, the child support guidelines established under paragraph (a) of this section at least once every four years to ensure that their application results in the determination of appropriate child support order amounts. The State shall publish on the internet and make accessible to the public all reports of the guidelines reviewing body, the membership of the reviewing body, the effective date of the guidelines, and the date of the next quadrennial review.
(f) The State must provide that there will be a rebuttable presumption, in any judicial or administrative proceeding for the establishment and modification of a child support order, that the amount of the order which would result from the application of the child support guidelines established under paragraph (a) of this section is the correct amount of child support to be ordered.
(g) A written finding or specific finding on the record of a judicial or administrative proceeding for the establishment or modification of a child support order that the application of the child support guidelines established under paragraph (a) of this section would be unjust or inappropriate in a particular case will be sufficient to rebut the presumption in that case, as determined under criteria established by the State. Such criteria must take into consideration the best interests of the child. Findings that rebut the child support guidelines shall state the amount of support that would have been required under the guidelines and include a justification of why the order varies from the guidelines.
(h) As part of the review of a State's child support guidelines required under paragraph (e) of this section, a State must: (1) Consider economic data on the cost of raising children, labor market data (such as unemployment rates, employment rates, hours worked, and earnings) by occupation and skill-level for the State and local job markets, the impact of guidelines policies and amounts on custodial and noncustodial parents who have family incomes below 200 percent of the Federal poverty level, and factors that influence employment rates among noncustodial parents and compliance with child support orders;
(2) Analyze case data, gathered through sampling or other methods, on the application of and deviations from the child support guidelines, as well as the rates of default and imputed child support orders and orders determined using the lowincome adjustment required under paragraph (c)(1)(ii) of this section. The analysis must also include a comparison of payments on child support orders by case characteristics, including whether the order was entered by default, based on imputed income, or determined using the low-income adjustment required under paragraph (c)(1)(ii). The analysis of the data must be used in the State's review of the child support guidelines to ensure that deviations from the guidelines are limited and guideline amounts are appropriate based on criteria established by the State under paragraph (g); and (3) Provide a meaningful opportunity for public input, including input from low-income custodial and noncustodial parents and their representatives. The State must also obtain the views and advice of the State child support agency funded under title IV-D of the Act.

Section 2: Analysis of Case File Data and Labor Market Information
This section documents the findings from the analysis of case file data and labor market data required by federal regulation. The findings from the analysis are organized by the two data sources.

## Findings from the Analysis of Case File Data

Commission staff coordinated with the DCSS and Superior Court Clerks to sample case files to obtain the data needed to fulfill federal data requirements. The data are also collected to assess procedural and appropriate documentation of orders that is in turn, used to identify areas where better instructions or training may be needed, which is another task that the Commission staff performs. ${ }^{21}$

The same sampling protocol used to collect case file data for previous child support guideline reviews was used for this review. It consists of reviewing orders established or modified in randomly-selected Georgia counties within a designated sample time period. Dr. Roger Tutterow, economist and Commission member, designs the sampling to represent a cross-section of Georgia. The sampling strategy selects different counties for each review. Historically, the sample from court cases has consisted of cluster sampling from 12 counties. It was expanded to 16 counties for this review to deepen the sample's representation of Georgia's diverse demographics and numerous counties.

Superior Court Clerks of the sampled counties are asked to submit child support orders (and their respective worksheets) from the sample months. For this review, the sample months were September and October 2021. If the order is an IV-D order, DCSS supplies the final order and respective worksheet. Commission staff create an Excel database of the information from the orders and worksheets.

Georgia has a long history of sampling from the court records because it is the best source of both DCSS and private orders; hence, representative of all cases in which the Georgia child support guidelines would apply. The limitation of it, however, is the court does not track payments, where federal regulation requires the analysis of payment data. To be clear, payment in private cases is a private issue so not tracked by any government or court entity unless there is an Income Deduction Order in place. DCSS tracks payments on their cases. Commission staff organized the collection of payment information for DCSS sampled cases and merged it with the case file data obtained from the DCSS orders. Commission staff sent the final data set to Center for Policy Research (CPR) for analysis.

Exhibit 3 shows the counties selected for the 2021 sampling of the court records. It shows a total of 277 private (non-DCSS orders) and 195 DCSS orders. When combined, the total sample consists of 472 orders.

[^6]Exhibit 3: Number of Cases Sampled in 2021 by County

|  | Private Cases <br> ( $\mathbf{n}=\mathbf{2 7 7 )}$ |  | DCSS Cases <br> ( $\mathbf{n}=\mathbf{1 9 5}$ ) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Number of <br> Cases | \% of Total | Number of <br> Cases | \% of Total |
| County of the Order |  |  |  |  |
| Appling | 4 | $1 \%$ | 10 | $5 \%$ |
| Clayton | 37 | $13 \%$ | 39 | $20 \%$ |
| Early | 4 | $1 \%$ | 11 | $6 \%$ |
| Echols | 1 | $0 \%$ | 0 | $0 \%$ |
| Elbert | 5 | $2 \%$ | 3 | $2 \%$ |
| Fannin | 7 | $3 \%$ | 2 | $1 \%$ |
| Fayette | 2 | $1 \%$ | 8 | $4 \%$ |
| Forsyth | 41 | $15 \%$ | 2 | $1 \%$ |
| Glascock | 1 | $0 \%$ | 2 | $1 \%$ |
| Glynn | 19 | $7 \%$ | 13 | $7 \%$ |
| Houston | 61 | $22 \%$ | 41 | $21 \%$ |
| Paulding | 35 | $13 \%$ | 23 | $12 \%$ |
| Rockdale | 26 | $9 \%$ | 13 | $7 \%$ |
| Stewart | 0 | $0 \%$ | 2 | $1 \%$ |
| Troup | 15 | $5 \%$ | 12 | $6 \%$ |
| Ware | 19 | $7 \%$ | 14 | $7 \%$ |

The information recorded in the 2017 dataset is generally very similar to that for this review. When available for both time periods, the findings from the 2021 sample are compared to the findings from the 2017 sample to note changes over time. The 2017 sample included 190 orders of which 101 orders were private orders and 89 were DCSS orders.

## Terminology

For consistency with the data, the terms, "noncustodial parent" and "custodial parent" are used. These terms don't capture each parent's role in shared-physical custody or split custody. Sometimes, "obligated parent" is used instead of "noncustodial parent" because it aligns better with child support obligations. Nonetheless, it also is not appropriate for shared physical custody and split custody cases.

## Major Findings from the Analysis

Exhibit 4 shows some basic characteristics of the cases and orders. The vast majority ( $90 \%$ or more depending on whether they were private or DCSS orders) covered one or two children. More DCSS orders involve one child than the last review and there are fewer DCSS orders involving two children. For private orders, the number of children has been fairly stable.

The custodial person, who is typically the parent who will be receiving support, is a parent of the child in most orders. There are few non-parent, custodial parents: 2 percent among private orders and 14 percent among DCSS orders. The percentage of non-parent, custodial parents is increasing among DCSS orders. These non-parent, custodial parents could be grandparents, other relatives, foster care cases, child protective services cases, and other situations.

Exhibit 4: Selected Characteristics of the Case and Parties (\% of Orders)

|  | 2021 Sample |  | 2017 Sample |  |
| :--- | :---: | :---: | :---: | :---: |
|  | Private <br> Orders <br> $(\mathbf{n}=\mathbf{2 7 7 )}$ | DCSS <br> Orders <br> $(\mathbf{n}=195)$ | Private <br> Orders <br> $(\mathbf{n}=101)$ | DCSS <br> Orders <br> $(\mathbf{n}=89)$ |
| Number of Children on Order |  |  |  |  |
| One Child | $54 \%$ | $76 \%$ | $56 \%$ | $65 \%$ |
| Two Children | $36 \%$ | $17 \%$ | $32 \%$ | $30 \%$ |
| Three Children | $8 \%$ | $5 \%$ | $9 \%$ | $5 \%$ |
| Four or more children | $2 \%$ | $2 \%$ | $3 \%$ | $0 \%$ |
| Custodian Person Is the Mother or Father to the Child? |  |  |  |  |
| Yes | $98 \%$ | $86 \%$ | $99 \%$ | $93 \%$ |
| No | $2 \%$ | $14 \%$ | $1 \%$ | $7 \%$ |
| Court Action Type |  |  |  |  |
| Add Child |  |  |  |  |
| Change Custody | $0 \%$ | $2 \%$ | N.A. | N.A. |
| Child Support | $3 \%$ | $0 \%$ |  |  |
| Divorce Decree | $1 \%$ | $0 \%$ |  |  |
| Legitimation | $77 \%$ | $0 \%$ |  |  |
| Modification | $9 \%$ | $0 \%$ |  |  |
| Paternity/Child support | $6 \%$ | $3 \%$ |  |  |
| Review/Modification | $0 \%$ | $79 \%$ |  |  |
| Temporary | $0 \%$ | $13 \%$ |  |  |

The last row of Exhibit 4 shows that the majority ( $77 \%$ ) of private orders were established as part of a divorce action and the majority ( $79 \%$ ) of DCSS orders originated from paternity and support petitions. Other than review/modification actions, which comprised 13 percent of DCSS orders, no other court action comprised more than 10 percent of any court order type. A child support order may be established or modified to add a child, when there is a change in custody, legitimation of the child, and other legal actions.

Income, Income Imputation, and Income Deductions
Exhibit 5 and Exhibit 6 show the incomes of the noncustodial parents and custodial parents, respectively. It shows that the median incomes of noncustodial parents are generally unchanged over time. Among private orders, the median income was $\$ 3,500$ gross per month in 2021 and $\$ 3,333$ gross per month in 2017. Among DCSS orders, the median income was $\$ 1,740$ gross per month in 2021 and $\$ 1,697$ gross per month in 2017. As discussed more later, income is frequently imputed to DCSS noncustodial parents. It is typically imputed at $\$ 1,257$ gross per month, which is equivalent to full-time, minimum wage earnings.

Exhibit 5: Gross Incomes of the Noncustodial (Obligated) Parent (\% of orders unless noted)

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private <br> Orders <br> $(\mathbf{n}=\mathbf{2 7 7 )}$ | DCSS <br> Orders <br> $(\mathbf{n}=\mathbf{1 9 5})$ | Private <br> Orders <br> $(\mathbf{n}=97)$ | DCSS <br> Orders <br> $(\mathbf{n}=85)$ |
| Noncustodial Parent's Monthly Income* |  |  |  |  |
| Average | $\$ 4,600$ | $\$ 2,206$ | $\$ 4,334$ | $\$ 2,878$ |
| Median | $\$ 3,500$ | $\$ 1,740$ | $\$ 3,333$ | $\$ 1,697$ |
| Minimum | $\$ 1,088$ | $\$ 631$ | $\$$ | 0 |
| Maximum | $\$ 50,000$ | $\$ 8,333$ | $\$ 47,080$ | $\$ 50,000$ |
| Noncustodial Parent's Monthly Income* |  |  |  |  |
| \$0 | $0 \%$ | $0 \%$ | $2 \%$ | $0 \%$ |
| $\$ 1-\$ 1,000$ | $0 \%$ | $7 \%$ | $1 \%$ | $2 \%$ |
| $\$ 1,001-\$ 2,000$ | $26 \%$ | $52 \%$ | $21 \%$ | $58 \%$ |
| $\$ 2,001-\$ 3,000$ | $15 \%$ | $19 \%$ | $24 \%$ | $17 \%$ |
| $\$ 3,001-\$ 4,000$ | $16 \%$ | $12 \%$ | $11 \%$ | $12 \%$ |
| $\$ 4,001-\$ 5,000$ | $14 \%$ | $5 \%$ | $16 \%$ | $2 \%$ |
| More than \$5,000 | $29 \%$ | $5 \%$ | $25 \%$ | $8 \%$ |

*Since the 2017 sample collected the information for the father and mother rather than the noncustodial parent and the custodial person, it is assumed that the father was the noncustodial parent and the mother was the custodial person in 2017 for comparability only. The 2017 data also indicated this was the situation for the majority of sampled orders.

Exhibit 6: Gross Incomes of the Custodial Persons (\% of orders unless noted)

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private <br> Orders <br> $(\mathbf{n}=\mathbf{2 7 7})$ | DCSS <br> Orders <br> $(\mathbf{n}=195)$ | Private <br> Orders <br> $(\mathbf{n}=97)$ | DCSS <br> Orders <br> $(\mathbf{n}=85)$ |
| Custodial Person's Monthly Income* |  |  |  |  |
| Average | $\$ 3,544$ | $\$ 2,029$ | $\$ 2,535$ | $\$ 1,701$ |
| Median | $\$ 2,662$ | $\$ 1,709$ | $\$ 1,820$ | $\$ 1,262$ |
| Minimum | $\$ 0$ | $\$ 0$ | $\$ 0$ | $\$ 0$ |
| Maximum | $\$ 31,250$ | $\$ 10,290$ | $\$ 15,689$ | $\$ 5,671$ |
| Custodial Person's Monthly Income* |  |  |  |  |
| \$0 | $2 \%$ | $1 \%$ | $2 \%$ | $4 \%$ |
| $\$ 1-\$ 1,000$ | $4 \%$ | $6 \%$ | $3 \%$ | $2 \%$ |
| $\$ 1,001-\$ 2,000$ | $30 \%$ | $56 \%$ | $49 \%$ | $73 \%$ |
| $\$ 2,001-\$ 3,000$ | $21 \%$ | $22 \%$ | $22 \%$ | $9 \%$ |
| $\$ 3,001-\$ 4,000$ | $16 \%$ | $10 \%$ | $8 \%$ | $8 \%$ |
| $\$ 4,001-\$ 5,000$ | $8 \%$ | $4 \%$ | $7 \%$ | $2 \%$ |
| More than \$5,000 | $19 \%$ | $2 \%$ | $9 \%$ | $1 \%$ |

*The 2017 information is from Exhibit 10 of the 2018 report, which reported the income ranges of mothers and fathers, rather than by custodial persons. Not all custodial persons are mothers. This limits any conclusions that may be reached from comparing the statistics of the 2021 sample to the 2017 sample.

Although there was no significant change to the noncustodial parent's median income over time, custodial parent's median income increased. It increased from $\$ 1,820$ gross per month in 2017 to $\$ 2,662$ gross per month in 2021 among private orders; and, increased from $\$ 1,262$ gross per month in 2017 to $\$ 1,709$ gross per month in 2021 among DCSS orders. The increase may reflect societal increases in female incomes over time, increased incidence of income imputation to custodial parents, something other, or a combination of factors. The increased percentage of custodial parents with incomes more
than $\$ 5,000$ gross per month suggests that earnings of custodial parents with private orders are indeed increasing. Almost one out of five (19\%) custodial parents with private orders had incomes more than \$5,000 gross per month in 2021 compared to only 9 percent in 2017.

The average combined income of the private orders was $\$ 8,131$ per month and the average among DCSS orders was $\$ 4,234$ per month. A quarter of private orders had incomes in excess of $\$ 10,000$ per month and only 2 percent of DCSS orders had incomes in excess of $\$ 10,000$ per month. Only one percent of sampled orders had incomes in excess of $\$ 30,000$ per month, which is the highest income considered in the table.

Other income data that were collected noted self-employment and residual social security disability Only 3 percent of parents with private cases had self-employment income. The percentage didn't vary among noncustodial and custodial parents. None of the parents with DCSS orders had self-employment income. The amount of self-employed income was not large. The median income from self-employment was $\$ 2,089$ gross per month among noncustodial parents with private orders and $\$ 1,121$ gross per month among custodial parents with private orders. Residual Social Security Disability Insurance (RSDI) benefits can complicate the child support calculation when the obligated parent is eligible for Social Security Disability Insurance (SSDI) benefits and the custodial parent also receives RSDI on behalf of the obligated parent's disability for the benefit of the child. The receipt of RSDI does not affect the amount of SSDI received by the obligated parent. The Georgia guidelines, like most states guidelines addressing RSDI, provides that the RSDI shall be applied against the final child support amount. The incidence of RSDI is small: about 1 percent of DCSS orders had RSDI and no private orders had RSDI.

## Income Imputation

Federal regulation requires the consideration of income imputation rates. This was part of the 2016 rule changes. It reinforces another requirement (shown below) added in 2016 for state guidelines to consider the actual incomes of the parents; and to limit income imputation.

> 45 C.F.R. 302.56 (1)(c)(i) If imputation of income is authorized, takes into consideration the specific circumstances of the noncustodial parent (and at the State's discretion, the custodial parent) to the extent known, including such factors as the noncustodial parent's assets, residence, employment and earnings history, job skills, educational attainment, literacy, age, health, criminal record and other employment barriers, and record of seeking work, as well as the local job market, the availability of employers willing to hire the noncustodial parent, prevailing earnings level in the local community, and other relevant background factors in the case

Georgia has adapted the federal language; and, Child Support Commission staff intends to make the topic part of its continuous training. Exhibit 7 shows that income imputation to noncustodial parents has increased from 11 percent of DCSS orders in 2017 to 48 percent of DCSS orders in 2021. Income imputation at full-time, minimum-wage earnings to noncustodial parents alone increased from 1 percent of the DCSS orders to 35 percent of the DCSS orders. Similarly, income imputation at full-time, minimum-wage earnings to custodial parents has increased. The rate of income imputation to noncustodial parents with private orders has also increased (but not as much as it has for DCSS orders) and there is no increase in the rate of income imputation to custodial parents. The overall income imputation rate across private and DCSS orders is 25 percent.

Exhibit 7: Income Imputed to Party (\% of orders unless noted)

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private Orders $(\mathrm{n}=277)$ | DCSS <br> Orders $(n=195)$ | Private Cases ( $\mathrm{n}=101$ ) | DCSS <br> Orders $(n=89)$ |
| Income Imputed to Noncustodial Parent <br> No <br> Yes <br> - Minimum Wage <br> - Lower than Minimum Wage <br> - Higher than Minimum Wage | $\begin{aligned} & 87 \% \\ & 13 \% \\ & 10 \% \\ & 1 \% \\ & 2 \% \end{aligned}$ | $\begin{aligned} & 52 \% \\ & 48 \% \\ & 35 \% \\ & 6 \% \\ & 7 \% \end{aligned}$ | 97\% <br> 3\% <br> 1\% <br> 2\% <br> 0\% | $\begin{aligned} & 89 \% \\ & 11 \% \\ & 1 \% \\ & 9 \% \\ & 1 \% \end{aligned}$ |
| Income Imputed to Custodial Person <br> No <br> Yes <br> - Minimum Wage <br> - Lower than Minimum Wage <br> - Higher than Minimum Wage | $\begin{array}{r} 86 \% \\ 14 \% \\ 10 \% \\ 2 \% \\ 2 \% \end{array}$ | 49\% <br> 51\% <br> 37\% <br> 5\% <br> 8\% | 86\% <br> 14\% <br> 3\% <br> 2\% <br> 9\% | $\begin{aligned} & 74 \% \\ & 26 \% \\ & 7 \% \\ & 9 \% \\ & 10 \% \end{aligned}$ |

* Since the 2017 sample collected the information for the father and mother rather than the noncustodial parent and the custodial person, it is assumed that the father was the noncustodial parent and the mother was the custodial person in 2017 for comparability only. The 2017 data also indicated this was the situation for the majority of sampled orders.

The Covid-19 pandemic may have indirectly contributed to the spike in income imputation. In 2020, the pandemic caused record high unemployment and reduced hours. Service sector industries and lowpaying jobs were extremely hard hit. Although it is unknown how many parent's employment situations were adversely affected by the pandemic, if indeed a parent lost their job or had their workhours reduced in 2020 or 2021 that would be part of the parent's employment and income history. A child support action finalized in September or October 2021, which are the sampling months, could have relied on employment and income histories when the pandemic was forcing lay-offs and reduced hours. For parents in the low-paying jobs with erratic employment history, income imputation may have been deemed appropriate (and income imputation at full-time, minimum wage) particularly given the abundance of jobs available now. Still, as discussed in the labor market analysis, many low-paying jobs offer less than 40-hour workweeks, and may not even work all 52 weeks of the year.

Some of the states neighboring Georgia have collected and analyzed data on income imputation rates. Neighboring states had slightly lower income imputation rates, but each state's sample was drawn before the pandemic. For its last review, Florida examined orders that were established in 2017 that were part of the state child support caseload. Using minimum wage as a proxy, the Florida researchers believed that 41 percent of orders had income imputation. ${ }^{22}$ Also relying on case file data from its statewide automated system, Tennessee examined orders that were established or modified in 2015. It found an income imputation rate of 24 percent. ${ }^{23}$ Relying on 2018 case file data from its state

[^7]automated system, Alabama used two different methods to measure income imputation. ${ }^{24}$ One was a data field from their automated system, which indicated a 4 percent income imputation. However, because that field is not typically populated (partly because workers posting the information do not always have definitive information on whether income was imputed from the courts), the percentage of obligated parents with minimum-wage earnings was also identified as possibly having income imputed. That percentage was 31 percent. No published data were available from the neighboring states of North Carolina and South Carolina.

## Deduction from Income for Other Children

The Georgia guidelines allow for an adjustment to a parent's income for other children. If the other children are covered by another order, the parent's income can be adjusted by the order amount. If the children live with the parent, the parent's income may be adjusted by a theoretical order for those children. Exhibit 8 shows the frequencies of income adjustments for other children. They are most common among noncustodial parents with DCSS orders. About a third (31\%) of noncustodial parents with DCSS orders had adjustments. The adjustment average is $\$ 497$ per month among noncustodial parents with DCSS orders.

Exhibit 8: Parents with Income Deductions for Theoretical and Pre-Existing Orders

|  | Noncustodial Parent |  | Custodial Party |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private <br> Orders <br> $(\mathbf{n}=\mathbf{2 7 7})$ | DCSS <br> Orders <br> $(\mathbf{n}=195)$ | Private <br> Order <br> $(\mathbf{n}=\mathbf{2 7 7 )}$ | DCSS <br> Order <br> $(\mathbf{n}=\mathbf{1 9 5})$ |
| Percentage with Theoretical or Pre-Existing Orders |  |  |  |  |
| Has Pre-Existing Order | $4 \%$ | $15 \%$ | $0.5 \%$ | $1 \%$ |
| Has Theoretical Order Only | $4 \%$ | $13 \%$ | $3 \%$ | $5 \%$ |
| Has Both Pre-Existing and Theoretical Order | $1 \%$ | $3 \%$ | $0 \%$ | $0 \%$ |
| Neither Pre-Existing nor Theoretical Order | $91 \%$ | $69 \%$ | $97 \%$ | $95 \%$ |

## Obligated Parent's Share of Combined Income

The obligated parent's share of combined income is an important determinant to the order amount in the child support calculation. A parent with a larger share has more financial responsibility for the child. Exhibit 9 shows that the obligor's share among private orders decreased over time. Undoubtedly, this reflects increases in the incomes of custodial parents with private orders. The obligor's share of combined income among DCSS orders is generally unchanged.

[^8]Exhibit 9: Obligated Parent's Share of Combined Parental income (\% of orders unless noted)

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private Orders $(\mathrm{n}=277)$ | $\begin{gathered} \hline \text { DCSS } \\ \text { Orders } \\ (n=195) \\ \hline \end{gathered}$ | Private Orders $(\mathrm{n}=97)$ | DCSS <br> Orders $(\mathrm{n}=85)$ |
| Noncustodial Parent's Share of Combined Income* <br> Average <br> Median <br> Minimum <br> Maximum | $\begin{gathered} 52 \% \\ 50 \% \\ 16 \% \\ 100 \% \end{gathered}$ | $\begin{gathered} 56 \% \\ 56 \% \\ 7 \% \\ 100 \% \end{gathered}$ | $\begin{aligned} & 61 \% \\ & 61 \% \\ & 20 \% \\ & 90 \% \end{aligned}$ | $\begin{gathered} 57 \% \\ 51 \% \\ 36 \% \\ 100 \% \end{gathered}$ |

*Since the 2017 sample collected the information for the father and mother rather than the noncustodial parent and the custodial person, it is assumed that the father was the noncustodial parent and the mother was the custodial person in 2017 for comparability only. The 2017 data also indicated this was the situation for the majority of sampled orders

Order Amounts, Medical Support, and Add-Ons for Childcare and Healthcare Coverage Exhibit 10 shows the average and median order amounts. The 2021 median order amount is $\$ 470$ per month among private orders and $\$ 374$ per month among DCSS orders. Both medians are slightly more than the 2017 medians, but the increase is nominal; that is, there is not a significant increase in order amounts over time. The percentage of orders over $\$ 700$ per month among private orders has increased, however, from 25 percent among 2017 private sampled orders to 29 percent among 2021 private sampled orders.

Exhibit 10: Monthly Order Amounts (\% of orders unless noted)

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |
|  | $\begin{aligned} & \hline \text { Private } \\ & \text { Orders } \\ & (\mathrm{n}=277) \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { DCSS } \\ & \text { Orders } \\ & (\mathrm{n}=195) \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { Private } \\ & \text { Orders } \\ & (\mathrm{n}=97) \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { DCSS } \\ & \text { Orders } \\ & (\mathrm{n}=85) \end{aligned}$ |
| Current Support Order <br> Average <br> Median <br> Minimum <br> Maximum | $\begin{gathered} \$ 537 \\ \$ 470 \\ \$ 0 \\ \$ 4,825 \end{gathered}$ | $\begin{gathered} \$ 409 \\ \$ 374 \\ \$ 0 \\ \$ 1,702 \end{gathered}$ | $\begin{gathered} \$ 494 \\ \$ 437 \\ \$ 0 \\ \$ 1,600 \end{gathered}$ | $\begin{gathered} \$ 423 \\ \$ 364 \\ \$ 0 \\ \$ 2,151 \end{gathered}$ |
| Amount of Current Support $\$ 0 / \mathrm{mo}$ $\$ 1-200 / \mathrm{mo}$ $\$ 201-300 / \mathrm{mo}$ $\$ 301-400 / \mathrm{mo}$ $\$ 401-500 / \mathrm{mo}$ $\$ 501-600 / \mathrm{mo}$ $\$ 601-700 / \mathrm{mo}$ More than $\$ 700 / \mathrm{mo}$ | $\begin{gathered} 23 \% \\ 4 \% \\ 7 \% \\ 10 \% \\ 12 \% \\ 10 \% \\ 5 \% \\ 29 \% \\ \hline \end{gathered}$ | $\begin{gathered} 1 \% \\ 12 \% \\ 26 \% \\ 19 \% \\ 16 \% \\ 12 \% \\ 4 \% \\ 9 \% \end{gathered}$ | $\begin{gathered} 15 \% \\ 8 \% \\ 13 \% \\ 12 \% \\ 8 \% \\ 10 \% \\ 8 \% \\ 25 \% \end{gathered}$ | $\begin{gathered} 3 \% \\ 9 \% \\ 27 \% \\ 27 \% \\ 7 \% \\ 6 \% \\ 8 \% \\ 13 \% \end{gathered}$ |

The increase in zero orders among private orders is also noteworthy. The percentage of private orders set at zero has increased from 15 percent in 2017 to 23 percent in 2021. As discussed later, many shared physical custody cases deviate to a zero order.

## Add-ons for the Cost of the Childcare and Health Insurance

The Georgia child support table does not include the cost of work-related child care or the out-of-pocket cost of the child's health insurance. Instead, the actual amount expended on these items is to be prorated between the parents in the child support calculation on a case-by-case basis. The parent incurring the direct expense receives a credit and the other parent has an additional amount of support owed. Exhibit 11 and Exhibit 12 shows more detail about child care expenses and healthcare coverage, respectively. Adjustments for work-related child care expenses were infrequent: 10 percent of private orders and 4 percent of DCSS orders. Child care expenses would not be incurred for older children, the parents coordinate child care or for another reason. The average cost of child care was about $\$ 500$ per month for both private orders and DCSS orders. The maximum cost of child care was $\$ 1,600$ per month.

Exhibit 11: Percentage of Orders Adjusted for Child Care and Parent Incurring the Expense

|  | 2021 Sample |  |
| :---: | :---: | :---: |
|  | Private Orders <br> $\mathbf{( n = 2 7 7 )}$ | DCSS Orders <br> $(\mathbf{n}=195)$ |
| Provides Child Care |  |  |
| Father | $1 \%$ | $2 \%$ |
| Mother | $8 \%$ | $2 \%$ |
| Both parents | $1 \%$ | $0 \%$ |
| Neither | $90 \%$ | $96 \%$ |

Federal regulation requires that state guidelines address the healthcare coverage of the child. Exhibit 12 shows that the father or the mother is ordered to provide healthcare coverage among private and DCSS orders. This includes orders where the parent may not have healthcare coverage currently, but the order provides that the children can be automatically enrolled if healthcare coverage does indeed become available to the parent at a reasonable cost. Federal regulation provides for this automatic enrollment. Exhibit 12 also shows only 1 percent of private orders with Medicaid coverage and no DCSS orders with Medicaid coverage. To be clear, this is what is noted in the child support order as healthcare coverage for the children. The children may actually be enrolled in Medicaid, but it is not part of the child support order. Exhibit 12 also shows that just over a third (38\%) of private orders and 7 percent of DCSS orders included adjustment for the cost of insuring the child in the child support calculation. It is unknown how many parents with private insurance have no cost of adding healthcare coverage for the children.

Exhibit 12: Source of Healthcare Coverage and Cost if Private

|  | 2021 Sample |  |
| :---: | :---: | :---: |
|  | Private Orders <br> $(\mathbf{n}=\mathbf{2 7 7})$ | DCSS Orders <br> $(\mathbf{n}=\mathbf{1 9 5})$ |
| Provides Health Insurance as Noted in Order |  |  |
| Father | $43 \%$ | $85 \%$ |
| Mother | $42 \%$ | $15 \%$ |
| Both parents | $4 \%$ | $0 \%$ |
| Neither Parent | $4 \%$ | $0 \%$ |
| Medicaid | $1 \%$ | $0 \%$ |
| Unknown | $6 \%$ | $1 \%$ |
| Adjustment for the Cost Health Insurance |  |  |
| Yes | $38 \%$ | $7 \%$ |
| No | $62 \%$ | $93 \%$ |
| Cost of Health Insurance (If Greater than \$0) | $(\mathrm{n}=106)$ | $(\mathrm{n}=14)$ |
| Average | $\$ 220$ | $\$ 118$ |
| Median | $\$ 160$ | $\$ 129$ |
| Minimum | $\$ 11$ | $\$ 17$ |
| Maximum | $\$ 1,600$ | $\$ 242$ |

The Georgia guidelines also provide that the parents share in the child's uninsured healthcare costs. The guidelines provide that the amount be prorated between the parents. Exhibit 13 shows that the expenses are usually shared equally between the parents (i.e., each parent is responsible for $50 \%$ on average).

Exhibit 13: Parent's Share of Future Uninsured Health Insurance

|  | Non-Custodial Parent |  | Custodial Party |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Private Orders ( $\mathrm{n}=277$ ) | DCSS Orders ( $n=194$ ) | Private Orders ( $\mathrm{n}=277$ ) | DCSS <br> Orders $(n=194)$ |
| Share of Future Uninsured Health Expenses <br> Average <br> Median <br> Minimum <br> Maximum | $\begin{gathered} 47 \% \\ 50 \% \\ 0 \% \\ 100 \% \end{gathered}$ | $\begin{gathered} 50 \% \\ 50 \% \\ 0 \% \\ 100 \% \end{gathered}$ | $\begin{gathered} 45 \% \\ 50 \% \\ 0 \% \\ 100 \% \end{gathered}$ | $\begin{gathered} 49 \% \\ 50 \% \\ 0 \% \\ 81 \% \end{gathered}$ |

## Order Amounts as a Percentage of Income

As identified in the OCSE narrative supporting the 2016 rule changes, research studies have found that orders set above 15-20 percent or more of an obligated parent's gross income have lower payments and accumulate arrears. ${ }^{25}$ Several subsequent studies have investigated the 20 -percent threshold. ${ }^{26}$ The

[^9]results are mixed: some corroborate the finding; and, others refute it. One study in particular points out that income imputation and default have a stronger correlation with non-payment and arrears accumulation than the order amount. Still, one of the general policy implementations of the research is that the amount of the order may matter more at low income where ability-to-pay is the major barrier. When ability-to-pay is the barrier, punitive enforcements (e.g., income withholding, driver's license suspension) can exacerbate payment issues and encourage earnings from unreported employment. In contrast, non-paying parents with higher incomes are more likely to have willingness-to-pay issues rather than ability-to-pay issues. ${ }^{27}$ In these cases, punitive enforcement may be more effective. One particular study on the 20-percent threshold clearly notes that higher-percentage orders may generate more dollars paid even when there isn't full compliance than lower-percentage orders paid in full. ${ }^{28}$ This finding coupled with how enforcement remedies function underscore the need to consider ability to pay.

Exhibit 14 shows the percentages of orders set at 20-percent and more and above 28 percent. (One of the OCSE-cited studies suggests that the threshold is 28 percent for two or more children.) It shows that 29 percent of DCSS one-child orders are set at 20-percent or more; and 85 percent of DCSS two-child orders are set at 28 percent or more. The percentages for private orders are considerably less: 12 percent and 40 percent, respectively.

Exhibit 14: Order as a Percentage of Obligor Gross Income

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |

## Default Orders

Exhibit 15 shows the default rates for sampled cases: 1 percent of private orders and 6 percent of DCSS orders from the 2021 sample. The default rates are generally low. Tennessee also found a low default rate (4\%). ${ }^{29}$ The other states bordering Georgia did not collect default data.

## Guidelines Deviations including Deviations for Low Income

Exhibit 16 shows Georgia's deviation criteria and Exhibit 17 shows the rate of deviation detected from the 2021 case file data.

Exhibit 16: Georgia's Deviation Criteria
In the court's or the jury's discretion, deviations may include, but shall not be limited to, the following:
(A) High income;
(B) Low income;
(C) Other health related insurance;
(D) Life insurance;
(E) Child and dependent care tax credit;
(F) Travel expenses;
(G) Alimony;
(H) Mortgage;
(I) Permanency plan or foster care plan;
(J) Extraordinary expenses;
(K) Parenting time; and
(L) Nonspecific deviations;

The overall deviation rate was 32 percent based on the 2021 data, which is significantly less than the deviation rate from the last review: 41 percent. The deviation rate among private orders remained unchanged. All of the decrease can be attributed to a reduction in DCSS deviations.

The overall deviation rate from the 2021 sample is 32 percent. This is lower than the deviation rate from the previous review.

The deviation rate in neighboring states were 9 percent in Alabama, ${ }^{30}$ and 4 percent among new orders in Tennessee. ${ }^{31}$ Florida didn't report a specific rate, but called its deviation rate "minimal." ${ }^{32}$ All of these state only sampled from what be equivalent to DCSS orders. None of these states sampled private orders. Nonetheless, a key difference between Georgia and these neighboring states is that each of the neighboring states has a presumptive low-income adjustment.

[^11]Exhibit 17: Deviations from Child Support Guidelines

|  | 2021 Sample |  | 2017 Sample |  |
| :---: | :---: | :---: | :---: | :---: |

| Reason for Guidelines Deviation* <br> Other <br> Parenting time <br> Health-related Insurance <br> Visitation-related travel expenses <br> Extraordinary educational expenses <br> Life Insurance <br> Special expenses for child rearing <br> Mortgage <br> Alimony <br> Low income <br> High income | $\begin{gathered} \hline(\mathrm{n}=129) \\ 55 \% \\ 27 \% \\ 5 \% \\ 8 \% \\ 1 \% \\ 1 \% \\ 2 \% \\ 0 \% \\ 2 \% \\ 3 \% \\ 1 \% \end{gathered}$ | $(n=21)$ $43 \%$ $0 \%$ $14 \%$ $5 \%$ $5 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $33 \%$ $0 \%$ | $(n=39)$ $49 \%$ $23 \%$ $0 \%$ $10 \%$ $8 \%$ $8 \%$ $5 \%$ $5 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ | $(n=29)$ $93 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ $0 \%$ |

* Total may be greater than $100 \%$ due to selecting from multiple reasons

The most frequently specified deviation reason among private orders was parenting time. It comprised 23 percent of the deviations in 2017 and 27 percent of the deviations in 2021. As a percentage of all private orders, 13 percent of all private orders had a deviation for parenting time clearly stated in the order. The incomes of both the obligated parent and the custodial parent with parenting-time deviations were more than the average incomes of all obligated parents and custodial parents, respectively. Most parenting-time deviations were downward. The average final order was $\$ 273$ per month and the median final order was zero.

The most frequently specified deviation reason among DCSS orders was low income. It comprised 33 percent of the deviations in 2021 and none of the deviations in 2017. When considering all DCSS orders, 4 percent had a deviation for low income. The median income of noncustodial parents with low-income deviations was $\$ 1,262$ per month, which is close to full-time, minimum wage earnings. The average final order among low-income deviated orders was $\$ 230$ per month and the median order amount was $\$ 100$, which is the minimum order amount for one child.

Most of the deviations did not specifically name one of the factors listed in the guidelines such as parenting-time or low-income as a reason for the deviation. They are shown as "other" in Exhibit 17. Over half of the deviations in private orders were coded "other" and 43 percent of DCSS orders were coded "other." Still, other" may have encompassed one of the listed factors. Of particular concern is that a deviation for "other" comprised 26 percent of all private orders sampled. More detail would be helpful to understand why the guidelines are not being applied in these cases. As is, the only things that stand out in these cases are that the custodial parents have more income than average, the incomes of the parents are close to equal, the final order was zero in about 40 percent of these deviations. Another
interesting outcome was that the deviation rate was higher, the greater the combined income of the parties.

Most deviations were downward: 81 percent of deviations among private orders were downward and 86 percent of deviations among DCSS orders were downward. The median amount of the deviation was $\$ 277$ among deviations among private orders and \$104 among deviations among DCSS orders.

## Analysis of Payment Data

Federal regulation requires the analysis of payment data. Payment data are only available for DCSS orders. Payment data were tracked from the first month due (which was generally November or December 2021 depending on the court date and the start date) through March 2022. Payments were averaged to obtain a monthly amount.

Exhibit 18 compares the average and median payments between the 2021 and 2017 DCSS sampled cases with payments. ${ }^{33}$ Almost all (77\%) of the 2021 DCSS sampled orders had payment. The average and median dollar amount paid is generally unchanged between the two time periods, but the percentage paid (compliance rate) has increased (e.g., the average increased from 72 percent in 2017 to 78 percent in 2021). To be clear, the compliance rate is computed on a case-by-case level and should not be confused with the federal performance measure that considers the percentage of current support paid, which is calculated differently (i.e., it is calculated as the ratio of the aggregate amount paid divided by the aggregate amount due). It is also calculated for all orders not just newly established or modified orders.

Exhibit 18: Average and Median Payments among DCSS Orders with Payment Data

|  | 2021 DCSS Sample <br> $(\mathbf{n}=\mathbf{1 4 1})$ | 2017 DCSS Sample <br> $(\mathbf{n}=64)$ |
| :---: | :---: | :---: |
| Monthly Payment |  |  |
| Average | $\$ 350$ | $\$ 330$ |
| Median | $\$ 289$ | $\$ 262$ |
| Minimum | $\$ 4$ | $\$ 5$ |
| Maximum | $\$ 1,301$ | $\$ 463$ |
| Average Monthly Payment |  |  |
| \$1 - \$100 | $15 \%$ | $17 \%$ |
| \$101- \$200 | $16 \%$ | $23 \%$ |
| \$201 - \$300 | $21 \%$ | $14 \%$ |
| \$301 - \$400 | $14 \%$ | $11 \%$ |
| More than \$400 | $34 \%$ | $35 \%$ |
| Compliance Rate |  |  |
| Average | $78 \%$ | $72 \%$ |
| Median | $89 \%$ | $80 \%$ |

Federal regulation also requires the analysis of payment data when income was imputed, the order was entered by default, and for orders in which the low-income adjustment was applied. Exhibit 19

[^12]compares payment data by orders with and without income imputed and by the amount of income imputed. The average amount paid is greater among those without income imputation. This may be caused by other factors in the case other than income imputation. There were only 12 default cases with payment information. The average amount paid in these default cases was $\$ 441$ per month. There were only three orders in which a low-income deviation was noted that had payment data.

Exhibit 19: Average and Median Payments by Income Imputation

|  | 2021 DCSS Sample <br> $(\mathbf{n}=139)$ | 2017 DCSS Sample <br> $(\mathbf{n}=64)$ |
| :---: | :---: | :---: |
| Income Imputed to Obligor* |  |  |
| Yes, at Minimum Wage (\$1,257-\$1,261/month) | $\$ 211$ | $\$ 74$ |
| Yes, at Amount less than minimum wage | $\$ 74$ | $\$ 142$ |
| Yes, at amount more than minimum wage | $\$ 326$ | $\$ 149$ |
| No | $\$ 430$ | $\$ 256$ |

The analysis presented in Exhibit 20 considers both orders with payments and those with zero payments. It shows that the percentage making any payment is the least for those with income imputed at minimum wage. Just over half ( $52 \%$ ) with income imputed at minimum wage made any payment; whereas 70 percent of those with income imputed below minimum wage and 92 percent of those with income imputed above minimum wage made any payment. It may be that more information is known about the circumstances of the noncustodial parent when income is imputed at an amount other than minimum wage.

Exhibit 20: Average and Median Payments by Income Imputation

|  | Percentage Making Any <br> Payment ( $\mathbf{n}=\mathbf{1 8 4}$ ) | Compliance Rate ( $\mathbf{n = 1 8 4 )}$ |
| :--- | :---: | :---: |
| All Orders | $77 \%$ | $59 \%$ |
| Income Imputed to Obligated Parent |  |  |
| Yes, at Minimum Wage (\$1,257-\$1,261/month) | $52 \%$ | $37 \%$ |
| Yes, at Amount less than minimum wage | $70 \%$ | $34 \%$ |
| Yes, at amount more than minimum wage | $92 \%$ | $69 \%$ |
| No | $93 \%$ | $78 \%$ |

## Findings from the Analysis of Labor Market Information

Federal regulation (45 C.F.R. § $302.56(\mathrm{~h})(1)$ ) requires the consideration of:
. . . labor market data (such as unemployment rates, employment rates, hours worked, and earnings) by occupation and skill-level for the State and local job markets, the impact of guidelines policies and amounts on custodial and noncustodial parents who have family incomes below 200 percent of the Federal poverty level, and factors that influence employment rates among noncustodial parents and compliance with child support orders . . .

The review of labor market data appears to be aimed at informing recommendations for guidelines provisions for income imputation and low-income adjustments. Recent national research found that one-third ( 35 percent) of nonresidential parents not living with one or more of their children under age

21 had incomes below 200 percent of poverty. ${ }^{34}$ These low-income nonresident parents were more likely to not work full-time and year-round than moderate- and higher-income nonresident parents were. About a quarter ( 27 percent) of low-income, noncustodial parents worked full-time year-round compared to 73 percent of moderate- and higher-income nonresident parents. An examination of labor market data helps inform why this occurs.

Further, one of the federal requirements adopted in 2016 (which the existing Georgia guidelines meets) centers around considering the actual circumstances of the obligated parent when income imputation is authorized. This includes consideration of the employment opportunities available to the parent given local labor market conditions. The analysis in this section helps explains what employment opportunities are available statewide and locally.

The primary data sources for this section include the Georgia Department of Labor (GDOL) ${ }^{35}$ and U.S. Bureau of Labor Statistics. Much of this analysis was conducted in August 2022. New data on Georgia unemployment rates and labor force numbers will be available when this report is released for publication.

## Unemployment and Employment Rates and Labor Force Participation

The official measurement of unemployment, known as $\mathrm{U}-3$, includes "all jobless persons who are available to take a job and have actively sought work in the past four weeks." ${ }^{36}$ It is measured as a percentage of those in the civilian labor force, which includes employed and unemployed individuals. ${ }^{37}$ To be employed: a person must have worked at least one hour as a paid employee or self-employed or been temporarily absent from their job or business or met other criteria. Actively seeking work means contacting an employer about a job opportunity, submitting a job application or resume, using an employment service, or a similar activity. Persons not in the labor force may not want a job, are not currently available for work, or available for work but haven't looked in the last four weeks and may be a "discouraged worker" (i.e., don't believe a job exists).

As of June 2022, the U.S. unemployment rate (seasonally adjusted) was 3.6 percent while the Georgia unemployment rate was 2.9 percent. ${ }^{38}$ The unemployment rate varied by county. Six counties had unemployment rates above 5.0 percent: 6.0 percent in Burke County; 8.0 percent in Clay County; 5.5 percent in Hancock County; 6.2 percent in Telfair County; and 5.2 percent in Wheeler County. ${ }^{39}$ Still over a dozen counties had unemployment rates less than 3 percent. The unemployment rate also varied

[^13]slightly among Metropolitan Statistical Areas (MSA): the Albany MSA had the highest unemployment rate (4.3\%) and the Gainesville MSA had the lowest unemployment rate (2.5\%). ${ }^{40}$ All unemployment rates are lower than their April 2020 high, which occurred during the COVID-19 pandemic quarantine. In April 2020, the U.S. seasonally-adjusted unemployment rate was 14.7 percent and the Georgia unemployment rate was 12.3 percent.

## Labor Force Participation

As of June 2022, the Georgia civilian labor force was 5,289,765 with 5,134,566 employed and 155,199 unemployed. The Atlanta MSA comprised 61 percent of the statewide civilian labor force as well as 61 percent of Georgia's employed workforce and 61 percent of Georgia's unemployed workforce. The Georgia workforce participation rate was 62.3 percent as of June $2022 .{ }^{41}$ The highest rate in the past two decades was 68.5 percent (April 2003). After that, the Georgia labor force participation rate steadily declined until it reached a low point in June 2016 of 62.3 percent, then increased for a few years to 64 percent as of August 2017. It declined after that, and plummeted with the onset of the COVID-19 pandemic reaching its low as of September 2020 at 59.4 percent. In contrast, the U.S. labor force participation rate was 62.1 percent as of July 2022. ${ }^{42}$ Labor force participation generally declined with the pandemic and has recently risen. For example, the U.S. labor force participation rate was 63.4 percent as of February 2020, which was just before the pandemic began, and plummeted to 60.2 percent as of April 2020.

A U.S. Bureau of Labor Statistics study found that about 7 percent of those not in the labor force nationally as of July 2021 were prevented from looking for work because of the pandemic. ${ }^{43}$ Other studies find the rebound rates vary by age. For example, workers of retirement age have not returned to the labor force, but very young workers have. ${ }^{44}$ In fact about half of the decline nationally in the labor force is among workers over 55 years of age.

A Brookings Institute report suggests that women dropped from labor force participation to care for young children during the pandemic. ${ }^{45}$ The report found a six percent drop in the participation rate among women with young children while the drop was only four percent among women and men without young children. It also found some but a modest association between decreases in female labor

[^14]force participation and the share of children in virtual or hybrid schooling in a given state. A Federal Reserve study estimates that one third of the overall decline in the labor force participation rate during the pandemic is attributable to caretaking, but not always parents caretaking their own minor children. ${ }^{46}$

The relevance to child support is whether these are valid reasons not to impute income to employable parents who are not working. Some state guidelines actually have provisions that address extreme circumstances that share some similarities to the pandemic. For example, the Louisiana guidelines specifically mention that a party temporarily unable to find work or temporarily forced to take a lowerpaying job as a direct result of Hurricanes Katrina or Rita shall not be deemed voluntarily unemployed or underemployed. ${ }^{47}$ Similarly, "a natural disaster" is one of the circumstances to be considered to ensure that the obligated parent is not denied a means of self-support or a subsistence level in the Indiana guidelines. ${ }^{48}$

## Other Unemployment Measures

The unemployment rates above reflect the official unemployment rate (the U-3 measurement), which only measures the total percentage of the civilian labor force that is unemployed. The U.S. Bureau of Labor Statistics, however, has developed alternative measures that better reflect all persons who are unemployed, including those who are marginally attached workers (i.e., those who want to work but are discouraged and not looking) and workers employed part-time but who would work full-time if they could. The average Georgia unemployment rate in the third quarter of 2021 through the second quarter of 2022 , according to this measure (called the $\mathrm{U}-6$ ), is 6.7 percent, while the national rate of 7.6 percent. ${ }^{49}$

## Hours Worked and Income Imputation

Hours worked has been used to inform income imputation policies. For example, South Dakota used labor market data on hours worked to reduce the presumption of a 40-hour workweek when imputing income since labor market data indicates South Dakota workers usually work 35 hours per week. In May 2022, the average workweek in Georgia private industries was 35.1 hours. ${ }^{50}$ However, it varied by industry: it averaged 41.5 hours per week in construction; 33.9 hours per week in trade, transportation, and utilities; and 27.2 hours in leisure and hospitality. It also varied by region. The Rome Metropolitan

[^15]Statistical Area (MSA) had the highest average weekly hours in May 2022 ( 35.6 hours per week) while the Hinesville MSA had the least (29.8 hours).

## Factors Affecting Full-Time, Year-Round Work among Low-Wage Earners

There are many factors that contribute to the lack of full-time, year-round work. Some pertain to the employability of a parent, and other factors pertain to the structure of low-wage employment. A national study found that the highest educational attainment of 60 percent of the low-income, nonresident parents was a high school degree or less. ${ }^{51}$ Obligated parents also face other barriers to employment. A multisite national evaluation of obligated parents in a work demonstration program provides some insights on this. ${ }^{52}$ It found that 64 percent of program participants had at least one employment barrier that made it difficult to find or keep a job. Common employment barriers consisted of problems getting to work ( 30 percent), criminal records ( 30 percent), and lack of a steady place to live (20 percent). Other employment barriers noted not having the skills sought by employers, taking care of other family members, health issues, and alcohol or drug problems. Many of the participants also cited mental health issues, but few noted it as being a major barrier to employment.

Low-wage jobs do not always provide consistent hours week to week or an opportunity to work every week of the year. This causes unpredictable and erratic income, which can affect child support compliance. Over half (58 percent) of national workers are paid hourly. ${ }^{53}$ As mentioned previously, the usual weekly hours are considerably less in some industries (e.g., leisure and hospitality). A Brookings Institute study defines vulnerable workers as those earning less than median earnings and having no healthcare benefits. ${ }^{54}$ Most vulnerable workers are concentrated in the hospitality, retail, and healthcare sectors. There is considerable turnover in some of these industries. For example, the leisure and hospitality industry has an annual quit rate of 55.4 percent and a 21.5 percent annual rate of layoffs and discharges. ${ }^{55}$ High levels of turnover contribute to periods of non-work that can depress earnings.

The lack of healthcare benefits also contributes to fewer hours, fewer weeks worked, and voluntary and involuntary employment separations. Only one-third of workers in the lowest 10th percentile of wages have access to paid sick time, compared to 78 percent among all civilian workers. ${ }^{56}$ For those with access to paid sick time, the average is eight days per year. Similarly, those in the lowest 10th percentile

[^16]of wages are less likely to have access to paid vacation time: 40 percent have access, compared to 76 percent of all workers. Those with paid vacation time have an average of 11 days per year. Without paid sick time or vacation time, a worker may terminate employment voluntarily or be involuntarily terminated when the worker needs to take time off due to an illness or to attend to personal matters. If a parent without access to paid sick time and paid vacation time did not work for 19 days (which is the sum of the average number of paid sick days and paid vacation days), they would miss about four weeks of work throughout the year.

Another indicator of the economic challenges of low-wage parents is the percentage of households that cannot cover a $\$ 400$ emergency expense. A Federal Reserve survey finds that 36 percent of households could not cover a $\$ 400$ emergency expense in $2020 .{ }^{57}$ Although the Federal Reserve survey does not specifically address child support debt and considers all households and not just those where a household member owes child support, it is a salient finding when considering low-income obligated parents in a vulnerable labor market where automated child support enforcement actions (e.g., driver's license and professional license suspension) are triggered when child support is 30 days past due. The $\$ 400$ level in the Federal Reserve study is less than some child support orders.

## Top Employment Opportunities for High School Graduates

The Georgia Department of Labor identifies the top employment opportunities by highest educational attainment. ${ }^{58}$ Exhibit 21 shows the occupations for Georgia workers whose highest educational attainment is a high school degree. ${ }^{59}$ The Georgia Department of Labor also published the lowest paying jobs for Georgia in 2020. ${ }^{60}$ They were Amusement and recreation attendant (\$21,614 per year); host/hostess for restaurant, lounge or coffee shop ( $\$ 21,801$ per year); fast food and counter workers (\$22,679 per year); fast food cooks (\$22,706 per year); and childcare workers (\$22,989).

[^17]Exhibit 21: Selected Employment Projects for Georgia Workers with High School Degree

|  | Labor Force Exits | Occupational Transfers | Annual Openings | Annual <br> Wage |
| :---: | :---: | :---: | :---: | :---: |
| Customer Service Representatives | 5,190 | 8,680 | 15,910 | \$36,600 |
| Office Clerks, General | 3,960 | 4,310 | 9,280 | \$36,700 |
| Secretaries \& Administrative Assistants, Legal, Medical \& Executive | 3,290 | 3,610 | 7,440 | \$36,400 |
| Sales Representatives, Wholesale \& Manufacturing, Executive Technical \& Scientific Products | 1,310 | 3,000 | 6,010 | \$75,400 |
| Supervisors of Food Preparation \& Serving Workers | 1,480 | 3,380 | 5,740 | \$36,200 |
| Supervisors of Office \& Administrative Support Workers | 1,680 | 2,760 | 5,300 | \$60,300 |
| Light Truck on Delivery Services Drivers | 1,450 | 2,400 | 5,010 | \$41,400 |
| Maintenance \& Repair Workers, General | 1,480 | 2,440 | 4,890 | \$41,600 |
| Supervisors of Retail Sales Workers | 1,510 | 2,960 | 4,880 | \$47,100 |
| Security Guards | 1,580 | 2,310 | 4,750 | \$32,400 |

## Factors that Influence Employment Rates and Compliance

Federal regulation requires the consideration of factors that influence employment rates and compliance. There is some older academic research that finds child support can affect employment among obligated parents. ${ }^{61}$ Another study finds some weak association of changes in father's earnings with changes in orders among fathers in couples that had their first child support ordered in $2000 .{ }^{62}$ There also are many anecdotes of obligated parents who quit working or turn to unreported employment (also called the underground economy) once wages are garnished for child support.

These studies are of limited value for this analysis because they are dated (hence do not consider today's labor market and child support enforcement practices) and not specific to Georgia. The impact of the pandemic on employment may also overshadow other factors. Another issue is that opportunities for income from unreported employment are rapidly changing and even more difficult to research. Before the pandemic it was becoming more common to have multiple jobs where one may be unreported employment and the other may be reported employment. There is also evidence that selfemployment has increased since the pandemic began. All of these dynamics limit the ability to isolate the impact that child support may be having at this time.

[^18]Child support tables and formulas are part policy and part economic data. Most state guidelines rely on a study of child-rearing expenditures as the underlying basis of their child support table or formula. Federal regulation ( 45 C.F.R. § 302.56 (h)(1)) requires states to consider economic data on the cost of raising children as part of a state's child support guidelines review.

In addition to the economic study of child-rearing expenditures, there are several other economic factors considered in a child support table. For example, due to the time lags between data collection and publication of economic studies of child-rearing expenditures, most measurements are updated to reflect current price levels when converted to a child support table or formula. Still another example is that most studies of child-rearing expenditures measure child-rearing expenditures as a percentage of total household expenditures; hence, they must be converted from expenditures to gross income for states that rely on gross-income based guidelines. This is typically done using data on average expenditure ratios from the same dataset used to measure child-rearing expenditures and consideration of federal and state income tax and FICA withholding formulas.

The existing Georgia guidelines is based on the average of the Rothbarth estimate and the Engel estimate from expenditure data collected in 1996-1999. The estimates were updated to 2005 price levels and consider 2005 federal and state income tax rates and FICA.

This section first reviews the economic studies on child-rearing expenditures then lists and reviews each of the other factors considered when converting a study of child-rearing expenditures to a child support table or formula.

## Overview of Economic Studies

Exhibit 22 compares the findings from 19 studies of child-rearing expenditures. The studies vary in the data years considered and the methodology used to separate the child's share of expenditures from total household expenditures. Economists do not agree on which methodology best measures actual child-rearing expenditures. They generally agree that an amount between the lowest and the highest of credible measurements is an appropriate guidelines amount. The three methodologies shown in Exhibit 22 are the Rothbarth, Engel, and USDA methodologies. As discussed in more detail later, even economists using the same methodology and applying it to the same data years arrive at different results because of the nuanced differences in how they approach the methodology.

The existing Georgia guidelines is based on the average of the Rothbarth estimate and the Engel estimate from expenditure data collected in 1996-99. Both estimates were developed by Professor David Betson. Most states ( 31 states including all states neighboring Georgia except Florida) rely on one of the five Betson-Rothbarth studies shown in Exhibit 22 as the basis of their guidelines. Georgia is the only state to rely on a Betson-Engel study.

Exhibit 22: Comparison of Findings from Recent Studies of Child-Rearing Expenditures and Studies Underlying State Guidelines

| Economic Methodology | Economist and Data Years | Average Child-Rearing Expenditures as a Percentage of Total Expenditures |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1 Child | 2 Children | 3 Children |
| Rothbarth | Betson $^{63}$ $2013-2019$ $2004-2009$ $1998-2004$ $1996-1999$ $1980-1986$ | $\begin{aligned} & 24.9 \% \\ & 23.5 \% \\ & 25.2 \% \\ & 25.6 \% \\ & 24.2 \% \end{aligned}$ | $\begin{gathered} 38.4 \% \\ 36.5 \% \\ 36.8 \% \\ 35.9 \% \\ 34.2 \% \end{gathered}$ | $\begin{gathered} 47.0 \% \\ 44.9 \% \\ 43.8 \% \\ 41.6 \% \\ 39.2 \% \end{gathered}$ |
|  | Rodgers/Replication of Betson ${ }^{64}$ 2004-2009 CE | 22.2\% | 34.8\% | 43.2\% |
|  | Rodgers ${ }^{65}$ $2000-2015 \mathrm{CE}$ $2004-2009 \mathrm{CE}$ $2000-2011 \mathrm{CE}$ | $\begin{aligned} & 19.2 \% \\ & 21.5 \% \\ & 21.0 \% \end{aligned}$ | $\begin{aligned} & 24.1 \% \\ & 24.4 \% \\ & 25.0 \% \\ & \hline \end{aligned}$ | $\begin{aligned} & 30.8 \% \\ & 33.4 \% \\ & 31.0 \% \end{aligned}$ |
|  | Florida State University $\begin{aligned} & 2013-2019 C E^{66} \\ & 2009-2015 C E^{67} \end{aligned}$ | $\begin{aligned} & 21.3 \% \\ & 24.9 \% \end{aligned}$ | $\begin{gathered} 33.4 \% \\ 38.3 \% \\ \hline \end{gathered}$ | $\begin{aligned} & 41.4 \% \\ & 46.9 \% \\ & \hline \end{aligned}$ |
| Engel | $\begin{array}{r} \hline \text { Florida State University } \\ 2013-2019 \mathrm{CE} \\ 2009-2015 \mathrm{CE} \\ \hline \end{array}$ | $\begin{aligned} & 21.5 \% \\ & 20.3 \% \end{aligned}$ | $\begin{aligned} & 33.6 \% \\ & 32.6 \% \end{aligned}$ | $\begin{aligned} & 41.6 \% \\ & 41.4 \% \end{aligned}$ |
|  | $\begin{array}{r} \hline \text { Betson }^{68} \\ \text { 2013-2019 CE } \\ \text { 1996-1999 CE } \\ \text { 1980-1986 CE } \end{array}$ | $\begin{aligned} & 21.9 \% \\ & 32.0 \% \\ & 33.0 \% \end{aligned}$ | $\begin{aligned} & 34.4 \% \\ & 39.0 \% \\ & 46.0 \% \end{aligned}$ | $\begin{aligned} & 42.7 \% \\ & 49.0 \% \\ & 58.0 \% \end{aligned}$ |
|  | Espenshade ${ }^{69}$ 1972-73 CE | 24.0\% | 41.0\% | 51.0\% |
| USDA | $\begin{array}{r} \hline \text { USDA }^{70} \\ \text { 2011-2015 CE } \end{array}$ | 26.0\% | 39.0\% | 49.0\% |
| Point estimate from literature review | van der Gaag ${ }^{71}$ (no year specified) | 25.0\% | 37.5\% | 50.0\% |

[^19]Florida and seven other states ${ }^{72}$ still rely on Engel estimates developed by Dr. Thomas Espenshade in 1984. Another four states rely on the van der Gaag study published in 1981. ${ }^{73}$ Minnesota and Maryland partially rely on the USDA study. Kansas and New Jersey each rely on a unique study used only by their state. (The New Jersey study uses Rothbarth estimates, but they were realigned for New Jersey's above average income so inappropriate for use or consideration by any other state.) For a few states, the economic basis does not clearly relate to any particular study. ${ }^{74}$ The Rodgers and Florida State studies shown in Exhibit 22 are not used by any state. They are shown because they use recent expenditure data.

The results from each study examined in Exhibit 22 are expressed as an average percentage of total expenditures, which is how most researchers report their findings. Expenditures differ from gross income because of income taxes, savings, gifts outside the home, and other items. The percentage are for the average or mid-income range. To be clear, all estimates listed in Exhibit 22 consider child-rearing expenditures across a range of incomes; none examine the minimum and basic needs of children. This is because the premise of most state guidelines is that children should share in the lifestyle afforded by their parents; that is, if the obligated parent's income affords the obligated parent a higher standard of living, the support order should also be more for that higher income parent. Some of the studies also provide estimates that vary across a range of incomes. As way of comparison, however, Exhibit 22 focuses on the average or midpoint of each study.

Exhibit 22 shows the average percentages for one, two, and three children. The estimates for:

- One child range from 19.2 percent to 33.0 percent of total expenditures with most estimates falling in the range of 21 to 26 percent;
- Two children range from 24.1 percent to 46.0 percent of total expenditures with most estimates falling in the range of 33 to 37 percent; and
- Three children range from 30.8 percent to 51.0 percent of total expenditures with most estimates falling in the range of 41 to 45 percent.

Most economists limit their estimates to these family sizes because there are few families with four or more children in the Consumer Expenditure Survey (CE), which is the data set most economists use to measure child-rearing expenditures. For the purposes of developing child support formulas and tables, the three-child estimates are converted to amounts for four or more children using equivalence scales

[^20]that are developed by economists to adjust for family size. As an aside, the analysis of Georgia case file data found that among private cases: 54 percent cover one child, 36 percent cover two children, 8 percent cover three children, and 2 percent cover four or more children. Among Georgia DCSS cases, the frequency of orders by number of children is 76 percent cover one child, 17 percent cover two children, 5 percent cover three children, and 2 percent cover four or more children.

Overview of Economic Methodologies
When Congress first passed legislation (i.e., the Family Support Act of 1988) requiring presumptive state child support guidelines, they also mandated the U.S. Department of Health and Human Services to develop a report analyzing expenditures on children and explain how the analysis could be used to help states develop child support guidelines. This was fulfilled by two reports that were both released in 1990. One was by Professor David Betson, University of Notre Dame. ${ }^{75}$ Using five different economic methodologies to measure child-rearing expenditures, he concluded that the Rothbarth methodology was the most robust; ${ }^{76}$ hence, recommended that it be used for state guidelines.

At the time of Betson's 1990 study, most states were using Engel estimates developed in 1984 by Dr. Thomas Espenshade, which is also referenced in Exhibit 22. The Espenshade study formed the basis of the prototype income shares model developed through the National Child Support Guidelines project that was published in 1987. ${ }^{77}$ Many states adapted the prototype income shares model. Betson also estimated child-rearing expenditures using the Engel methodology for his 1990 study.

The Engel and Rothbarth methodologies are named after the economists who developed them. Both are considered marginal cost approaches; that is, they consider how much more is spent by a couple with children than a childless couple of child-rearing age. To that end, the methodologies compare expenditures of two sets of equally-well off families: one with children and one without children. The difference in expenditures between the two sets is deemed to be child-rearing expenditures. The Engel and Rothbarth methodologies use different indicators of equally well-off families. The Engel methodology uses expenditures on food, while the Rothbarth methodology relies on expenditures for adult goods to determine equally well-off families. ${ }^{78}$

The USDA methodology is considered a "direct" approach to measuring child-rearing expenditures, while both the Rothbarth and Engel methodologies are considered indirect approaches. Direct approaches attempt to enumerate expenditures for major categories of expenses (e.g., housing, food, transportation, clothing, healthcare, childcare and education, and miscellaneous expenses); then, add them together to estimate the total cost of raising children. The major limitation to a direct approach is

[^21]that there is still a need for a methodology to separate the child's share from the household total such as the situation for the child's housing expenses.

In all, economists do not agree on which methodology best measures actual child-rearing expenditures. Nonetheless, many economists and policymakers agree that any guidelines amount between the lowest and highest of credible measurements of child-rearing expenditures are appropriate guidelines amounts. Guidelines amounts below the lower bound are generally deemed to be inadequate for the support of children. Through a contract with the U.S. Department of Health and Human Services, Lewin/ICF (1990) developed this approach for assessing state guidelines. ${ }^{79}$ Since then, several states have used it and continue to use it. It was used by Georgia to assess its percentages for its last few reviews.

## Changes in Rothbarth Estimates over Time and Other Differences

Exhibit 23 shows the changes in the Betson-Rothbarth measurements over time for one, two, and three children. The red bar highlights the second Betson-Rothbarth estimates that form the basis of the current Georgia table. Exhibit 23 generally shows that average expenditures for one child have been stable over time, while the percentage of total expenditures devoted to child-rearing expenditures for two and three children has increased over time. This suggests a reduction in the "economies of scale" of having more children (e.g., the second child doesn't cost twice as much as the first child because they share bedrooms and clothes are handed down). Some of the differences may also be attributed to sampling error. This is of particular concern for the differences in the one-child estimates from the BR2 study (which forms the basis of the existing Georgia table) and the most current Betson-Rothbarth estimates. Exhibit 23 shows a decrease in the one-child percentages from 25.6 percent to 24.9 percent.

Exhibit 23: Comparison of Rothbarth Estimates over Time

[^22]With regard to the increase in the Rothbarth estimates for more children, Betson suggests that expenditures for two and three children should be examined in context of marginal expenditures-that is, starting with expenditures for the first child, how much more was spent for the second child? If the same amount is spent, the marginal increase in expenditures is 100 percent. If the amount is less than 100 percent, there are some economies of scale to having more children. The BR studies find that the marginal increase in expenditures from one to two children is about 40 to 55 percent, depending on the age of the study, and that the marginal increase in expenditures from two to three children is about 15 to 23 percent, depending on the age of the study. Generally, the older studies have smaller marginal increases, while the more recent studies have larger marginal increases. This suggests that the economies of scale of having more children is decreasing slightly.

## Rothbarth Estimates by Rodgers and Florida State University

As shown in Exhibit 22, Professor William Rodgers, Rutgers University, also produced Rothbarth estimates. The Rodgers-Rothbarth estimates are generally lower than the Betson-Rothbarth estimates. In fact, his estimates from 2000-2015 are the lowest shown in Exhibit 22. Rodgers prepared them to smooth out economic cycles including the Great Recession of 2007-2009. Still, many expenditure patterns may have been changed over a decade that could have affected the estimates including data improvements to the Consumer Expenditure (CE) survey that underlies the Rodgers estimates.

One key difference between the Betson and Rodgers estimates is the difference in their sample construction. Betson limits the sample to two-adult, married couples of child-rearing age and excludes households with adult children or other adults living in the household in order to focus on the cost of minor children. In contrast, Rodgers makes no restriction: a household could have one adult (e.g., a single parent), two adults (a couple) or three or more adults (e.g., a couple living with a grandparent). Betson and Rodgers also differ in their functional form of the Rothbarth estimate. Rodgers approach focuses on maximizing utility given a budget constraint of expenditures on either adult goods or children goods. ${ }^{80}$ Betson relies on the "Engel curve," ${ }^{81}$ which is another way that demand for a particular good is examined in economic theory of consumer demand. ${ }^{82}$ In other words, the Betson approach aims to measure compensating variance; that is, how much would the parents have to be compensated for adding children such that they are equally well off. Another key difference between the Betson and the Rodgers approach is that Betson uses a non-linear specification of expenditures, while Rodger did not. ${ }^{83}$ The non-linear specification allows for the change in child-rearing expenditures as total expenditures to

[^23]vary the rate that it increases when total expenditures increase. In fact, even when Rodgers attempted to replicated Betson's study by using the same sample construction as Betson, he did not use a nonlinear specification. This may explain why Rodgers replication of the Betson's work, as shown in Exhibit 22 , is consistently just below the Betson-Rothbarth estimates using the 2004-2009 CE.

The Florida researchers also use a different functional form for their Rothbarth estimates. The Florida researchers did not offer an explanation as to why their Rothbarth estimates decreased between their 2017 and 2021 studies. Their 2017 Rothbarth estimates are almost identical to the most recent BetsonRothbarth estimates. More detail about the differences in the Rothbarth approaches among the three researchers can be found in Betson's appendix to the Arizona report where his most recent Rothbarth estimates are published. ${ }^{84}$

## Changes in the Betson-Rothbarth (BR) Estimates by Income Range

Exhibit 24, Exhibit 25, and Exhibit 26 compare the BR measurements for one, two, and three children over time by net income range. There are several adjustments made to make the comparison. Due to these adjustments, the percentages shown in the exhibits are not comparable to those in Exhibit 23, which compares the BR measurements as a percentage of total expenditures. Total expenditures equal net income only if the household spends all its after-tax income and not more of it. If it spends more than its after-tax income, the household is borrowing or using credit. If it spends less than its after-tax income, it typically has savings.

## Development of the Comparisons

In developing Exhibit 24, Exhibit 25, and Exhibit 26, expenditures were converted to a net-income basis using the expenditures to after-tax income ratios from the same subset of families Betson considers when developing his measurements of child-rearing expenditures. For each study, Betson found that, on average, low-income families spend more than their after-tax income and high-income families spend less than their after-tax income (e.g., they have savings, make donations, and purchase gifts for others outside the home). When child-rearing expenditures as a percentage of total expenditures are converted to a percentage of after-tax income by adjusting them for average expenditure to income ratios, it produces the downward sloping trend line evident in the exhibits. If (and when) converted to gross income, the downward trend becomes steeper because federal income tax rates are progressive (i.e., tax rates become progressively higher with more income).

Due to reasons relating to economic theory and modeling, Betson must measure child-rearing expenditures as a percentage of a household's total expenditures rather than income. For purposes of analyzing how child-rearing expenditures vary with income, Betson develops measurements of childrearing expenditures and the ratio of expenditures to after-tax income for about 25 income ranges, with

[^24]the actual number varying by study year. (See Appendix B for the income ranges using the findings from the BR5 study.)

Exhibit 24: Comparisons of BR Measurements by After-Tax Income for One Child

Exhibit 25: Comparisons of BR Measurements by After-Tax Income for Two Children

Exhibit 26: Comparisons of BR Measurements by After-Tax Income for Three Children

Another issue of comparability is that each study considers a different price level. For example, Betson's most recent study is based on 2018 price levels, while his earlier studies consider price levels from earlier years. The last three Betson studies (BR3, BR4, and BR5) are converted to 2020 incomes and exclude the child's health insurance, child's extraordinary medical expenses, and childcare expenses. Georgia and most states exclude these items from their tables. (The exclusion of these expenses is discussed more in Appendix B.) A final adjustment is the capping of expenditures such that they do not exceed after-tax income. The assumption is that families should not be required to spend more of their income.

## Changes in Expenditures by Income Over Time

There are several points about the measurements over time that can be made from the exhibits comparing the BR measurements for the number of children over time. In general, there are some small changes, but the significance is questionable given the margin of error, the approximation of the income intervals to express them in 2020 price levels, and other factors. In general, most of the observed changes for all BR measurements over time can be explained by the conversion to after-tax income, improvements to the CE, or new CE data fields. To understand the changes, it is important to remember that the $B R$ measurements of child-rearing expenditures are measured as percentages of total expenditures. As described in Appendix B, they are first converted from total expenditures to after-tax income, then finally converted to gross income using federal and state income tax rates and FICA formulas. (The step of converting to gross income is discussed later in this section.)

As shown in the Exhibit 27, families may spend less, all, or more of their after-tax income. For the first step of translating the percentages of expenditures devoted to child rearing to percentages of after-tax income devoted to child rearing, the existing Georgia table relied on the average ratio of expenditures to income for each income range from the same subset of families Betson uses to measure child-rearing expenditures. At low incomes, families spend more than their income on average. Since most states do not want to require parents to spend more of their income, most states using the Betson estimates (including Georgia) cap expenditures at income. The cap in the existing Georgia table affects combined incomes below about $\$ 4,500$ gross per month. Using the most current Rothbarth estimates, the cap affects incomes below about $\$ 6,700$ gross per month.

Exhibit 27: Relationship between Expenditures and Income

At upper-middle to upper incomes, families also incur taxes and savings. This reduces the after-tax income available for child-rearing expenditures.

## Changes Beginning with the BR4 Measurements and Continued with the BR5 Measurements

The BR4 and BR5 measurements contain two improvements.

- Noticing that low-income families spend more than their after-tax income on average, the U.S. Bureau of Labor Statistics, which is the organization conducting the Consumer Expenditure Survey (CE), improved how it measures income. The improvements appeared to reclassify some lower households as having more income in the BR4 and BR5 samples than would have been classified previously as low income in earlier BR samples. Indirectly, this may explain some of the decreased amounts at low incomes from earlier studies to the BR4 and BR5 studies.
- The BR4 and BR5 studies use "outlays" instead of "expenditures" like the earlier BR studies did. Expenditures track closely with how gross domestic product (GDP) is measured. Namely, GDP considers houses to be investments (physical capital), so the BLS did not consider mortgage principal payments to be an expenditure item. (It did include and continues to include mortgage interest,

HOA fees, rent, utilities, and other housing expenses.) Outlays consider all monthly expenses (e.g., mortgage principal payments and interest, and payments on second mortgages and home equity loans). Outlays also include installment payments (e.g., for major appliances and automobiles). Expenditures include the total price of an item at the time of purchase (yet Betson did an adjustment for automobile purchases in the BR1, BR2, and BR3 studies). In short, outlays track closer to how families spend and budget on a monthly basis. These monthly budgets consider the total mortgage payment and installment payments. The impact of the switch from expenditures to outlays appears to be increased expenditures on children at higher incomes from the earlier studies to the BR4 and BR5 studies. This is likely because higher income families are more likely to purchase items via installments, have higher installment payments, and more mortgage principal that they are paying down.

## Changes Beginning with the BR5

The major change with the BR5 study was an improvement in how taxes were measured. In prior surveys, households would self-report taxes. The BLS learned that families underestimated taxes paid, particularly at high incomes; hence, their after-tax income (spendable income) was smaller than measured. Beginning in 2013, the BLS began using their internal tax calculator to calculate each household's taxes. This effectively reduced the after-tax income available for expenditures. Another indirect impact was to the average ratio of expenditures to after-tax income, which is used in the conversion of the measurement of child-rearing expenditures to a child support table, increased. (This can be illustrated through Exhibit 27, by assuming a drop in the after-tax income line for the cluster of families to the right that have higher incomes.) This increases the amounts from BR4 to BR5 for highincome families because they pay a larger amount of taxes. Their after-tax income is less; hence, the ratio of expenditures to after-tax income is larger.

In addition, a small improvement to the child's share of healthcare expenses was made for BR5. It better reflects the child's share of the family's total out-of-pocket expenses. This results in nominal increases at very low incomes and nominal decreases at very high incomes.

## State Adaption of BR5

To date, the 2021 Betson-Rothbarth (BR5) study is the only current study of child-rearing expenditures that is being used to update child support tables. It has been recently used to update the child support schedules of Alabama, Arizona, Iowa, Missouri, Pennsylvania, and South Dakota. All states that have recently updated their child support table have relied on the 2021 Betson-Rothbarth (BR) measurements as the basis of their update. The only exception is Massachusetts, where its task force considered the 2021 BR study, but also considered "a range of legal, policy and practical considerations" when
recommending changes to its chart ${ }^{85}$ that were eventually adapted. In short, the Massachusetts table does not strictly relate to economic data.

Changes in Engel Estimates over Time and Other Differences In the past decade, fewer studies were conducted using the Engel methodology than the Rothbarth methodology. One reason is that most states rely on one of the Rothbarth estimates, so there was only a need to update the Rothbarth estimates. (Typically, individual states contracted for Rothbarth estimates.) Only Betson and Florida State University researchers have developed Engel estimates in the past few decades. Betson has developed three sets of Engel estimates:

- The first set was part of his 1990 study of child-rearing expenditures;
- The second set resulted from two studies (one for the University of Wisconsin: Institute for Research on Poverty that was expanded for Michigan) and serves the basis of the current Georgia table; and
- The third set consists of the Engel estimates that appear in Appendix A of this report.

Michigan and Florida (which are the states that have commissioned Engel studies) and a few other states rely on Engel estimates from Espenshade's estimates from 1972-73 expenditure data that was published in 1984. The Florida researchers have prepared both Engel and Rothbarth estimates for the last three Florida child support guidelines reviews. All results produced by the Florida researchers are less than the Espenshade estimates regardless of data years and whether they applied the Engel or Rothbarth methodology. The Florida legislature has never updated the Florida table for any of these more current studies. Michigan also did not update its table for more current Engel estimates. Georgia is the only state to rely on Engel estimates other than the 1984 Espenshade-Engel estimates.

Exhibit 28 shows the Engel measurements over time for one, two, and three children. Georgia is based on the Engel estimates from 1996-99 data, which is the red-colored bar. Of particular interest is the drop in the Betson-Engel estimates from the 1996-99 Consumer Expenditure (CE) data to the Betson-Engel estimates from 2013-2019 CE data (e.g., a drop from $32 \%$ for one child to $21.9 \%$ ). Betson did not change his approach or any of his assumptions between the two studies. Only the data years were changed.

[^25]Exhibit 28: Comparison of Engel Estimates over Time and from Different Studies

Still, the most recent Betson-Engel estimates are close to the Florida estimates from different study years. As noted in Appendix A, there are nuanced differences between how Betson and the Florida researchers structure their estimating equations. Explaining the drop was a major concern to Betson. Did it result from an actual drop in child-rearing expenditures or was there something in the data or estimation methodology that was more sensitive to changes in the data over time? Appendix A provides a detailed answer. In summary, there are two major reasons. One was discovered by Betson's analysis of 35 years of CE data. As shown in Exhibit 29 (which is excerpted from Appendix A),

Exhibit 29: Comparison of Actual Engel Estimate over Time to the Predicted Amount over Time
 Betson found that the Engel estimate (which is shown by the red line with dots) has been decreasing over time; and, there was a major decrease beginning in 1988. That decrease coincides with the change in food at home question in the Consumer Expenditure (CE). Although a seemingly minor change from asking the question weekly rather than monthly, a noticeable spike in food consumption coincided with the change. A similar spike
occurred in 2008 when the food away from home question was changed from monthly to weekly. In all, the 2008 change narrowed the difference in food shares between families with and without children; in turn, reducing the Engel estimates. ${ }^{86}$

The second reason is realized by the downward trend of the estimated Engel over time that is also shown in Exhibit 29. (It is noted by the solid black trend line with no dots.) It shows that not only was there a decrease due to the 1988 change in how the CE captures food expenditures, but the Engel estimates also continue to decline over time. The Florida researchers also recognize that the Engel estimates have fallen since Espenshade produced his estimates from 1972-73 CE data, but do not offer an explanation for the decrease. ${ }^{87}$

Appendix A provides a much more thorough examination of the decline. The short explanation appears to relate to food consumption being more discretionary over time rather than a necessity. When food is purely a necessity, the amount needed to compensate a childless couple for the additional cost of children can be anchored by the percentage spent of necessary food. To retain that percentage, one could simply increase that childless couple's income by how much it costs to raise the children. (In Appendix A , this is explained using more precise economic terminology such as income effects and compensating variation.) However, when food consumption becomes more discretionary, there is substitution within the types of food purchased when there are children. These substitution effects are exacerbated by the substitution of food and other items (e.g., expenditures on adults goods and housing) particularly when some of those other items must also be consumed for the child (e.g., housing). (In contrast, expenditures on adult goods-which is the proxy of equally-well off families use by the Rothbarth methodology- does not contain the same issue because adults goods are consumed by just the two adults in the household regardless of the family size.) To be clear, this does not make earlier BetsonEngel estimates invalid. It is unknow whether the changes to the wording about food consumption improved the food consumption measurement. Even if it did, there is still the issue of food expenditures becoming more discretionary over time. Just to further illustrate changes in food expenditures over time, the exhibit to the right shows a chart prepared by the USDA on food

Exhibit 30: Changes in Food Expenditures over Time

[^26][^27]consumption over time. ${ }^{88}$ It shows a significant increase in consumption of food away from home with the exception of the beginning of the Covid-19 pandemic and the Great Recession of 2007-2009.

## Comparing the Engel and Rothbarth Estimates and Other Estimates

In 1990, when the federal government commissioned Lewin/ICF to assess the various economic estimates of child-rearing expenditures available for use by state child support guidelines, Lewn/ICF concluded that there were substantial and empirical difficulties involved in estimating expenditures on children; and, rather than using the point estimate from one particular study to assess a state's child support guidelines, that a bracketing approach involving the lowest and the highest of credible estimates could be used to assess state child support guidelines amounts. ${ }^{89}$ Lewin/ICF used the Engel and Rothbarth estimates for this type of bracketing. At the time, the Engel estimates were more than the Rothbarth estimates. Since the Rothbarth estimate was the lower bound, if a state's guidelines amounts were below the Rothbarth estimates, the state's guidelines may inadequately provide for children. If a state's guidelines amounts were above the Engel estimates, they may be too high. Since there have been few new Engel estimates over time, most states started using the USDA estimates (which are discussed in the next subsection) instead of the Engel estimates to bracket the high end. The USDA estimates were more current than the Engel estimates.

## Georgia's Use of the Average of the Rothbarth Estimate and Engel Estimate

Georgia arrived at using the average of the Engel estimates and Rothbarth estimates as a compromise when it switched to income shares. Mathematically, the average is consistent with the bracketing approach suggested by Lewin/ICF. At the time, Georgia relied on a percentage-of-obligor gross income guidelines model that provided for a range of percentages but did not direct whether to use the lower or higher percentage in the range for more or less income. At the time, both the Engel estimates and Rothbarth estimates suggested that the percentage should be lower at higher incomes because higher income families devote a smaller share of their expenditures/income to child-rearing expenditures. (To be clear, higher-income families devote a larger amount of dollars to child-rearing expenditures than low-income families, that is, only the percentage is lower.) Still, the Engel estimates were often higher than the Georgia percentages at the time; and, the Rothbarth estimates were often lower than the Georgia percentages at the time. In addition, economists at the time generally believed that the Engel estimate overstated actual child-rearing expenditures and the Rothbarth estimate understated actual child-rearing expenditures for theoretical reasons. That was also the empirical observation at the time.

[^28]
## Biases in Economic Methodologies

As noted in Lewin/ICF (1990) and by most economists, no methodology perfectly measures actual childrearing expenditures. Still, Betson has made a case for using the Rothbarth estimates for both theoretical and empirical reasons in most of his studies. The Florida researchers do not argue that either the Rothbarth or Engel methodology is unambiguously better than the other; rather they acknowledge that their results from the two different methodologies are very similar. ${ }^{90}$ This is very different than Betson, who finds a much wider gap between his Engel and Rothbarth estimates (see Exhibit 22).

Lewin/ICF recognizes that the validity of the Engel estimator is critically dependent on the assumption that the change in the percentage of the family's expenditures on non-food items should be the same as the percentage change on food expenditures when children are added to a childless couple. ${ }^{91}$ In addition, Lewin/ICF states that there is reason to believe this assumption is invalid because children are probably relatively "food intensive;" and if, children are food intensive, the Engel estimator overstates actual child-rearing expenditures. What Lewin/ICF missed in their assessment is the substitution effects between food and non-food items and within food items when a childless couple has children. The assumption and conclusion would be more valid if food was just a necessity.

No economist challenged this until empirical evidence showed that the Engel estimate is now less than its previous estimate using the exact same application of the Engel methodology; and, the Engel methodology now produces amounts less than the Rothbarth methodology. The problem appears to be the substitution effects surrounding food. Although there are also issues with the model specification to adjust food shares by family size and whether that adjustment shall be non-linear. (This is discussed more in Appendix A and also explains some of the differences between the Betson and Florida State approach to applying the Engel methodology.)

Lewin/ICF also suggests that the Rothbarth estimator is likely to understate actual expenditures on children because it does not account for the possibility that the presence of children in a household may lead to substitution from consumption goods that must be shared by children toward goods consumed only (or mostly) by adults. If such a substitution occurs, "relatively low levels of additional income are needed to restore the level of adult expenditures to that which would have prevailed in the absence of children." ${ }^{92}$

With regard to the USDA approach, Lewin/ICF suggested the USDA methodology overstated actual childrearing expenditures because it used a per capita approach to determine the child's housing expense. The per capita approach suggests that the child's housing expense is the same as an adult's housing expense, when the economic convention is that a child's housing expense should be less than an adult's expense. Since Lewin/ICF's assessment in 1990, the USDA has changed its methodology for measuring the child's housing expenses that considers the marginal cost of an extra bedroom for a child. Betson

[^29]assessed the approach and concluded that any USDA-like approach is very sensitive to how the child's housing expenses are determined. This is a major issue for any methodology that attempts to measure child-rearing expenditures directly. This is because housing expenses are consumed both by the children and the adults in a household and the child's share is not clear. ${ }^{93}$ An indirect method must be used to determine the child's share of housing.

The USDA Study and Other Methodologies
The USDA first measures expenditures for seven different categories (i.e., housing, food, transportation, clothing, healthcare, childcare and education, and miscellaneous) and then sums them to arrive at a total measurement of child-rearing expenditures. Some of the methodologies use a pro rata approach, which is believed to overstate child-rearing expenditures. The USDA reports its estimates on an annual basis for one child in a two-child household. The USDA provides measurements for the United States as a whole and as four regions: the South, Midwest, Mid-Atlantic, and West. The USDA also produces measurements for rural areas and single-parent families. These measurements are for the nation as a whole and not provided individually by region.

The USDA amounts also vary by age of the child and household income. The most recent USDA measurements are from expenditures data collected in 2011 through 2015. They are shown in Exhibit 32. This is the amount for one child in two-child households. If there is only one child in the household, the USDA found the amounts, as shown in the exhibit, should be increased by 27 percent. If there are three or more children in the household, the amounts should be adjusted by the number of children multiplied by 76 percent. (These adjustments for less and more children were incorporated into the existing table.) The amounts include expenditures for the child's healthcare and childcare expenses.

Exhibit 31: Summary of Findings from 2017 USDA Study

|  |  | Married-Couple Families |  | Single-Parent Families (overall US) |
| :---: | :---: | :---: | :---: | :---: |
|  |  | Urban (overall U.S.) | Rural Areas (overall U.S.) |  |
| Low Income (less than $\$ 59,200$ gross per year) | Child-rearing \$ | \$9,330-\$9,980/year | \$7,650-\$8,630/year | $\begin{gathered} \$ 8,800- \\ \$ 10,540 / \text { year } \end{gathered}$ |
|  | Average Gross Income | \$36,300 | \$36,100 | \$24,400 |
| Middle Income (more than \$59,200 per year and less | Child-rearing \$ | $\begin{gathered} \text { \$12,350- } \\ \$ 13,900 / \text { year } \end{gathered}$ | \$10,090-\$11,590/year | $\begin{gathered} \$ 16,370- \\ \$ 20,190 / \text { year } \end{gathered}$ |
| than $\$ 107,400$ for Urban and Rural Only) | Average Gross Income | \$81,700 | \$79,500 | \$99,000 |
| High Income (more than $\$ 107,400$ for Urban and Rural only) | Child-rearing \$ | $\begin{gathered} \$ 19,380- \\ \$ 23,380 / \text { year } \end{gathered}$ | \$14,600-\$17,000/year |  |
|  | Average Gross Income | \$185,400 | \$156,800 |  |

One salient finding (as shown in the above exhibit) that is pertinent to addressing concerns about using expenditures data from intact families as the basis of state child support guidelines is that single-parent

[^30]families with low income and married-couple families with low income devote about the same amount to child-rearing expenditures. It should also be noted that the amounts for middle incomes and high incomes for single-parent families are not separated because there are too few high income, singleparent families from which to produce measurements. More single-parent families with children live in poverty than married-couple families with children.

An approach similar to the USDA approach was attempted for California's 2021 review. ${ }^{94}$ The study found that the USDA methodology was not sufficiently documented to replicate it, particularly the methodologies and data sources to arrive at the cost of the child's housing expenses and medical expenses. Further, the study found that the results were highly sensitive to the assumptions about housing costs.

Another frequently cited study among state guidelines was conducted by Professor William Comanor, University of California at Santa Barbara. ${ }^{95}$ The Comanor study was discussed in Georgia's last review. Estimated from 2004-2009 expenditure data, it does not form the basis of any state guidelines. It produces near-poverty levels.

## The Consumer Expenditure (CE) Survey

All of the studies shown in Exhibit 22 (except van der Gaag because it's a literature review) rely on expenditure data collected from households participating in the Consumer Expenditure Survey (CE). ${ }^{96}$ Conducted by the U.S. Bureau of Labor Statistics (BLS), the CE is the most comprehensive and detailed survey of household expenditures. The CE surveys households on hundreds of items. The CE surveys about 5,500 households per quarter on expenditures, income, and household characteristics (e.g., family size). Households remain in the survey for four consecutive quarters, with households rotating in and out each quarter. ${ }^{97}$ Households are selected to represent the entire U.S. civilian noninstitutional population. Until recently, the CE surveys are designed to be nationally representative surveys with sufficient sampling to detect regional differences but not state differences. In 2017, the BLS began statewide sampling for five large states (California, Illinois, Florida, New York, and Texas). Most of these economists also used three or four quarters of expenditures data for a surveyed family.

Like most surveys, the BLS has made several improvements to the data it captures over time. Some of these improvements may contribute to differences in study results over time. In 2004, BLS improved its income measurement to address a perceived anomaly occurring at low incomes where average expenditures exceeded average income. This improvement may have affected measurements of

[^31]expenditures at low incomes for studies relying on data beginning in 2004. In 2010 and after, all economists used "outlays," while older studies used "expenditures." The BLS added outlays to its dataset at about this time. Both outlays and expenditures measure the cost of economic goods and services, including the sales tax on these items. They differ in their treatment of purchases of homes, vehicles, and other items procured through installment payments. Expenditures track more closely to how gross domestic product is measured by considering home purchases to be an investment in physical capital, so expenditures consider only the payment of mortgage interest, while outlays consider payments of both mortgage interest and principal, even if it is a second mortgage or home equity loan. (To be clear, the CE also captures rents for non-homeowners and other housing expenses such as utilities and HOA fees.) Expenditures captures the full purchase price of any vehicle purchased during the survey period, whereas outlays consider only the monthly installment payments for vehicles that are financed during the survey period. In 2013, the BLS improved how it measured taxes. This is important to using the data to form child support guidelines because most households base expenditure decisions on their after-tax income, which is the amount available for expenditures, rather than their gross income. In turn, this also affects expenditures to after-tax income ratios that are often used to convert measurements of child-rearing expenditures to child support tables and formulas.

## The COVID-19 Pandemic and the CE Survey

The most current studies of child-rearing expenditures consider expenditure data from 2013-2019, which is before the COVID-19 pandemic began in 2020. The pandemic impacts the economy and expenditures in many ways. The ideal would be to have more current measurements of child-rearing expenditures, but there are several problems with that. One is that the economy and consumption are still changing. Another concerns the underlying data source, the Consumer Expenditure (CE) survey. The CE response rate in 2020, the year the pandemic began, declined. ${ }^{98}$ The impact of this decline on survey results is still being assessed.

Using basic economic theory, most factors known to affect supply and demand level have changed since the pandemic began, which, in turn, affect prices and the amount consumed. At the micro-economic level (which considers individual goods and services), these factors include changes in all the factors identified in classical economic theory that affect how much a household demands (or consumes) and how much firms supply. This includes price levels, income (including changes caused by government stimulus payments and the temporary increase in the child tax credit), ${ }^{99}$ prices of related goods and services, and taste and preferences (e.g., increased demand for at-home entertainment at the beginning of the pandemic); consumers' expectations about the future; the number of buyers; changes in input prices (e.g., availability of semi-conductor chips) and technology (e.g., technology that affects ability to work remotely); suppliers' expectations about the future prices; and the number of sellers.

[^32]Another concern about using 2013-2019 CE data is inflation. From March 2020 through May 2022, prices increased by 14 percent. ${ }^{100}$ In the last year, prices have increased 8.6 percent alone. Price changes have not been uniform across all goods and services. For example, although the all-items price index increased 8.6 percent in the last year, the food price index increased 10.1 percent and the energy price index rose 34.6 percent over the same time period. ${ }^{101}$ Lower income families devote a higher percentage of their budget share to necessities (such as food) than higher-income families who can afford more luxury items. When prices increase, higher-income families can cut back on luxury items to offset the increased cost of necessities. In all, the impact on child-rearing expenditures is unknown. It is anticipated the changes will not be uniform across all incomes and family sizes.

Other Factors and Assumptions underlying a Child Support Table

Besides the economic study of child-rearing expenditures, several other factors that must be updated to compare current measurements of child-rearing expenditures to the existing Georgia table. Exhibit 32 lists the data and major underlying assumptions of the existing table; and, how they are updated for comparison purposes. This is also an opportunity for the Commission to review these assumptions.

## Factor 1: Guidelines Model

The guidelines model, which is a policy decision, is important to directing what economic data on the cost of raising children to use. The most common principle used for state guidelines models is what University of Wisconsin researchers call the "continuity of expenditures model"-that is, the child support award should allow the children to benefit from the same level of expenditures had the children and both parents lived together. ${ }^{102}$ In the income shares guidelines model-which is used by 41 states, including Georgia-the obligated parent's prorated share of that amount forms the basis of the guidelines-determined amount. Most states that use the percentage-of-obligor income guidelines model use the same economic studies but presume that the custodial parent contributes an equal dollar amount or percentage of income to child-rearing expenditures.

Delaware, Hawaii, and Montana use the Melson formula, which is a hybrid of the income shares approach and the percentage-of-obligor income guidelines. The Melson formula prorates a basic level of support to meet the primary needs of the child; then, if the obligated parent has any income remaining after meeting their share of the child's primary support, their own basic needs, and payroll taxes, an additional percentage of their income is added to his or her share of the child's primary support.

Research finds that other factors (e.g., economic basis, whether the table has been updated for changes in price levels, and adjustments for low-income parents) affect state differences in guidelines more than the guidelines model. All states that have switched guidelines models in the last two decades have

[^33]switched to the income shares model (i.e., Arkansas, District of Columbia, Georgia, Illinois, Massachusetts, Minnesota, and Tennessee). Common reasons for switching to the income shares model are its perception of equity because it considers each parent's income in the calculation of support and its flexibility. Besides the guidelines models in use, there are several other guidelines models not in use that have been proposed in several states. Each have failed for various reasons.

## Parenting-Time Expenses

The income shares model makes no assumption about parenting-time expenses. The table amounts reflect how much is spent to raise the child in one household. Most states with adjustments for shared physical custody assume that it costs more to raise a child in two households than one household. Most income shares guidelines layer an adjustment formula for shared physical custody on top of the calculation of support for sole custody based on the guidelines table.

## Factor 2: Determine which Economic Study to Use

Newer studies have the strength of reflecting more current studies. Ultimately, which study is used is a policy decision.

## Factor 3: Adjust to Current Price Levels

The existing table is based on price levels from September 2005. The most current price level data available when this report was written was from July 2022. Prices have increased by 49.0 percent between the two time periods. This does not mean a 49.0 percent increase in the table amounts because some or all of the increase is offset by incomes that have also increased over time.

## Factor 4: Exclude Childcare Expenses and Out-of-Pocket Healthcare Costs

The measurements of child-rearing expenditures cover all child-rearing expenditures, including childcare expenses and the out-of-pocket healthcare expenses for the child. This includes out-of-pocket insurance premium on behalf of the child and out-of-pocket extraordinary, unreimbursed medical expenses such as deductibles. These expenses are widely variable among cases (e.g., childcare expenses for an infant are high, and there is no need for childcare for a teenager). Instead of putting them in the table, the actual amounts of the expenses are or can be addressed on a case-by-case basis within the guidelines. To avoid double-accounting in the table, these expenses are subtracted from the measurements when developing the existing and updated tables. Appendix B provides the technical details on how this is done.

Exhibit 32: Summary of Economic Data and Assumptions underlying Georgia's Current Child Support Table and Assumptions Used in Comparisons

| Factor | Basis of Existing Table | Assumptions Used to Compare More Current Economic Studies on Child-Rearing Expenditures | Other Alternatives/Notes |
| :---: | :---: | :---: | :---: |
| 1. Guidelines model | Income shares model | Income shares model | - 41 states use the income shares model <br> - Other states use Melson formula and percentage of obligor income |
| 2. Economic study and underlying Consumer Expenditure (CE) Survey years | Average of the Betson-Rothbarth and Betson-Engel applied to 1996-99 CE data | - Average of Betson-Rothbarth and Betson-Engel from 2013-2019 CE <br> - Most current Betson-Rothbarth study (2021) from 2013-2019 CE | - 32 states use Rothbarth <br> - 6 states use BR (2021) <br> - Other studies |
| 3. Price levels | Sept. 2005 | July 2022 | - Prices have increased $49 \%$ between the two time periods <br> - Some states have capped the percentage increase/decrease from the existing amount due to recent inflation |
| 4. Exclude childcare, child's health insurance premium, and extraordinary out-of-pocket medical expenses | Excludes all but the first $\$ 250$ per child per year in ordinary, out-of-pocket medical expenses | No change | - Retain assumption <br> - Exclude all healthcare expenses <br> - Ohio approach |
| 5. Convert expenditures to gross income <br> Step 1: Convert to net income Step 2: Consider federal and state income taxes and FICA | - Converts expenditures to net income using data from same families in the CE that Betson uses <br> - Caps expenditures at $100 \%$ <br> - 2005 federal and state income tax withholding formulas for a single taxpayer | - No change in methodology, just more recent CE data used and 2022 tax rates for single taxpayer | - Assume all after-tax income is spent <br> - Alternative tax assumptions, including taxes of a married couple with children |
| 6. Highest combined income considered in economic data | \$30,000/mo | \$40,000/mo | - Formula can be developed for higher incomes |
| 7. Provide for consideration of the parent's basic subsistence needs | None | None | - Incorporate a low-income adjustment in the table <br> - Incorporate a low-income adjustment into the worksheet |

## Inclusion of \$250 per Child per Year for Out-of-Pocket Medical Expenses

There is an exception to excluding the child's healthcare expenses from the table. An amount to cover ordinary out-of-pocket healthcare expenses (e.g., aspirin and copays for well visits) was retained in both the existing and updated tables. The current table assumes up to $\$ 250$ per child per year for ordinary out-of-pocket healthcare expenses. That assumption is retained for the proposed, updated table because the average is still near $\$ 250$ per child per year. The concern, however, is the amount varies significantly among those with Medicaid and those with private insurance, particularly with high deductibles. The 2015 Medical Expenditure Panel Survey (MEPS) finds that the average out-of-pocket medical expense per child was $\$ 248$ per year but varied depending on whether the child was enrolled in public insurance such as Medicaid or had private insurance. Based on MEPS data, out-of-pocket medical expenses averaged $\$ 63$ per child per year for children who had public insurance and $\$ 388$ per child per year for those with private insurance. ${ }^{103}$ The 2017 MEPS data, which is the most current available, has not drilled down to the public insurance and private insurance level, but they do report an average for all children, $\$ 271$ per child, which is close to the $\$ 250$ level.

Some states are responding to the disparity in out-of-pocket expenses between those with public insurance and those with private insurance in two ways. One way is to include no ordinary out-of-pocket medical expenses (e.g., Connecticut and Virginia) in their tables. This would reduce the table amounts. This means parents must share receipts for all out-of-pocket medical expenses, not just those exceeding $\$ 250$ per child per year. The major pro of this approach is that it is more accurate. The major cons are that it requires more information sharing and coordination between the parties and that the burden falls on the parent incurring the expense. The parent incurring the expense must save receipts, notify the other parent, and initiate an enforcement action if the other party fails to pay his or her share. In addition to including no ordinary out-of-pocket medical expenses in the tables, Michigan and Ohio take the method one step further. Not only do they exclude all healthcare expenses from the table, but they provide a standardized amount of out-of-pocket medical expenses that is added in the worksheet as a line item similar to the add-on for childcare expenses. That amount can vary depending on whether the insurance is private insurance or Medicaid enrollment.

## Factor 5: Conversion to Gross Income

The need for this conversion is illustrated in Exhibit 27 that shows some families spend more or less than their income. As stated earlier, Betson reports the measurements of child-rearing expenditures as a percentage of total expenditures. Thus, they must be converted from a percentage of total expenditures to a gross-income basis because the child support table relates to gross income. This is a two-step process. The first step is converting expenditures to net income.

## Step 1: Conversion to Net Income

The conversion was done by taking the expenditures-to-income ratio for the same subset of CE families used to develop the measurements of child-rearing expenditures for both the existing and proposed

[^34]child support tables. The ratios from the most recent BR5 study are shown in Appendix B, as well as an example of how the conversion is made. An exception is made at lower incomes, because as shown in Exhibit 27, they spend more than their after-tax income on average. In the existing Georgia table, this affects combined incomes below about $\$ 4,500$ gross per month. Using the most current Rothbarth estimates, the cap affects incomes below about $\$ 6,700$ gross per month.

This conversion method is common among most income shares guidelines. The only notable exception is that the District of Columbia assumes that all after-tax income is spent, and hence, makes no adjustment. (This results in larger table amounts that become progressively larger as income increases.)

## Step 2: Conversion to Gross Income

After the measurements of child-rearing expenditures are converted to after-tax income as described above, then they are converted to gross income. For both the existing and updated tables, the conversion to gross income relies on the federal withholding formula ${ }^{104}$ and state income tax rates. ${ }^{105}$ (Appendix B has more detail on the conversion.) The federal withholding formula also considers FICA. The Social Security and Medicare tax is 6.2 percent for incomes up to $\$ 147,000$ per year. Above that level, the Medicare tax of 1.45 percent applies. In addition, the 0.9 percent additional Medicare tax for incomes above $\$ 200,000$ per year is also considered.

The federal income withholding formula provides for different formulas depending on which year of the IRS W-4 form the employer uses to calculate income tax withholding. The alternative formulas produce the same amounts at lower and middle incomes, but there are slight differences at very high incomes. The IRS developed alternative methods to accommodate sweeping tax reform that became effective January 1, 2018, due to the Tax Cuts and Jobs Act of 2017 (Pub. L. 115-97), which increased the standard deduction and repealed personal exemptions. Earlier IRS W-4 forms still accommodate personal exemptions. The 2020 and later $\mathrm{W}-4$ forms do not. It is assumed that the $2020 \mathrm{~W}-4$ (or later) form is used and the manual percentage method formula for a single taxpayer is used. For state income taxes, the 2022 employer withholding formula is used assuming a single taxpayer.

Using federal and state income tax withholding formulas and assuming all income is taxed at the rate of a single tax filer with earned income is a common assumption among most states and the assumption underlying the existing Georgia table. Most alternative federal tax assumptions would result in more after-tax income; hence, higher table amounts. For example, the District of Columbia assumes the taxfiling status is for a married couple claiming the number of children for whom support is being determined. The District used this assumption prior to 2018 tax reform that eliminated the federal tax allowance for children and expanded the federal child tax credit from \$1,000 per child to \$2,000 per child and higher for tax year 2021. The 2018 federal tax changes are tabled to expire in 2025.

Since the income conversion assumes single tax filing status, there is no adjustment for the child tax credit or the Earned Income Tax Credit (EITC). The child tax credit would be impossible to include in the

[^35]table since it applies to one parent and that parent's income must be within a certain range to receive the full child tax credit and another range to receive a partial child tax credit (which the IRS calls the additional child tax credit). In contrast, the table considers the combined gross income of the parents. Say the combined income of the parents is $\$ 150,000$ per year. If the parents have equal incomes (\$75,000 per year), either parent's income would make them income-eligible for the full child tax credit. Say, however, that the obligated parent's income is $\$ 150,000$ and the other has no income, the parent without income would not be income-eligible for the child tax credit. The EITC is not considered because it is a means-tested program. Most states do not consider mean-tested income to be income available for child support.

The pro of considering an alternative tax assumption such as assuming the tax-filing status is married better aligns with the economic measurements of child-rearing expenditures because the measurements consider households in which the parents and children live together, so they would probably file as a married couple. They also could be set up to include the federal child tax credit, the additional child tax credit, the earned income tax credit, or a combination of these child-related tax credits. The cons are that this would be a change in the previous assumption that is not necessarily justifiable and may not be consistent with current practices.

## Factor 6: Very High Incomes

The new measurements of child-rearing expenditures consider combined net incomes up to about $\$ 25,000$ per month. This is equivalent to about $\$ 40,000$ gross per month. There are few families with incomes above this threshold. The earlier estimates of child-rearing expenditures that form the basis of the existing guidelines could only cover up to $\$ 30,000$ gross per month. This is because there were even fewer families with high income then.

The Georgia guidelines provides a deviation criterion for incomes in excess of $\$ 30,000$ gross per month.

> High income. For purposes of this subparagraph, parents are considered to be high-income parents if their combined adjusted income exceeds $\$ 30,000.00$ per month. For high-income parents, the court shall set the basic child support obligation at the highest amount allowed by the child support obligation table but the court or the jury may consider upward deviation to attain an appropriate award of child support for high-income parents which is consistent with the best interest of the child.

Many other income shares states also address income above the highest income considered by the table. A key but subtle difference is that they usually provide the highest amount of the table is a floor: that is, the amount cannot be lower than that, but do not consider a higher amount to be a deviation.

One possible concern is the large increases at high incomes if Georgia were to update its table for more current economic data. In 2020, lowa was reviewing its guidelines, and an update would also produce large increases at high incomes. lowa decided to cap the updated table amounts such that they would never exceed 9.5 percent of the existing table. lowa made the decision before the economy was hit by escalating inflation. Alabama, Missouri, and South Dakota also considered capping how much the table could increase. Some of these states discussed using their modification threshold- that is the minimum difference between the existing and proposed order amount before a modification will be issued, as a
cap. In Georgia, the modification threshold requires both a 15 -percent and $\$ 25$ minimum change ${ }^{106} \mathrm{~A}$ 15 -percent increase occurs at about combined gross incomes of about $\$ 18,500$ month but varies with the number of children. This is also about the highest income for which the USDA produces estimates. The USDA estimates generally suggest a higher increase than other measurements.

After extensive deliberation, all states that were recently considering a cap on the percentage increase decided not to cap how much the table would increase. The overwhelming rationalization was that the table should reflect actual child-rearing expenditures. Some of the state deliberations also considered that higher income households are typically attorney represented so any appropriate adjustment could be brough forth by an attorney, and escalating inflation.

## Factor 7: Incorporate a Low-Income Adjustment and Minimum Order

 Georgia considers the basic subsistence needs of low-income obligated parents through its deviation criteria. Georgia is one of three states that does not have a presumptive, low-income adjustment. Since 2016 federal regulation ( 45 C.F.R. § 302.56 (1)(c)(ii) as shown below, requires states to consider the subsistence needs of a low-income obligated parent through a low-income adjustment such as a selfsupport reserve (SSR).(ii) Takes into consideration the basic subsistence needs of the noncustodial parent (and at the State's discretion, the custodial parent and children) who has a limited ability to pay by incorporating a low-income adjustment, such as a self- support reserve or some other method determined by the State; and...

The federal requirement does not spell out that the consideration of the parent's subsistence needs must be addressed as a rebuttal presumption in the guidelines. In 2016, there were 37 state guidelines that provided a self-support reserve. ${ }^{107}$ The count would be higher today since some states recently adapted a SSR (e.g., Arkansas and Wyoming) to conform to the 2016-added requirement. Exhibit 33 shows how Alabama's SSR works. Alabama sets its SSR at $\$ 981$, which was the 2021 federal poverty guidelines level for one person adjusted for Alabama's below average income. Most states set their SSR at a higher amount.

Another option is to incorporate the SSR into the child support table. Exhibit 34 shows how North Carolina does this. Note that the first line of the North Carolina table is $\$ 50$ per month. This is obviously below the cost of raising children. The area of the North Carolina schedule that is downward adjusted due to the SSR is shaded.

## SSR Amount

Most states relate the SSR to the federal poverty guidelines (FPG). The 2022 federal poverty guidelines (FPG) for one person is $\$ 1,133$ per month. States with low-income or lower prices typically adjust the FPG for their lower income or price parity. The states with the highest SSRs are New Jersey and Arizona. New Jersey's SSR is 150 percent of the FPG and applies to net income. (The New Jersey child support guidelines table relates to net income). Arizona's SSR is 80 percent of full-time earnings at the

[^36]state minimum wage. Since the 2022 state minimum wage is $\$ 12.80$ per hour, the 2022 Arizona SSR is $\$ 1,775$ per month. The Arizona SSR relates to gross income. A state with a low SSR is West Virginia: its SSR is $\$ 500$ per month and relates to gross income. Other states with very low SSRs are Florida, Louisiana, and South Dakota. One advantage to relating the SSR to net income is it is after-tax income that the obligated parent has available for child support. One advantage to relating it to gross income is it doesn't require information about taxes or the calculation of taxes.

Exhibit 33: Alabama's SSR Adjustment ${ }^{108}$

|  | Plaintiff | Defendant | Combined |
| :---: | :---: | :---: | :---: |
| Line 1: Monthly gross income | \$1,200 | \$1,000 | \$2,200 |
| Line 2: Monthly adjusted gross income | \$1,200 | \$1,000 | \$2,200 |
| Line 3: Percentage share of income (each parent's income on Line 2 divided by Combined Income) | 55\% | 45\% | 100\% |
| Line 4: Basic child support obligation |  |  | \$414 |
| Line 5: Preliminary child support obligation (Multiple Line 3 by Line 4) | \$228 | \$186 |  |
| Self-Support Reserve Test |  |  |  |
| Line 6: Income available after Self-support reserve (Line 2 minus $\$ 981$, if less than \$0, enter \$0) | \$219 |  |  |
| Line 7: Income available for support (85\% of Line 6, if less than \$50, enter \$50 minimum order | \$ 186 |  |  |
| Line 8: Recommended child support order (Lessor Lines 5 and 7) | \$186 |  |  |

Exhibit 34: North Carolina's Self-Support Reserve Is Incorporated into the Table

## Self-Support Reserve: Supporting Parents with Low Incomes

The guidelines include a self-support reserve that ensures that obligors have sufficient income to maintain a minimum standard of living based on the 2018 federal poverty level for one person ( $\$ 1,012.00$ per month) for obligors with an adjustment gross income of less than $\$ 1,108$ the Guidelines require, absent a deviation, the establishment of a minimum support order (\$50). For obligors with adjusted gross incomes above \$1,097, the Schedule of Basic Support Obligations incorporates a further adjustment to maintain the self-support reserve for the obligor.

If the obligor's adjusted gross income falls within the shaded area of the Schedule and Worksheet A is used, the basic child support obligation and the obligor's total child support obligation are computed using only the obligor's income. In these cases, childcare and health insurance premiums should not be used to calculate the child support obligation. However, payment of these costs or other extraordinary expenses by either parent may be a basis for deviation. This approach prevents disproportionate increases in the child support obligation with moderate increases in income and

| $\begin{aligned} & \text { Combined } \\ & \text { Adjusted } \\ & \text { Gross } \\ & \text { Income } \\ & \hline \end{aligned}$ | $\begin{aligned} & \text { One } \\ & \text { Child } \end{aligned}$ | $\begin{array}{c\|} \text { Two } \\ \text { Children } \end{array}$ | ${ }_{\text {children }}^{\text {Three }}$ | Four Children | Five Children | ${ }_{\text {children }}^{\text {Six }}$ |

| 2750 | 500 | 771 | 943 | 1054 | 1159 | 1182 |
| 2800 | 508 | 785 | 959 | 1071 | 1178 | 1217 |
| 2850 | 517 | 798 | 975 | 1089 | 1198 | 1253 |
| 2900 | 525 | 811 | 991 | 1107 | 1218 | 1288 |
| 2950 | 534 | 824 | 1007 | 1125 | 1237 | 1374 |
| 3000 | 542 | 837 | 1023 | 1142 | 1257 | 1359 |
| 3050 | 551 | 850 | 1039 | 1160 | 1276 | 1387 |
| 3100 | 560 | 863 | 1055 | 1178 | 1296 | 1409 | protects the integrity of the self-support reserve. In all other cases, the basic child support obligation is computed using the combined adjusted gross incomes of both parents.

[^37]Minimum Order
If the difference between the obligated parent's adjusted gross income and the SSR is less than $\$ 50$, many states provide for a minimum order of $\$ 50$ per month. Some states provide for other amounts. More states are providing for zero orders for certain circumstances such as incarceration or a disability that impedes employment.

## Section 4: Comparisons to the Georgia Child Support Table

Exhibit 35, Exhibit 36, and Exhibit 37 provide graphical comparisons of the existing table amounts to the average of the most current Betson-Rothbarth measurements and the Betson-Engel measurements for one, two and three children, respectively. Pure Betson-Rothbarth amounts, and USDA amounts are also shown in the comparisons. All the estimates are updated to 2022 price levels. The Betson estimates also consider 2022 federal and state income tax rates and FICA. There is no need to adjust the USDA estimates because they relate to gross income. The USDA estimates stop at about $\$ 20,000$ gross per month because there is insufficient information at very high incomes. To be clear, the exhibits not only consider current economic estimates of child-rearing expenditures but update to other data such as changes in price levels and federal and state income tax rates.

In general, the existing table is between the USDA and the average at low combined incomes (i.e., about $\$ 5,000$ gross per month) for one, two, and three children. For middle and higher incomes, the existing table is below all estimates of child-rearing expenditures for two and three children. (The pattern for four or more children would be similar to that of three children.) Taken alone, this suggests that the existing Georgia table provides an inadequate level of support for two or more children at these incomes. This is largely driven by changes in price levels that overshadow the impact of updated estimates of child-rearing expenditures. Further, increases are indirectly caused by federal tax reform that became effective in 2018 that provided most households with more spendable income.

As discussed in more detail, the differences in the one-child are more complicated and nuanced. More detailed side-by-side comparisons are provided in Appendix C.

Exhibit 35: Comparison of Existing Table to Economic Estimates of Child-Rearing Expenditures

Exhibit 36: Comparison of Existing Table to Economic Estimates of Child-Rearing Expenditures

Exhibit 37: Comparison of Existing Table to Economic Estimates of Child-Rearing Expenditures

Exhibit 38 shows the average, median, minimum and maximum difference by economic study for one and two children. The patterns for three or more children are similar to those for two children. They are shown in Appendix C. For one child, the average increase is $\$ 106$ per month using the pure Rothbarth, and a $\$ 10$ decrease using the average of Rothbarth and Engel estimators. This occurs due to the decrease in the Engel estimator for one child, which as discussed in the previous section. The decrease is not as large for two and more children. The Rothbarth estimator also increased for two and three children. There is also a very minute decrease for one child under the pure Rothbarth estimate. That decrease is never more than $\$ 59$ and occurs for combined incomes below $\$ 5,450$ gross per month. These are the incomes that are affected by the cap at low incomes (which is explained under Factor 5 of the previous section) so parents are not required to spend more than their income, on average. For two children under the average of the Rothbarth and Engel estimates, the average change is $\$ 147$ per month. There are also some decreases, but that decrease is never more than $\$ 59$ per month and occurs for combined incomes below $\$ 5,150$ gross per month.

Exhibit 38: Average and Median Difference from Existing Table Amount by Economic Study

|  | \$ Difference |  |  | \% Difference |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Updated <br> Rothbarth | Updated USDA | Updated Average of Rothbarth and Engel | Updated <br> Rothbarth | Updated USDA | Updated <br> Average of Rothbarth and Engel |
| One Child |  |  |  |  |  |  |
| Average Change | \$106 | \$188 | -\$10 | 4.5\% | 18.3\% | -2.6\% |
| Median Change | \$57 | \$163 | -\$41 | 3.8\% | 14.7\% | -3.5\% |
| Minimum Change | -\$59 | \$33 | -\$88 | -13.8\% | 8.1\% | -18.0\% |
| Maximum Change | \$395 | \$351 | \$195 | 17.7\% | 45.8\% | 8.7\% |
| Two Children |  |  |  |  |  |  |
| Average Change | \$300 | \$524 | \$147 | 11.6\% | 33.2\% | 4.9\% |
| Median Change | \$211 | \$547 | \$74 | 10.1\% | 29.4\% | 4.0\% |
| Minimum Change | -\$30 | \$ 77 | -\$59 | -8.5\% | 22.4\% | -12.2\% |
| Maximum Change | \$825 | \$674 | \$558 | 26.9\% | 62.0\% | 18.2\% |

The average differences between the updated USDA and existing table amount are $\$ 188$ for one child and $\$ 524$ for two children. The USDA amounts only consider combined incomes up to $\$ 20,000$ gross per month (in 2022 dollars). There is insufficient information from the USDA to extend the amounts higher.

The existing Georgia child support table is less than all three measurements for:

- One child at combined incomes above $\$ 19,950$ gross per month;
- Two children at combined incomes above $\$ 5,100$ gross per month;
- Three children at combined incomes above $\$ 3,500$ gross per month; and
- Four and more children at combined incomes above $\$ 2,250$ gross per month.

Taken alone, this would suggest that the child support table may be inadequate at these levels.
Although there were some places that a particular estimate was less than the existing Georgia child support table, it does not suggest decreases. This is because all three estimates were never less. The updated average of the Engel and the Rothbarth estimates was less than the existing Georgia table amounts for:

- One child at combined incomes below $\$ 19,900$ gross per month;
- Two children at combined incomes below $\$ 5,100$ gross per month;
- Three children at combined incomes below $\$ 3,500$ gross per month; and
- Four and more children at combined incomes below $\$ 2,250$ gross per month.

The income thresholds for three and more children are generally low-income assuming both parents have minimum-wage income or slightly more.

The updated Rothbarth estimate was less than the existing Georgia table amounts for:

- One child at combined incomes below $\$ 5,450$ gross per month;
- Two children at combined incomes below \$5,100 gross per month; and
- Three or more children at combined incomes below $\$ 2,250$ gross per month.

The difference was never more than $\$ 29$ per month for three or more children. Some states (e.g., South Dakota) where the economic data indicates decreases have elected to retain the current amounts for those areas indicating decreases. They justify it based on the USDA estimates being more and increasing inflation, particularly since the decreases are generally small.

## Case Scenario Comparisons

Exhibit 39 shows the ten case scenarios examined. The first scenario assumes that each parent's income is equivalent to full-time, minimum wage. Scenarios 2 and 3 consider incomes slightly above minimum wage. The median earnings of workers by highest educational attainment and gender are the basis of case scenarios 4-8. Earnings are reported for five levels of educational attainment for Georgia workers by the U.S. Census 2019 American Community Survey. ${ }^{109}$ Male median earnings are used as the incomes of the obligated parent in the scenarios and female median earnings are used for the receiving party's income. ${ }^{110}$ The last two scenarios consider high incomes. There are no adjustments to base support or deductions from income for special factors such as the cost of the child's health insurance premium or substantial shared physical custody. The last two scenarios consider high income cases.

The comparisons also consider the guidelines of neighboring states, Exhibit 40 compares selected characteristics of the states compared.

[^38]Exhibit 39: Summary of Case Scenarios for the Comparisons

| Case Scenario | Gross Monthly <br> Income of <br> Obligated <br> Parent | Gross Monthly <br> Income of <br> Receiving <br> Party |
| :---: | :---: | :---: |
| 1. Obligated parent earns $\$ 7.25$ per hour, 40 hours per week, Custodian <br> has no income | $\$ 1,257$ | $\$ 0$ |

Exhibit 41 through Exhibit 46 show the case scenario comparisons. For most scenarios, the differences between the updated estimates of child-rearing expenditures are generally small. The changes become larger for more children and more income. The first three case scenarios also illustrate the impact of the low-income adjustment in other states. For these case scenarios, the order amounts under the Alabama, Florida, North Carolina, and Tennessee guidelines are often less because of the low-income adjustment in these states. South Carolina's low-income adjustment is severely out of date so the gap between the Georgia amounts and South Carolina's amounts is not as large as it is for other states. If the obligated parent's income is below the self-support reserve in Florida, the order amount is at the court's discretion. This occurs for the first two case scenarios

## Section 5: Summary and Conclusions

Georgia is reviewing its child support guidelines. Federal and state statute requires that the guidelines be reviewed every four years. Federal regulation requires states to consider economic data on the cost of raising children, examine case file data to analyze the application of and deviation from the guidelines, consider labor market data, and consider other data: rate of orders entered by default, rate that income is imputed to the parent obligated to pay support, rate that the state's low-income adjustment is applied, and payment data.

## Major Findings

## Review of Case File Data

Commission staff coordinated with the Division of Child Support Services (DCSS) and Superior Court Clerks to sample case files to obtain the needed data. Case files were reviewed from orders established or modified in September or October, 2021 from 16 counties selected based in an algorithm developed by Dr. Rodger Tutterow, a Georgia economist, to represent a cross-section of Georgia. This resulted in 472 orders for analysis including 195 DCSS orders and 277 private (non-DCSS orders).

## Guidelines Deviations Including Deviations for Low-Income Parents

The Georgia guidelines deviation rate based on the 2021 sample was 32 percent, which is less than the deviation rate from the previous review. The decrease can be attributable to a decrease in DCSS deviations. The deviation rate among private orders was generally unchanged. The most cited deviation reason among private orders was parenting time. As a percentage of all private orders, 13 percent had a deviation for parenting time clearly stated in the order. The most cited deviation reason among DCSS orders was low income. When considering all DCSS orders, 4 percent had a deviation for low income. There were too few orders with low-income deviations to compare their payments to those orders without low-income deviations. The Georgia guidelines do not provide presumptive adjustments for parenting time or low income. Most states do.

## Income Imputation and Default Rates

The income imputation rate across private and DCSS orders was 25 percent. The rate was higher among DCSS orders. Few orders were entered by default: less than 1 percent of private orders and 6 percent for DCSS orders. Payments are generally lower when income is imputed to the noncustodial parent. There were too few default orders to compare payment data among default orders and orders not set by default.

## Other Findings from The Case File Review

Other major findings from the case file data are:

- The vast majority of child support orders cover one and two children, and less than 10 percent cover three or more children;
- There is an increase in non-parent caretakers;
- There is an increase in zero orders;
- Most private child support orders are set as part of a divorce action; and
- Most DCSS orders originated as paternity and support petitions.

## Analysis of Labor Market Data

The analysis of labor market data can inform income imputation policies. Of federal concern is the overuse of income imputation, particularly at full-time minimum wage, in state child support caseloads. Federal policy encourages the consideration of actual income; and, when income imputation is authorized, the court should consider the parent's barriers to employment (e.g., highest educational attainment and history of incarceration) and local labor market conditions.

Georgia, like the nation, has experienced many employment swings due to the Covid-19 pandemic. Georgia's unemployment rate reached a record high at the beginning of the pandemic in 2020. For those who lost their job or had their hours reduced, this may explain the uptick in income imputation among DCSS orders in the 2021 case file data. Earning and employment history is typically considered when determining income available for child support.

Today, Georgia's unemployment rate is low and there is an abundance of job openings. Still, 40-hour workweeks are not a reality for many Georgia workers. In May 2022, the average workweek in Georgia private industries was 35.1 hours. It varied by industry: it ranged from 27.2 hours in the leisure and hospitality industry to 41.5 hours per week in the construction industry. Many occupations that require few skills pay less, offer less than 40-hour workweeks, and have high turnover rates. So, not only are hours worked per week an issue to income imputation, but whether they work 52 weeks per year is another issue. This is important to child support because automatic enforcement remedies can be activated quickly when payment is past due.

## Review of Economic Evidence on the Cost of Raising Children

Federal regulation requires the consideration of economic evidence on the cost of raising children. States generally use it to assess the adequacy of their child support formula or table.

## Economic Basis of Georgia Child Support Table

Child support is calculated in Georgia using a lookup table of basic child support obligations for a range of incomes and number of children. The noncustodial parent's prorated share of the basic obligation forms the basis of the child support order. The basic obligations in the table reflect economic data on the costs of raising children in Georgia when the table was developed in 2005. The underlying economic studies of child-rearing expenditures was published in 2001-2002, and conducted by Professor David Betson, University of Notre Dame using expenditure data from families surveyed in 1996-99. An economic methodology is needed to separate the child's share of expenditures from total household expenditures because many expenses are comingled between the children and adults living in the same household (e.g., a loaf of bread and electricity for the home are consumed by both children and adults and the child's share is not readily identifiable.) Economic methodologies produce different results. Economists don't agree which methodology best measures actual child-rearing expenditures. The Georgia table is based on the average estimates of child-rearing expenditures from two different
methodologies: the Rothbarth methodology; and, the Engel methodology. Both studies were conducted by Betson.

## Analysis of Economic Data

The most recent measurements of child-rearing expenditures rely on data collected in 2013-2019. The impact of the Covid-19 pandemic on measurements may not be known for some time due to lags in data collection and analysis. This study considers measurements of child-rearing expenditure estimated from three different methodologies: the Rothbarth methodology; the Engel methodology; and the USDA methodology.

Two Rothbarth studies were published recently that use expenditure data collected from families surveyed in 2013-2019. One was conducted by Betson, the same economist who developed the estimates underlying the Georgia child support table. He found little change in the estimate for one child, but larger amounts for two and more children over time. The new Betson-Rothbarth estimates form the basis of six state guidelines (i.e., Arizona, Alabama, Iowa, Missouri, Pennsylvania, and South Dakota). The other Rothbarth study was conducted by Florida State University for Florida and has not been adopted by Florida nor any other state. The Florida-Rothbarth amounts are slightly less than the Betson-Rothbarth amounts, but their application of the Rothbarth methodology differs from Betson's application.

Engel estimates from the same data years (2013-2019) were developed by Betson for this study. They are contained in Appendix A. The Florida researchers also developed Engel estimates. Betson and the Florida researchers apply the Engel methodology differently, but arrive at very similar results. They are less than the previous Betson-Engel estimates. The decrease appears to be caused by two factors: a change in how food is measured in the underlying consumer expenditure survey; and, the fact that over time food expenditures may have become more discretionary rather than a necessity. If food is a necessity, the theory underlying the Engel estimate is more sensible than if food expenditures are discretionary.

## Other Considerations

In addition to more current economic evidence on child-rearing expenditures, the study considers changes in price levels and changes in federal and state income tax and FICA rates. Prices have increased 49 percent since the Georgia child support table was developed. This doesn't mean a 49 percent increase in the table amounts since income has also increased. Changes in payroll taxes affect how much income a parent has available for expenditures including child-rearing expenditures. Federal tax reform that became effective in 2018 generally increased spendable income particularly at high incomes.

## Findings from the Comparisons

The studies of child-rearing expenditures were compared to the current Georgia child support table. The existing Georgia child support table is less than all three measurements for:

- One child at combined incomes above $\$ 19,950$ gross per month;
- Two children at combined incomes above $\$ 5,100$ gross per month;
- Three children at combined incomes above $\$ 3,500$ gross per month; and
- Four and more children at combined incomes above $\$ 2,250$ gross per month.

Relying on the economic evidence alone, this would suggest that the child support table may be inadequate in these areas. Another factor to be considered is whether a low-income adjustment is appropriate at some of these incomes. For example, a combined income of $\$ 2,250$ gross per month would be less than the combined income of two parents with full-time, minimum wage earnings.

## CONCLUSION

This report documents Georgia's fulfillment of federal data requirements. The information will be considered by the Child Support Commission reviewing the guidelines. Not only is the Commission considering the information in this report but will also be considering information from many other sources. The Commission will submit its findings and any recommendations to the Georgia legislature. Ultimately, any changes to the child support guidelines are made through the legislative process.

[^12]:    33 This is how it was reported in the 2018 report, so it is reported the same way for the 2021 sample for consistency. This approach excludes orders in which there were zero payments. Inclusion of zero payers would bring the averages down. For the DCSS sample, the average paid would be $\$ 269$ per month instead of $\$ 350$ per month and the average compliance rate would be $59 \%$ instead of $78 \%$ if zero payers were included.

Report to U.S. Department of Health and Human Services, Office of the Assistant Secretary for Planning and Evaluation. University of Wisconsin Institute for Research on Poverty, Madison, Wisconsin.
    ${ }^{76}$ The term, "robust" in statistics is used to mean that the statistics yield good performance that are largely unaffected by outliers or sensitive to small changes to the assumptions.
    ${ }^{77}$ National Center for State Courts. (1987). Development of Guidelines for Child Support Orders, Final Report. Report to U.S. Department of Health and Human Services, Office of Child Support Enforcement, Williamsburg, Virginia.
    ${ }^{78}$ Specifically, Betson uses adult clothes, whereas others applying the Rothbarth estimator use adult clothing, alcohol and tobacco regardless whether expenditures are made on these items. Betson has conducted sensitivity analysis and found little difference in using the alternative definitions of adult goods.

[^23]:    ${ }^{80}$ See pages 97-100 of Rodgers (2017).
    ${ }^{81}$ The Engel curve is not to be confused with the Engel method for estimating child-rearing expenditures; albeit, the same economist developed them. To be clear, the Engel curve can be applied to any economic good, not just a good relating to the estimating of child-rearing measurements.
    ${ }^{82}$ The Engel curve is an alternative way to look at demand for a particular economic good. The ordinary demand curve examines the relationship between quantity demanded of an economic good and the price of that economic good holding income constant. The classic use of the Engel curve examines the relationship between quantity demanded of an economic good and income holding price of that economic good constant. Betson's application of the Engel curve uses total expenditures rather than income.
    ${ }^{83}$ See page 92 of Rodgers (2017).
